New SPLK-1003 Exam Sample Questions | Efficient Splunk SPLK-1003: Splunk Enterprise Certified Admin 100% Pass

There is no exaggeration that you can be confident about your coming exam just after studying with our SPLK-1003 preparation

questions for 20 to 30 hours. Tens of thousands of our customers have benefited from our SPLK-1003 Exam Materials and passed their exams with ease. The data showed that our high pass rate is unbelievably 98% to 100%. Without doubt, your success is 100% guaranteed with our SPLK-1003 training guide.

What Next After SPLK-1003?

Passing SPLK-1003 Exam not just helps one get accredited serves as a prerequisite for other Splunk certificates. These include Splunk Enterprise Certified Architect and Splunk Certified Developer. These advanced certifications can further finetune your Splunk software skills, expanding on new areas such as building apps using Splunk Web Framework, and gaining knowledge on Splunk Deployment Methodology.

Splunk Enterprise Certified Admin Sample Questions (Q19-Q24):

NEW QUESTION # 19
Which of the following accurately describes HTTP Event Collector indexer acknowledgement?

- A. It requires a separate channel provided by the client.
- B. It can be enabled at the global setting level.
- C. It stores status information on the Splunk server.
- D. It is configured the same as indexer acknowledgement used to protect in-flight data.

Answer: B

NEW QUESTION # 20
Which of the following are methods for adding inputs in Splunk? (select all that apply)

- A. Editing monitor. conf
- B. Editing inputs. conf
- C. Splunk Web
- D. CLI

Answer: C

NEW QUESTION # 21
Which of the following apply to how distributed search works? (select all that apply)

- A. Peers run searches in parallel and return their portion of results.
- B. The search peers pull the data from the forwarders.
- C. The search head dispatches searches to the peers
- D. The search head consolidates the individual results and prepares reports

Answer: A,C,D

Explanation:
Users log on to the search head and run reports: - The search head dispatches searches to the peers - Peers run searches in parallel and return their portion of results - The search head consolidates the individual results and prepares reports

NEW QUESTION # 22
What is the order of precedence (from lowest # highest) within serverclass.conf in which attributes will be expressed?

- A. [global] # [serverClass:<name>] # [serverClass:<name>:app:<appname>]
- B. [global] # [serverClass:<name>] # [app:<appname>]
- C. [global] # [serverClass:<name>] # [serverClass:<name>:client:<client.name>]
- D. [global] # [serverClass:<name>] # [serverClass:<name>:client:<client.name>:user:<username>]

Answer: A

Explanation:
The serverclass.conf file controls how deployment apps and configurations are distributed from the Deployment Server to its Deployment Clients. Within this configuration, attribute values can be defined at multiple levels, and Splunk applies them based on a defined order of precedence - from general to most specific.
The correct order of evaluation (lowest to highest precedence) is:
* [global] - applies to all server classes and clients unless overridden.
* [serverClass:<name>] - applies to all clients in that specific server class.
* [serverClass:<name>:app:<appname>] - applies only to a specific app within that server class and overrides previous settings.
This means that values set in the [serverClass:<name>:app:<appname>] stanza take priority over those in [serverClass:<name>], which in turn override values in [global].
Example (from serverclass.conf):
[global]
whitelist.0 = *
[serverClass:web_servers]
whitelist.0 = web01*
blacklist.0 = test*
[serverClass:web_servers:app:web_monitoring]
restartSplunkWeb = true
Here, restartSplunkWeb = true in the app stanza overrides any inherited setting from the global or class level.
Reference (Splunk Documentation):
* Splunk Enterprise Admin Manual # Deploy configurations using deployment server
* serverclass.conf.spec and example # "Precedence of attributes: global < serverClass:<name> < serverClass:<name>:app: <appname>"
* Splunk Docs: "How the deployment server works"

NEW QUESTION # 23
Which of the following are reasons to create separate indexes? (Choose all that apply.)

- A. Increase number of users.
- B. Restrict user permissions.
- C. Different retention times.
- D. File organization.

Answer: B,C

Explanation:
Reference:
Different retention times: You can set different retention policies for different indexes, depending on how long you want to keep the data. For example, you can have an index for security data that has a longer retention time than an index for performance data that has a shorter retention time.
Restrict user permissions: You can set different access permissions for different indexes, depending on who needs to see the data. For example, you can have an index for sensitive data that is only accessible by certain users or roles, and an index for public data that is accessible by everyone.
