Salesforce Certified Platform App Builder certification is ideal for developers, system administrators, business analysts, and technical architects who want to enhance their career prospects in the Salesforce ecosystem.

Salesforce Certified Platform App Builder Sample Questions (Q142-Q147):

NEW QUESTION # 142
Universal Containers is using SF to manage travel requests. They would like to enable managers to approve travel requests via e-mail.
What is true regarding e-mail approval responses?

- A. Approvers must click a link in the approval e-mail.
- B. If the request is rejected, the approver must add the rejection comments directly in SF.
- C. Approval Comments cannot be added in the e-mail response.

- D. Approvers must the "API Enabled" system permission.

Answer: D

NEW QUESTION # 143
AW Computing has a custom object for service plans.
A service plan needs to be associated to one and only one contact. The support manager noticed if the wrong contact is associated, the reps are unable to change the contact. The app builder already confirmed the user has correct access to the field and there are no validations associated with the service plans.
What could be causing the issue?

- A. The Allow reparenting checkbox, Child records can be reparented to other parent records after they are created, is unchecked.
- B. The Allow reparenting checkbox, Child records can be reparented to other parent records after they are created, is checked.
- C. The Read/Write radio button, Allows users with at least Read/Write access to the Master record to create, edit, or delete related Detail records, is selected.
- D. The Read Only radio button, Allows users with at least Read access to the Master record to create, edit, or delete related Detail records, is selected.

Answer: A

Explanation:
The issue described occurs due to the settings in the master-detail relationship. Specifically:
* The Allow reparenting checkbox, Child records can be reparented to other parent records after they are created, is unchecked (B). This setting prevents changing the parent record (contact) of a child record (service plan) once it has been set. If 'Allow reparenting' is unchecked, it restricts the ability to change the associated contact, leading to the issue observed.
The other options do not directly address the inability to change the associated contact on a service plan record. The 'Read Only' and 'Read/Write' settings (A and C) pertain to access rights to the detail records based on the master record's access but do not affect the ability to reparent a record.
For a detailed understanding of master-detail relationships and their settings, including reparenting, see the Salesforce documentation on relationships:

NEW QUESTION # 144
What type of field can be used to filter a Report Chart that has been added to a Page Layout?

- A. Name Field
- B. Matching ID Field
- C. Formula Field
- D. Standard Field

Answer: B

NEW QUESTION # 145
Universal Containers has created two custom objects called Seminars and Attendees. Organization-wide defaults for those objects have been set to private. Universal Containers wants to set up a new junction object between these objects. A select group of users should be able to edit records in the junction object.
Which two steps should an app builder take to configure the proper security?

- A. Set lookup filters on both junction object relationship fields.
- B. Create owner-based sharing rules that give Read access to the master objects.
- C. Set Sharing Settings to Read Only on both master-detail relationship fields.
- D. Create an owner-based sharing rule that gives Read access to the junction object.

Answer: A,B

NEW QUESTION # 146

What is a key consideration when using unmanaged packages? Choose 2 answers

- A. A namespace is required to create an unmanaged package.
- B. The person who created the unmanaged package has no control over the installed components
- C. A namespace is not required to create an unmanaged package.
- D. The person who created the unmanaged package can change or update installed components

Answer: B,C

Explanation:

Explanation - Namespaces are not used in unmanaged packages. In fact, even if your organization is namespace, the namespace is removed from all components when it is uploaded as an unmanaged package.

https://developer.salesforce.com/page/An_Introduction_to_Packaging

Once the components are installed from an unmanaged package, the components can be edited in the organization they are installed in. The developer who created and uploaded the unmanaged package has no control over the installed components, and can't change or upgrade them.
