We are so proud that we own the high pass rate to 99%. This data depend on the real number of our worthy customers who bought our Mule-Con-201 Study Guide and took part in the real Mule-Con-201 exam. Obviously, their performance is wonderful with the help of our outstanding Mule-Con-201 learning materials.

Salesforce Certified MuleSoft Catalyst Consultant Sample Questions (Q66-Q71):

NEW QUESTION # 66

What is a reasonable indication that a project engagement does not align with the Catalyst approach?

- A. A very low number of consumed assets from Anypoint Exchange in a 6-12-month time frame since engagement inception
- B. An increasing trend in the number of System APIs deployed to production during the last two quarters
- C. There is no one serving as the SecOps lead in the Center for Enablement (C4E) team during the service engagement
- D. No Severity-1 or Severity-2 service-related incident events are observed 6-12 months from engagement inception

Answer: A

NEW QUESTION # 67

In the context of the Catalyst approach, which activity is typically part of establishing a Center for Enablement (C4E)?

- A. Building and publishing foundational assets
- B. Establishing change management guidelines
- C. Establishing operational performance guidelines
- D. Defining an incident communication strategy

Answer: A

NEW QUESTION # 68

How does architecting on top of a digital platform benefit projects?
(Choose Two)

- A. It creates dependency on a single technology.
- B. It enables better scalability.
- C. It restricts access to modern technologies.
- D. It leverages existing digital capabilities.

Answer: B,D

NEW QUESTION # 69

An architect is designing APIs to be used by e-commerce channels. The current design for the Shopping Cart API has a direct query to the inventory system's data store to check for available inventory before an item can be added to the cart. The inventory system has recently been updated and has sufficient capacity to respond to predicted volumes of inventory queries in a timely manner. The Shopping Cart API is not the only application that interacts with the inventory system. The architect is aware that the inventory system also broadcasts inventory update messages to the enterprise messaging system (available via a JMS topic). What pragmatic design change can be made to make the Shopping Cart API more composable?

- A. Add an Inventory Update Notification API that consumes inventory update messages from the JMS topic and updates an in-memory cache of inventory levels that is stored in a new Inventory System API; update the Shopping Cart API to query the Inventory System API for all inventory queries
- **B. Add an Inventory System API to the design to encapsulate all inventory queries, replace the direct query to the inventory data source from the Shopping Cart API with a call to the Inventory System API instead**
- C. Add in-memory caching to the inventory lookup in the Shopping Cart API implementation to reduce queries to the backend inventory system and improve response times for the Shopping Cart API
- D. Subscribe to receive inventory update messages (from the JMS topic) and maintain in-memory inventory levels in the Shopping Cart API so that queries to the external inventory system can be completely removed from the design

Answer: B

NEW QUESTION # 70

What is an effective way to resolve common objections to a Catalyst approach?

- A. Dismissing objections as irrelevant
- **B. Understanding and addressing the underlying concerns**
- C. Limiting communication to avoid further objections
- D. Forcing compliance through authority

Answer: B

NEW QUESTION # 71

.....
