準備するApple DEP-2025試験は簡単に一番いいDEP-2025テスト模擬問題集: Apple Deployment and Management Exam

当社のDEP-2025学習教材には、ユーザーのすべての要件を基本的に満たす多くの利点があります。試用期間中に良いコメントや提案がある場合は、タイムリーにフィードバックをお寄せください。私たちのDEP-2025学習資料はあなたに利益をもたらします、私たちはユーザーの利益のためにそれをすべてします。DEP-2025トレーニング資料の合格率は99%~100%であり、これはLoaylのお客様から証明されており、次のメリットが得られます。DEP-2025練習ファイルは、ご参加をお待ちしております。

Apple DEP-2025 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"> Device Support: This section of the exam measures the skills of an IT Administrator and covers troubleshooting Mac startup, recovery, and password reset processes using macOS Recovery. It ensures support professionals can maintain and restore device functionality.
トピック 2	<ul style="list-style-type: none"> Manage Content and Data Flow: This section of the exam measures the skills of an IT Administrator and covers app distribution methods including managed, custom, and proprietary apps. It focuses on content purchasing and delivery through Apple Business or School Manager.
トピック 3	<ul style="list-style-type: none"> Plan a Deployment: This section of the exam measures the skills of an MDM Specialist and covers the purpose and function of Apple's built-in MDM framework. It evaluates the foundational understanding needed to support the deployment of Apple devices at scale using MDM protocols and tools.
トピック 4	<ul style="list-style-type: none"> Software Updates: This section of the exam measures the skills of an MDM Specialist and covers update management strategies using MDM. It includes handling deadlines, updating behavior, and ensuring that updates are properly delivered and installed.
トピック 5	<ul style="list-style-type: none"> Device Enrollment: This section of the exam measures the skills of an MDM Specialist and covers the three main enrollment methods for Apple devices, their core concepts, and their properties. It prepares candidates to make appropriate choices based on organizational needs.
トピック 6	<ul style="list-style-type: none"> Planning Device Ownership and Enrollment: This section of the exam measures the skills of an IT Administrator and covers enrollment planning strategies based on ownership models. It focuses on data separation and appropriate deployment paths based on user and organizational requirements.
トピック 7	<ul style="list-style-type: none"> Apple Business Manager and Apple School Manager: This section of the exam measures the skills of an MDM Specialist and covers managing connections to resellers and managing device suppliers. It emphasizes the use of Apple Business Manager or School Manager to streamline large-scale deployments.
トピック 8	<ul style="list-style-type: none"> Device Configuration: This section of the exam measures the skills of an IT Administrator and covers declarative configuration properties and how they relate to the device enrollment type. It ensures that configurations align with organizational needs.
トピック 9	<ul style="list-style-type: none"> Network Integration: This section of the exam measures the skills of an IT Administrator and covers assessing network responsiveness and device connectivity. It also covers wireless auto-join behavior on Apple devices and ensures strong network coverage.
トピック 10	<ul style="list-style-type: none"> Apple Configurator: This section of the exam measures the skills of an IT Administrator and covers the usage of Apple Configurator in enrollment, supervision, and deployment of Apple devices. It includes an overview of its features and setup processes.
トピック 11	<ul style="list-style-type: none"> Device Security: This section of the exam measures the skills of an MDM Specialist and covers encryption on Apple platforms, FileVault operations, and the importance of key management. It focuses on protecting sensitive data on managed devices.
トピック 12	<ul style="list-style-type: none"> Prepare Your Environment: This section of the exam measures the skills of an IT Administrator and covers the important factors involved in evaluating and preparing the environment for a successful MDM implementation. It emphasizes strategic planning before rollout.

Apple Deployment and Management Exam 認定 DEP-2025 試験問題 (Q10-Q15):

質問 # 10

What do you need for account-driven User Enrollment?

- A. A Managed Apple Account
- B. An enrollment certificate assigned to the account
- C. A personal Apple Account with a signed enrollment profile
- D. An enrollment profile from a customized URL, mail message, or other means

正解: A

解説:

Apple's User Enrollment workflow is specifically designed for BYOD scenarios, and account-driven User Enrollment makes this even simpler. Apple Learning specifies that the required element is a Managed Apple Account issued through Apple Business Manager or Apple School Manager. When a user signs into Settings with their Managed Apple Account, the iOS or iPadOS device automatically recognizes the account type and begins the enrollment process. This streamlines the workflow by removing the need for downloaded configuration profiles or certificates. Unlike Device Enrollment, User Enrollment establishes a cryptographically separated environment where organizational data and personal data remain isolated. This balance gives IT control of apps, calendars, and email while protecting the user's privacy. Thus, the Managed Apple Account is the key to enabling account-driven User Enrollment.

References: Apple Platform Deployment - "User Enrollment with Managed Apple Accounts."

質問 # 11

What's required to set up Shared iPad?

- A. An MDM solution
- B. User Enrollment
- C. A VPN configuration
- D. Apple Configurator

正解: A

解説:

Setting up Shared iPad requires an MDM solution to configure the feature, assign Managed Apple IDs, and manage user sessions. The MDM applies a configuration profile specifying Shared iPad settings (e.g., temporary session mode or user-specific logins) and integrates with Apple School Manager or Apple Business Manager. Apple Configurator (option B) can supervise devices but isn't required for Shared iPad setup. User Enrollment (option C) is for BYOD, not shared devices. A VPN configuration (option D) is unrelated. The Apple Platform Deployment Guide mandates MDM for Shared iPad deployment.

質問 # 12

Which of these is a valid consideration when organizations buy content in Apple Business Manager?

- A. Content is automatically assigned to user accounts.
- B. Licenses for purchased apps can be transferred to another location.
- C. Organizations must negotiate a license directly with the publisher when buying free content.
- D. Only IT administrators can make purchases on behalf of the organization.

正解: B

解説:

Licenses can be transferred within an organization. The Apple Business Manager User Guide states, "Licenses for purchased apps can be transferred to another location within the same organization in Apple Business Manager." Options B, C, and D are incorrect as free content doesn't require negotiation, assignment isn't automatic, and multiple roles can purchase.

References:

Apple Business Manager User Guide, "Manage Licenses" section.

Apple Platform Deployment Guide, "Content Management" section.

質問 # 13

How do devices report their status when using declarative device management?

- A. Profiles
- **B. The status channel**
- C. Declarations

正解: B

解説:

Declarative Device Management (DDM), introduced by Apple, allows devices to autonomously manage their configurations based on declarations provided by the MDM server. When reporting their status back to the MDM server, devices use the status channel, a dedicated communication pathway designed for this purpose. Declarations (option A) are instructions sent from the MDM server to the device, not the mechanism for reporting status. Profiles (option C) are used in traditional MDM to configure devices but are not specific to status reporting in DDM. Apple's MDM Protocol Reference explains that the status channel enables devices to send updates about their compliance and configuration state, confirming B as the correct answer.

質問 # 14

Which setting is required for automatic proxy configuration when you configure the Global HTTP Proxy payload?

- **A. Proxy type**
- B. User name and password
- C. Port
- D. Proxy server URL

正解: A

解説:

When deploying a Global HTTP Proxy payload, the required field to enable automatic proxy configuration is the Proxy type. Apple documentation specifies that administrators must set this field to either "Manual" or "Auto." If "Auto" is selected, the device will automatically fetch and apply the proxy settings from a PAC (Proxy Auto-Configuration) file. While fields like URL or Port may be needed depending on the type, the fundamental requirement that determines how the proxy is applied is the Proxy type itself. Without this configuration, the device cannot distinguish between a manual or automatic proxy setup.
