

# SC-100 Reliable Exam Online - SC-100 Pass4sure Pass Guide

P.S. Free & New SC-100 dumps are available on Google Drive shared by TorrentVCE: <https://drive.google.com/open?id=1PBZYadZq9uzZG5tKebVpuA1fdBUhH9WV>

Elaborately designed and developed SC-100 test guide as well as good learning support services are the key to assisting our customers to realize their dreams. Our SC-100 study braindumps have a variety of self-learning and self-assessment functions to detect learners' study outcomes, and the statistical reporting function of our SC-100 Test Guide is designed for students to figure out their weaknesses and tackle the causes, thus seeking out specific methods dealing with them. Our SC-100 exam guide have also set a series of explanation about the complicated parts certificated.

The SC-100 exam is designed to test the candidate's knowledge and skills in several key areas related to cybersecurity architecture. These areas include security management, identity and access management, data and application protection, and network security. SC-100 exam consists of multiple-choice questions, case studies, and scenarios that test the candidate's ability to apply their knowledge to real-world situations. Passing the Microsoft SC-100 Exam is a great way to demonstrate your expertise in cybersecurity architecture and increase your career opportunities in this field.

## Microsoft SC-100 Pass4sure Pass Guide, SC-100 Real Sheets

According to the needs of all people, the experts and professors in our company designed three different versions of the SC-100 certification training dumps for all customers. The three versions are very flexible for all customers to operate. According to your actual need, you can choose the version for yourself which is most suitable for you to preparing for the coming exam. All the SC-100 Training Materials of our company can be found in the three versions. It is very flexible for you to use the three versions of the SC-100 latest questions to preparing for your coming exam.

## Microsoft SC-100 Certification Exam Information

- Languages: English
- The passing score: 73%
- Time Duration: 60 minutes

## Microsoft Cybersecurity Architect Sample Questions (Q161-Q166):

### NEW QUESTION # 161

You have an Azure subscription that contains multiple Azure Storage blobs and Azure Files shares.

You need to recommend a security solution for authorizing access to the blobs and shares. The solution must meet the following requirements:

- \* Support access to the shares by using the SMB protocol.
- \* Limit access to the blobs to specific periods of time.

\* Include authentication support when possible.

What should you recommend for each resource? To answer, select the options in the answer area.

NOTE: Each correct answer is worth one point.

Answer Area

Blobs:

- Account shared access signatures (SAS)
- Microsoft Entra Domain Services
- Service shared access signatures (SAS)
- User delegation shared access signatures (SAS)

Shares:

- Account shared access signatures (SAS)
- Microsoft Entra Domain Services
- Service shared access signatures (SAS)
- User delegation shared access signatures (SAS)

Answer:

Explanation:

Answer Area

Blobs:

- Account shared access signatures (SAS)
- Microsoft Entra Domain Services
- Service shared access signatures (SAS)
- User delegation shared access signatures (SAS)

Shares:

- Account shared access signatures (SAS)
- Microsoft Entra Domain Services
- Service shared access signatures (SAS)
- User delegation shared access signatures (SAS)

Explanation:

Answer Area

Blobs: Account shared access signatures (SAS)

Shares: Service shared access signatures (SAS)

### NEW QUESTION # 162

You are a security architect for a company with Microsoft Azure and Microsoft 365 subscriptions, and you recently had a ransomware attack.

After reviewing with the team, you found that while information was available to help remediate the attack, the information was not central to help contextualize the security incident, slowing down the remedial action.

Which tools can provide a central console to detect, investigate, remediate, hunt, utilize threat intelligence, and contextualize security incidents?

- A. Defender for Endpoint
- B. Microsoft Sentinel
- C. Microsoft Defender for 365 Apps
- D. Microsoft Defender for Cloud

**Answer: B**

**Explanation:**

Option A is correct because Microsoft Sentinel delivers intelligent security analytics and threat intelligence across the enterprise. With Microsoft Sentinel, you get a single solution for attack detection, threat visibility, proactive hunting, and threat response.

Option B is incorrect because Microsoft Defender for Cloud does not provide proactive hunting and threat response.

Option C is incorrect because Microsoft Defender for 365 Apps will not provide attack detection, threat visibility, proactive hunting, and threat response for Azure resources.

Option D is incorrect because Defender for Endpoint will not offer a single solution for attack detection, threat visibility, proactive hunting, and threat response.

**NEW QUESTION # 163**

Case Study 2 - Litware, inc.

**Overview**

Litware, Inc. is a financial services company that has main offices in New York and San Francisco. Litware has 30 branch offices and remote employees across the United States. The remote employees connect to the main offices by using a VPN.

Litware has grown significantly during the last two years due to mergers and acquisitions. The acquisitions include several companies based in France.

**Existing Environment**

Litware has a Microsoft Entra tenant that syncs with an Active Directory Domain Services (AD DS) forest named litware.com and is linked to 20 Azure subscriptions. Microsoft Entra Connect is used to implement pass-through authentication. Password hash synchronization is disabled, and password writeback is enabled. All Litware users have Microsoft 365 E5 licenses.

The environment also includes several AD DS forests, Microsoft Entra tenants, and hundreds of Azure subscriptions that belong to the subsidiaries of Litware.

**Requirements. Planned Changes**

Litware plans to implement the following changes:

- Create a management group hierarchy for each Microsoft Entra tenant.
- Design a landing zone strategy to refactor the existing Azure environment of Litware and deploy all future Azure workloads.
- Implement Microsoft Entra Application Proxy to provide secure access to internal applications that are currently accessed by using the VPN.

**Requirements. Business Requirements**

Litware identifies the following business requirements:

- Minimize any additional on-premises infrastructure.
- Minimize the operational costs associated with administrative overhead.

**Requirements. Hybrid Requirements**

Litware identifies the following hybrid cloud requirements:

- Enable the management of on-premises resources from Azure, including the following:
  - o Use Azure Policy for enforcement and compliance evaluation.
  - o Provide change tracking and asset inventory.
  - o Implement patch management.
- Provide centralized, cross-tenant subscription management without the overhead of maintaining guest accounts.

**Requirements. Microsoft Sentinel Requirements**

Litware plans to leverage the security information and event management (SIEM) and security orchestration automated response (SOAR) capabilities of Microsoft Sentinel. The company wants to centralize Security Operations Center (SOC) by using Microsoft Sentinel.

**Requirements. Identity Requirements**

Litware identifies the following identity requirements:

- Detect brute force attacks that directly target AD DS user accounts.
- Implement leaked credential detection in the Microsoft Entra tenant of Litware.
- Prevent AD DS user accounts from being locked out by brute force attacks that target Microsoft Entra user accounts.
- Implement delegated management of users and groups in the Microsoft Entra tenant of Litware, including support for:
  - o The management of group properties, membership, and licensing
  - o The management of user properties, passwords, and licensing
  - o The delegation of user management based on business units

**Requirements. Regulatory Compliance Requirements**

Litware identifies the following regulatory compliance requirements:

- Ensure data residency compliance when collecting logs, telemetry, and data owned by each United States- and France-based

subsidiary.

- Leverage built-in Azure Policy definitions to evaluate regulatory compliance across the entire managed environment.
- Use the principle of least privilege.

Requirements. Azure Landing Zone Requirements

Litware identifies the following landing zone requirements:

- Route all internet-bound traffic from landing zones through Azure Firewall in a dedicated Azure subscription.
- Provide a secure score scoped to the landing zone.
- Ensure that the Azure virtual machines in each landing zone communicate with Azure App Service web apps in the same zone over the Microsoft backbone network, rather than over public endpoints.
- Minimize the possibility of data exfiltration.
- Maximize network bandwidth.

The landing zone architecture will include the dedicated subscription, which will serve as the hub for internet and hybrid connectivity.

Each landing zone will have the following characteristics:

- Be created in a dedicated subscription.
- Use a DNS namespace of litware.com

Requirements. Application Security Requirements

Litware identifies the following application security requirements:

- Identify internal applications that will support single sign-on (SSO) by using Microsoft Entra Application Proxy.
- Monitor and control access to Microsoft SharePoint Online and Exchange Online data in real time.

Hotspot Question

You need to recommend an identity security solution for the Microsoft Entra tenant of Litware.

The solution must meet the identity requirements and the regulatory compliance requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

For the delegated management of users and groups, use:

- AD DS organizational units
- Microsoft Entra administrative units
- Custom Microsoft Entra roles

To ensure that you can perform leaked credential detection:

- Enable password hash synchronization in the Microsoft Entra Connect deployment
- Enable Security defaults in the Microsoft Entra tenant of Litware
- Replace pass-through authentication with Active Directory Federation Services

**Answer:**

Explanation:

**Answer Area**

For the delegated management of users and groups, use:

- AD DS organizational units
- Microsoft Entra administrative units
- Custom Microsoft Entra roles

To ensure that you can perform leaked credential detection:

- Enable password hash synchronization in the Microsoft Entra Connect deployment
- Enable Security defaults in the Microsoft Entra tenant of Litware
- Replace pass-through authentication with Active Directory Federation Services

Explanation:

Box 1: Microsoft Entra administrative units

Implement delegated management of users and groups in the Microsoft Entra tenant of Litware, including support for:

- \* The delegation of user management based on business units

Without Microsoft Entra administrative units, assigning a user to the User Administrator role in Microsoft Entra ID gives them rights to manage all Microsoft Entra users. With administrative units, the user is delegated the same role, User Administrator, but that role only applies to the specified administrative unit. The administrative unit contains the users and groups that are under the scope of management.

Box 2: Enable password hash synchronization in the Microsoft Entra Connect deployment Existing environment: Microsoft Entra Connect is used to implement pass-through authentication..

synchronization

**NEW QUESTION # 164**

You have a Microsoft 365 E5 subscription and an Azure subscription. You need to evaluate the existing environment to increase the overall security posture for the following components:

- \* Windows 11 devices managed by Microsoft Intune
- \* Azure Storage accounts
- \* Azure virtual machines

What should you use to evaluate the components? To answer, select the appropriate options in the answer area.

**Answer Area**

Windows 11 devices: Microsoft 365 compliance center, Microsoft 365 Defender, Microsoft Defender for Cloud, Microsoft Sentinel

Azure virtual machines: Microsoft 365 compliance center, Microsoft 365 Defender, Microsoft Defender for Cloud, Microsoft Sentinel

Azure Storage accounts: Microsoft 365 compliance center, Microsoft 365 Defender, Microsoft Defender for Cloud, Microsoft Sentinel

**Answer:**

**Explanation:**

**Answer Area**

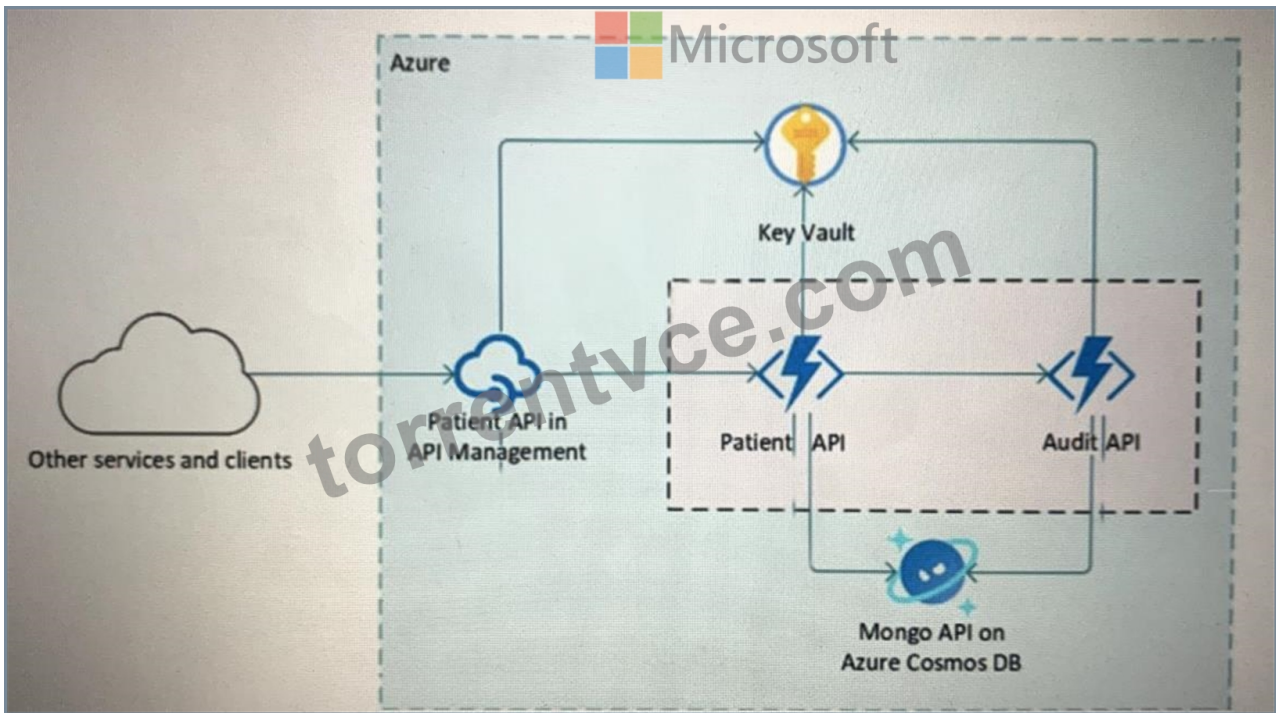

Windows 11 devices: Microsoft 365 compliance center, Microsoft 365 Defender, Microsoft Defender for Cloud, Microsoft Sentinel

Azure virtual machines: Microsoft 365 compliance center, Microsoft 365 Defender, Microsoft Defender for Cloud, Microsoft Sentinel

Azure Storage accounts: Microsoft 365 compliance center, Microsoft 365 Defender, Microsoft Defender for Cloud, Microsoft Sentinel

**NEW QUESTION # 165**

Your company is developing a serverless application in Azure that will have the architecture shown in the following exhibit.

You need to recommend a solution to isolate the compute components on an Azure virtual network. What should you include in the recommendation?

- A. an Azure Active Directory (Azure AD) application proxy
- B. Azure service endpoints
- C. Azure Active Directory (Azure AD) enterprise applications
- **D. an Azure App Service Environment (ASE)**

**Answer: D**

Explanation:

Explanation

App Service environments (ASEs) are appropriate for application workloads that require:

Very high scale, Isolation and secure network access, High memory utilization. This capability can host your:

Windows web apps, Linux web apps

Docker containers, Mobile apps

Functions
