

# Free ACD201 pdf torrent & Appian ACD201 exam answers & ACD201 vce dumps

BTW, DOWNLOAD part of TorrentValid ACD201 dumps from Cloud Storage: <https://drive.google.com/open?id=1fN-Xlc7KAgewP5LukrUZvi9NntW74BAC>

The Appian Senior Developer (ACD201) prep material is available in three versions. ACD201 Practice exams and PDF questions are available at TorrentValid so that users can meet their training needs and pass the Appian Senior Developer (ACD201) exam on the first try. The philosophy of TorrentValid behind offering Appian Senior Developer (ACD201) prep material in three formats is helping students meet their unique learning needs.

## Appian ACD201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Application Design and Development: This section of the exam measures the skills of Appian Developers and covers translating business requirements into user stories, building end-to-end applications, managing object security, applying design best practices, and ensuring user-centric experiences through proper UX design.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Advanced Appian Concepts: This section of the exam measures the skills of Solution Architects and covers creating and configuring authentication methods, setting up integration objects, designing APIs, evaluating smart services and plug-ins, and applying SSO mechanisms with SAML and LDAP.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Data Management: This section of the exam measures the skills of Solution Architects and covers designing and documenting data models, recommending record types for optimization and security, working with relational data, and implementing complex models with supporting objects.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Performance and Scalability: This section of the exam measures the skills of Appian Developers and covers designing performant components, building memory-efficient models, conducting database load and automated testing, analyzing server memory and logs for risks, and resolving performance concerns for end users.</li> </ul>

## ACD201 Vce Files | Reliable ACD201 Exam Tips

Do you want to spend the least time to pass your exam? If you do, then we will be your best choice. ACD201 training materials are compiled by experienced experts who are quite familiar with the exam center, so the quality can be guaranteed. In addition, ACD201 exam materials contain most of the knowledge points for the exam, and you can have a good command of these knowledge points through practicing. In order to strengthen your confidence for the ACD201 Exam Braindumps, we are pass guarantee and money back guarantee if you fail to pass the exam. The money will be returned to your payment account.

### Appian Senior Developer Sample Questions (Q65-Q70):

#### NEW QUESTION # 65

You're designing a process used to notify multiple users of marketing campaigns. These campaigns occur infrequently, but are sent out to the hundreds of customers that are stored in your app.

How should you best design your process model to send the emails whilst using a common email process model (CMN\_SendEmail), to be most performant?

The outputs of this node are not required for the main process.

- A. Set "CMN-SendEmail" as a synchronous "Subprocess" node and select "Automatically run multiple instances of this node" for all the users that are on the mailing list.
- **B. Set "CMN\_SendEmail" as a "Start Process" process node and select "Automatically run multiple instances of this node" for all the users that are on the mailing list.**
- C. Set "CMN\_SendEmail" as an asynchronous "Subprocess" node and select "Automatically run multiple instances of this node" for all the users that are on the mailing list.

**Answer: B**

Explanation:

Using "Start Process" as the node type and enabling "Automatically run multiple instances of this node" for all users on the mailing list launches each email as a separate, lightweight process, maximizing performance and scalability, especially since the main process does not require the outputs.

#### NEW QUESTION # 66

You're developing a record view for a case management system that enables users to upload files to a specific location within an external records application.

Your requirements are:

In this record view, there should be a record action that allows the user to upload a file to the interface and configure the metadata (name, author, file size) before submitting.

If the file is larger than 250MB, the user will be notified that the file will be uploaded overnight.

Once the file has been successfully uploaded, the file will appear on the record view and the user can interact with the file.

Which two pieces of user-facing information must be captured from this business process so that you can develop this record view? (Choose two.)

- **A. The location of where the file will be uploaded to in the external records application.**
- B. The time of file upload if the file is less than 250MB.
- **C. How the user wishes to interact with these files in the record view - as a grid or a series of card layouts.**
- D. The email of the system administrator so that an email can be sent to them if the integration fails.

**Answer: A,C**

Explanation:

You need to know the target location in the external records application to properly upload the file.

Understanding how users want to interact with files (grid or card layout) is essential for designing the record view interface.

#### NEW QUESTION # 67

The synced record Task has a self-referential relationship defined in the column parentTaskId. There is a many-to-one record relationship between the id and parentTaskId called parentTask.

For a given task ID, you need to return the task name and the parent task name.

What should you do?

- A. Create a sync-time custom record field on the Task record called parentName. Specify this field to return in the query field selection.
- **B. Use a!queryRecordType() with a filter on the task id, with fields specified to return recordType!Task.name and recordType!Task.parentTask.name.**
- C. Use a!queryRecordType() filtered on the task id once to return the task name and parent task ID. Query the record again to return the parent task name.

**Answer: B**

Explanation:

Using a!queryRecordType() with a filter on the task ID and specifying both recordType!Task.name and recordType!Task.parentTask.name in the fields will efficiently return both the task name and its parent task name in a single query.

### NEW QUESTION # 68

You need to add test cases to an existing expression rule in the system. Expression rule gives a complex data type value as an output result.

The test case should pass only when a field in the resultant data matches with a specific value mentioned.

How should you configure the test case assertion?

- A. Test output matches the asserted output.
- B. Test completes without errors.
- **C. Assertion expression evaluates to True.**

**Answer: C**

Explanation:

Configuring the test case assertion so that the assertion expression evaluates to True allows you to specifically check whether the desired field in the complex data type result matches the required value.

### NEW QUESTION # 69

Which two items are configured in the Admin Console when you create a web API? (Choose two.)

- A. Access Control Policies
- B. LDAP Authentication
- **C. Service Account**
- **D. API Key**

**Answer: C,D**

Explanation:

API Keys are configured in the Admin Console to control and secure access to web APIs.

Service Accounts are managed in the Admin Console to allow external systems to authenticate and call the web APIs.

### NEW QUESTION # 70

.....

Reliable Appian Senior Developer ACD201 Dumps Questions and dumps ebook make your career more successful. Appian provides updated, free reliable Appian Senior Developer dumps free download. And the Appian Senior Developer Appian Senior Developer price is affordable. With 365 days updates. It works with all operating systems like Linux, Windows, Android, Mac, and IOS, etc.
