

ユニークなAZ-120資格模擬一回合格-ハイパスレートのAZ-120コンポーネント

無料でクラウドストレージから最新のJPNTTest AZ-120 PDFダンプをダウンロードする：<https://drive.google.com/open?id=1vA24E6rJTxsQyGmnAH70OjZpUS0UOgc>

Planning and Administering Microsoft Azure for SAP Workloads衝動的にまたは考慮せずに何かを購入すると、望ましくない選択につながる可能性があります。その結果を防ぐために,Planning and Administering Microsoft Azure for SAP Workloadsトレーニング資料を用意しました。これらは、保証期間中の専門的な練習資料です。参考のために許容できる価格に加えて、3つのバージョンのすべての資料は、10年以上にわたってこの分野の専門家によって編集されています。さらに、一連の利点があります。したがって、Planning and Administering Microsoft Azure for SAP Workloadsの実際のテストの重要性は言うまでもありません。今すぐご注文いただいた場合、1年間無料の更新をお送りします。これらのサブリメントはすべて、Planning and Administering Microsoft Azure for SAP WorkloadsのAZ-120模擬試験にも役立ちます。

Microsoft AZ-120試験は、Azure Cloud環境でSAPワークロードを管理する専門知識を紹介したいITの専門家にとって優れた認定です。この認定は、SAPシステムの展開、Azureリソースの管理、SAPワークロードの監視など、AzureのSAPワークロードに関連するさまざまなタスクを実行するために必要なスキルと知識を検証します。この認定は、SAPシステムをAzureクラウドに移行し、システムを管理するために熟練した専門家を必要としている組織にとっても有益です。

Microsoft AZ-120 認定試験は、SAP ワークロードに対して Microsoft Azure を計画および管理する責任を持つ IT プロフェッショナルにとって必要な認定試験です。この認定試験は、候補者が Azure 上で SAP ソリューションを展開、管理、監視するための知識とスキルを証明します。この認定試験に合格することで、候補者は組織のパフォーマンス、可用性、セキュリティ要件を満たすように SAP ソリューションを設計、展開、管理する能力を証明します。

100%合格率-有効的なAZ-120資格模擬試験-試験の準備方法AZ-120コンポーネント

IT領域での主要な問題が質と実用性が欠くということを我々ははっきり知っています。JPNTTestのMicrosoftのAZ-120の試験問題と解答はあなたが必要とした一切の試験トレーニング資料を準備して差し上げます。実際の試験のシナリオと一致で、選択問題（多肢選択問題）はあなたが試験を受けるために有効な助けになります。JPNTTestのMicrosoftのAZ-120「Planning and Administering Microsoft Azure for SAP Workloads」の試験トレーニング資料は検証した試験資料で、JPNTTestの専門的な実践経験に含まれています。

この試験は、SAPワークロードのためのAzureリソース、仮想マシン、ストレージ、ネットワーキング、セキュリティの計画と実装能力を測定します。試験はまた、災害復旧、高可用性、およびAzure上でSAPワークロードの監視とトラブルシューティングなどのトピックもカバーしています。この試験に合格することで、候補者はAzure上で安全でスケーラブルなSAPソリューションを設計および展開するために必要なスキルと知識を持っていることが証明されます。

Microsoft Planning and Administering Microsoft Azure for SAP Workloads 認定 AZ-120 試験問題 (Q205-Q210):

質問 # 205

You are migrating SAP to Azure. The ASCS application servers are in one Azure zone, and the SAP database server in in a different Azure zone. ASCS/ERS is configured for high availability.

During performance testing, you discover increased response times in Azure, even though the Azure environment has better computer and memory configurations than the on-premises environment.

During the initial analysis, you discover an increased wait time for Enqueue.

What are three possible causes of the increased wait time? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. misconfigured load balancer rules and health check probes for Enqueue and ASCS
- B. network latency between the database server and the SAP application servers
- C. a missing Enqueue profile
- D. active Enqueue replication
- E. disk I/O during Enqueue backup operations

正解: A、B、D

解説:

Explanation

E: The network latency across Availability Zones is not the same in all Azure regions. In some cases, you can deploy and run the SAP application layer across different zones because the network latency from one zone to the active DBMS VM is acceptable. But in some Azure regions, the latency between the active DBMS VM and the SAP application instance, when deployed in different zones, might not be acceptable for SAP business processes.

質問 # 206

You have an on-premises SAP NetWeaver production landscape and an Azure subscription that contains the resources shown in the following table.

□ You have a 10-Gbps ExpressRoute circuit between the on-premises environment and VNet1.

You plan to migrate the landscape to Azure.

As part of the solution, you need to migrate the on-premises Oracle database to SAPSQLVM1. The solution must minimize how long it will take to complete the data migration.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

正解:

解説:

□ Explanation:

□

質問 # 207

You are planning the Azure network infrastructure to support the disaster recovery requirements.

What is the minimum number of virtual networks required for the SAP deployed?

- A. 0
- B. 1
- C. 2
- D. 3

正解: B

解説:

Explanation

Scenario: Ensure that all the production databases can withstand the failure of an Azure region.

Note: Use Azure Site Recovery to replicate applications across regions. Azure Site Recovery replicates workloads running on physical and virtual machines from a primary site (either on-premises or in Azure) to a secondary location (in Azure). When an outage occurs at the customer's primary site, a failover can be triggered to quickly return the customer to an operational state. After the primary location is restored, customers can then fail back.

Topic 2, Litware, inc Case Study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all question include on this exam in the time provided.

To answer the question included in a case study, you will need to reference information that is provided in the case study. Case studies might contain and other resources that provide information about the scenario that is describe in the case study. Each question is independent of the other question in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answer and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To Start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such the content requirements, existing environment, and problem statements, if the case study has an All Information tab, note that the information displayed its identical to the information displayed on the subsequence tabs. When you are ready to answer a question click the Question button to return to the question.

Overview

Litware, inc. is an international manufacturing company that has 3,000 employees.

Litware has two main offices. The offices are located in Miami, FL, and Madrid Spain.

Existing Environment

Infrastructure

Litware currently uses a third-party provider to host a datacenter in Miami and a disaster recovery datacenter in Chicago, it.

The network contains an Active Directory domain named litware.com. Litware has two third-party applications hosted in Azure.

Litware already implemented a site-to-site VPN connection between the on-premises network and Azure.

SAP Environment

Litware currently runs the following SAP products:

- * Enhancement Pack 6 for SAP ERP Central Component 6.0 (SAP ECC 6.0)
- * SAP Extended Warehouse Management (SAP EWM)
- * SAP Business Warehouse (SAP BW)
- * SAP NetWeaver Process Integration (PI)
- * SAP Solution Manager

All users run on the Windows Server platform. All databases use Microsoft SQL Server. Currently, you have 20 production servers.

You have 30 non-production servers including five testing servers, five development servers, five quality assurance (QA) servers, and 15 pre-production servers.

Currently, all SAP applications are in the litware.com domain.

Problem Statements

The current version of SAP ECC has a transaction that, when run in batches overnight, takes eight hours to complete. You confirm that upgrading to SAP Business Suite on HANA will improve performance because of code changes and the SAP HANA database platform.

Litware is dissatisfied with the performance of its current hosted infrastructure vendor. Litware experienced several hardware failures and the vendor struggled to adequately its 24/7 business operation.

Business Goals

Litware identifies the following business goals:

- * Increase the performance of SAP ECC application by moving to SAP HANA. All other database will remain on SQL Server.
- * Move away from the current infrastructure vendor to increase the stability and availability of the SAP services.
- * Use the new Environment, Health and Safety (EH&S) in Recipe Management function.
- * Ensure that any migration activities can be completed within a 48-hour period during a weekend.

Planned Changes

Litware identifies the following planned changes:

- * Migrate SAP to Azure.
- * Upgrade and migrate SAP ECC to SAP business Suite on HANA Enhancement Pack 8.

Technical requirements

Litware identifies the following technical requirements:

- * Implement automated backups.
- * Support load testing during the migrate.

- * Identify opportunities to reduce costs during the migration.
- * Continue to use the Litware.com domain for all SAP landscapes.
- * Ensure that all SAP applications and databases are highly available.
- * Remove all SAP components from the on-premises network once the migration is complete.
- * Minimize the purchase of additional SAP licenses. SAP HANA licenses were already purchased.
- * Ensure that SAP can provide technical support for all the SAP landscapes deployed to Azure.

質問 # 208

You have the following Azure Resource Manager template.

- ☐ For each of the following statements, select Yes if the statement is true. Otherwise, select No.
- NOTE: Each correct selection is worth one point.

正解:

解説:

☐ Explanation

Box 1: Yes

Count is 6.

Box 2: No

Mode is serial.

Box 3: NO

References:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/templates/copy-resources>

質問 # 209

You have an SAP landscape on Azure.

You plan to deploy a new SAP application server by using an Azure Resource Manager template.

You need to ensure that all new servers are deployed with Azure Disk Encryption enabled.

How should you complete the relevant component of the template? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

正解:

解説:

☐ Explanation

Graphical user interface, text, application, email Description automatically generated

☐ Box 1: extensions

Azure Disk Encryption can be enabled via Azure PowerShell or Azure CLI. That is normally seen in remediation. In a real-world scenario you would like to see a virtual machine during its creation include disk encryption process. This is technically possible thanks to Disk Encryption VM extension.

Box 2: AzureDiskEncryption

Example:

```
"type": "Microsoft.Compute/virtualMachines/extensions",
"name": "[concat(parameters('vmName'), '/diskEncryption')]",
"apiVersion": "2019-03-01",
"location": "[parameters('location')]",
"dependsOn": [
  "[resourceId('Microsoft.Compute/virtualMachines/', parameters('vmName'))]"
],
```

```
"properties": {
  "publisher": "Microsoft.Azure.Security",
  "type": "AzureDiskEncryption",
```
