적중율 높은 NSE8_812인기자격증 시험대비 덤프문제 시험덤프

많은 사이트에서 Fortinet인증 NSE8_812시험대비덤프를 제공해드리는데KoreaDumps를 최강 추천합니다. KoreaDumps의Fortinet인증 NSE8_812덤프에는 실제시험문제의 기출문제와 예상문제가 수록되어있어 그 품질 하나

끝내줍니다.적중을 좋고 가격저렴한 고품질 덤프는KoreaDumps에 있습니다.

최신 Fortinet Network Security Expert NSE8_812 무료샘플문제 (Q96-Q101):

질문 # 96

Refer to the exhibit showing a FortiSOAR playbook.

You are investigating a suspicious e-mail alert on FortiSOAR, and after reviewing the executed playbook, you can see that it requires intervention.

What should be your next step?

- A. Go to the Incident Response tasks dashboard and run the pending actions
- B. Click on the notification icon on FortiSOAR GUI and run the pending input action
- C. Run the Mark Drive by Download playbook action
- D. Reply to the e-mail with the requested Playbook action

정답: A

설명:

The exhibited playbook requires intervention, which means that the playbook has reached a point where it needs a human operator to take action. The next step should be to go to the Incident Response tasks dashboard and run the pending actions. This will allow you to see the pending actions that need to be taken and to take those actions.

The other options are not correct. Option B will only show you the notification icon, but it will not allow you to run the pending input action. Option C will run the Mark Drive by Download playbook action, but this is not the correct action to take in this case. Option D is not a valid option.

Here are some additional details about pending actions in FortiSOAR:

- * Pending actions are actions that need to be taken by a human operator.
- * Pending actions are displayed in the Incident Response tasks dashboard.
- * Pending actions can be run by clicking on the action in the dashboard.

질문 # 97

A retail customer with a FortiADC HA cluster load balancing five web servers in L7 Full NAT mode is receiving reports of users not able to access their website during a sale event. But for clients that were able to connect, the website works fine.

CPU usage on the FortiADC and the web servers is low, application and database servers are still able to handle more traffic, and the bandwidth utilization is under 30%.

Which two options can resolve this situation? (Choose two.)

- A. Disable SSL between the FortiADC and the web servers
- B. Add a connection-pool to the FortiADC virtual server
- C. Add more web servers to the real server pool
- D. Change the persistence rule to LB_PERSIST_SS_SESSION.

정답: B,C

설명:

Option B: Adding more web servers to the real server pool will increase the overall capacity of the load balancer, which should help to resolve the issue of users not being able to access the website.

Option D: Adding a connection-pool to the FortiADC virtual server will allow the load balancer to cache connections to the web servers, which can help to improve performance and reduce the number of dropped connections.

Option A: Changing the persistence rule to LB_PERSIST_SS_SESSION would only be necessary if the current persistence rule is not working properly. In this case, the CPU usage on the FortiADC and the web servers is low, so the persistence rule is likely not the issue.

Option C: Disabling SSL between the FortiADC and the web servers would reduce the load on the FortiADC, but it would also make the website less secure. Since the bandwidth utilization is under 30%, it is unlikely that disabling SSL would resolve the issue.

질문 # 98

A retail customer with a FortiADC HA cluster load balancing five web servers in L7 Full NAT mode is receiving reports of users not able to access their website during a sale event. But for clients that were able to connect, the website works fine.

CPU usage on the FortiADC and the web servers is low, application and database servers are still able to handle more traffic, and the bandwidth utilization is under 30%.

Which two options can resolve this situation? (Choose two.)

- A. Add more web servers to the real server pool
- B. Disable SSL between the FortiADC and the web servers
- C. Change the persistence rule to LB_PERSISTENCE_SSL_SESSION.
- D. Add a connection-pool to the FortiADC virtual server

정답: C,D

질문 # 99

You must configure an environment with dual-homed servers connected to a pair of FortiSwitch units using an MLAG. Multicast traffic is expected in this environment, and you should ensure unnecessary traffic is pruned from links that do not have a multicast listener.

In which two ways must you configure the igmps-flood-traffic and igmps-flood-report settings? (Choose two.)

- A. enable on the ISL and FortiLink trunks
- B. disable on the ISL and FortiLink trunks
- C. disable on ICL trunks
- D. enable on ICL trunks

정답: A,C

설명:

To ensure that unnecessary multicast traffic is pruned from links that do not have a multicast listener, you must disable IGMP flood traffic on the ICL trunks and enable IGMP flood reports on the ISL and FortiLink trunks.

Disabling IGMP flood traffic will prevent the FortiSwitch units from flooding multicast traffic to all ports on the ICL trunks. This will help to reduce unnecessary multicast traffic on the network.

Enabling IGMP flood reports will allow the FortiSwitch units to learn which ports are interested in receiving multicast traffic. This will help the FortiSwitch units to prune multicast traffic from links that do not have a multicast listener.

질문 # 100

Refer to the exhibit.

The Company Corp administrator has enabled Workflow mode in FortiManager and has assigned approval roles to the current administrators. However, workflow approval does not function as expected. The CTO is currently unable to approve submitted changes.

Given the exhibit, which two possible solutions will resolve the workflow approval problems with the Workflow_72 ADOM? (Choose two.)

- A. The CTO and CISO need to swap Approval Groups so that the highest authority is in Group #1.
- B. The CTO must have Standard access level or higher for FortiManager.
- C. The CTO needs to be added to "Email Notification" in the Workflow_72 ADOM.
- D. The CISO must have a higher access level than "Read_Only_User" in FortiManager.
- E. The CTO must have a defined email address for their admin user account.

정답: B,E
