우리Itexamdump에서는 끊임없는 업데이트로 항상 최신버전의CWNP인증CWDP-305시험덤프를 제공하는 사이트입니다, 만약 덤프품질은 알아보고 싶다면 우리Itexamdump 에서 무료로 제공되는 덤프일부분의 문제와 답을 체험하시면 되겠습니다, Itexamdump 는 100%의 보장 도를 자랑하며CWDP-305시험은 한번에 패스할 수 있는 덤프입니다.

CWNP CWDP-305 시험요강:

주제	소개
주제 1	Define Specifications for the WLAN: This section of the exam measures the skills of a Wireless Network Planner and focuses on gathering business and technical requirements needed for designing wireless LANs. It includes understanding user needs, regulatory and safety constraints, and environmental factors. Candidates are expected to identify critical elements such as coverage, capacity, security, and device compatibility, and to analyse existing infrastructure and documentation to ensure a successful design strategy.
주제 2	Design the WLAN: This section of the exam measures the skills of a WLAN Design Engineer and covers the process of selecting configurations, architecture types, and wireless components to meet business and technical requirements. It includes using design software, selecting access points and antennas, and applying methodologies such as predictive or measured design. Candidates must demonstrate the ability to produce effective documentation and configure features like QoS, roaming security, and network services for different types of client devices and applications.
주제 3	Validate and Optimize the WLAN: This section of the exam measures the skills of a WLAN Optimization Specialist and assesses the ability to test, validate, and fine-tune wireless networks post-deployment. Key tasks include RF validation surveys, performance testing, troubleshooting connectivity and security issues, and applying appropriate physical or RF adjustments. It also involves client testing and final project handover, including documentation, knowledge transfer, and meetings to ensure long-term WLAN success.
주제 4	Deploy the WLAN: This section of the exam measures the skills of a WLAN Implementation Specialist and involves overseeing the deployment phase of wireless networks. It focuses on understanding deployment procedures for various WLAN architectures, configuring supporting infrastructure, and verifying proper installation. The section also addresses physical installation checks, documentation handover, and quality assurance practices during ongoing installations.

높은 직종율을 자랑하는 CWDP-305참고자료 덤프는 Certified Wireless Design Professional 100% 시험패스 보장

Itexamdump는 많은 분들이CWNP인증CWDP-305시험을 응시하여 성공하도록 도와주는 사이트입니다Itexamdump의 CWNP인증CWDP-305 학습가이드는 시험의 예상문제로 만들어진 아주 완벽한 시험자료입니다. CWNP인증CWDP-305시험은 최근 가장 인기있는 시험으로 IT인사들의 사랑을 독차지하고 있으며 국제적으로 인정해주는 시험이라 어느 나라에서 근무하나 제한이 없습니다. Itexamdump로 여러분은 소유하고 싶은 인증서를 빠른 시일내에 얻게 될것입니다.

최신 CWDP Wi-Fi Design CWDP-305 무료샘플문제 (Q80-Q85):

질문 # 80

ABC Manufacturing has a heavily-used dual-band (2.4 / 5 GHz) WLAN, but sporadic RF interference across the 2.4 GHz band is causing dropped VoWiFi calls and leading to data connectivity and throughput problems.

In addition to avoiding 2.4 GHz channels and installing a distributed spectrum analyzer to locate RF interference sources, what should the implementer do to resolve the problem fully?

- A. Implement WPA-PSK everywhere in the network.
- **B. Move all corporate data clients and VoWiFi devices to the 5 GHz channels appropriate for their regulatory domain.**
- C. Use captive portals for guest authentication in 5 GHz.
- D. Have only guest access on the 5 GHz channels.

정답: B

설명:

Comprehensive and Detailed Explanation:

The 5 GHz band offers more non-overlapping channels and is less susceptible to interference compared to the 2.4 GHz band. By moving corporate data clients and VoWiFi devices to the 5 GHz band, the network can achieve better performance and reduced interference, especially for latency-sensitive applications like voice over Wi-Fi.

질문 # 81

You are designing a WLAN and have been asked to recommend a security solution for the network. The organization requires that 802.1X/EAP be implemented, but they do not have a PKI and do not wish to deploy one. They suggest that mostly Windows clients, Apple phones, and Android phones will be used. What do you recommend?

- A. Use FAP-TLS for the authentication solution.
- B. Use TKIPRC4 with a PSK.
- C. Use CCMP AES with a PSK.
- **D. Use EAP-PEAP for the authentication solution.**

정답: D

질문 # 82

What is the purpose of a Physical Installation Guide document?

- **A. To provide clear instructions on the locations and mounting methods, and possible configuration steps for APs.**
- B. To prove that the WLAN meets the organization's requirements.
- C. To provide sources for purchasing the equipment needed to implement the WLAN.
- D. To inform the install technicians of WLAN frame exchanges and communication methods.

정답: A

설명:

The Physical Installation Guide is developed during the design phase and delivered to the installation team. It contains detailed AP locations (including mounting heights and orientations), cabling instructions, hardware installation standards, and any specific AP configuration notes needed during physical deployment.

From CWDP-305:

"A Physical Installation Guide provides specific instructions to installers, such as mounting height, orientation, and any environmental considerations. This ensures that APs are installed correctly and according to the design."

질문 # 83

When deploying an Enterprise-class VoWLAN infrastructure, which Access Category (AC) must be used to prioritize voice packets and ensure optimal performance?

- A. AC_VO
- B. AC_VI
- C. AC_BK
- D. AC_BE

정답: A

설명:

In Wi-Fi networks, the IEEE 802.11e amendment introduces Quality of Service (QoS) features, allowing traffic to be categorized into different Access Categories (ACs) to prioritize data transmission. For Voice over WLAN (VoWLAN) applications, it is crucial to prioritize voice traffic to ensure low latency and jitter. The AC_VO (Voice Access Category) is designated for this purpose, providing the highest priority over other traffic types.

Implementing AC_VO ensures that voice packets are transmitted with minimal delay, which is essential for maintaining call quality in enterprise environments.

질문 # 84

You are validating client association capabilities to an 802.1X/EAP secure SSID. The RADIUS server's IP address is 10.100.50.25, and the default RADIUS authentication port is being used. None of the clients can associate with the SSID. After verifying that both the server and the RADIUS service are operational, you find that the authenticator (such as the AP or controller) is not communicating properly with the RADIUS server. What is your next troubleshooting step?

- A. Verify that the shared secret between the authenticator and the RADIUS server is the correct
- B. Reboot the clients to empty the shared secret cache
- C. Reboot the server to empty the shared secret cache
- D. Restart the RADIUS service to empty the shared secret cache

정답: A

질문 # 85

.....

인재도 많고 경쟁도 많은 이 사회에, 업계인재들은 인기가 아주 많습니다. 하지만 팽팽한 경쟁률도 무시할 수 없습니다. 많은 CWNP인재들도 어려운 인증시험을 패스하여 자기만의 자리를 지키고 있습니다. 우리 Itexamdump에서는 마침 전문적으로 이러한 CWNP인사들에게 편리하게 시험을 CWDP-305패스할 수 있도록 유용한 자료들을 제공하고 있습니다.
