

SAP Certified - Database Administrator - SAP HANA study questions torrent & C_DBADM_2601 training study guide & SAP Certified - Database Administrator - SAP HANA practice pdf dumps

The PDF version of C_DBADM_2601 training materials supports download and printing, so its trial version also supports. You can learn about the usage and characteristics of our C_DBADM_2601 learning guide in various trial versions, so as to choose one of your favorite in formal purchase. In fact, all three versions contain the same questions and answers. You can either choose one or all three after payment. I believe you can feel the power of our C_DBADM_2601 Preparation prep in these trial versions.

If you are not aware of your problem, please take a good look at the friends around you! Now getting an international C_DBADM_2601 certificate has become a trend. If you do not hurry to seize the opportunity, you will be far behind others! Now the time cost is so high, choosing C_DBADM_2601 Exam Prep will be your most efficient choice. You can pass the C_DBADM_2601 exam in the shortest possible time to improve your strength.

Certification SAP C_DBADM_2601 Test Answers - C_DBADM_2601 Actual Questions

Are you aiming to ace the SAP C_DBADM_2601 exam on your first attempt? Look no further! Pass4Success provides updated SAP Certified - Database Administrator - SAP HANA (C_DBADM_2601) exam questions that will help you succeed. In today's competitive job market, obtaining the SAP C_DBADM_2601 Certification is essential for securing high-paying jobs and promotions. Don't waste your time and money studying outdated C_DBADM_2601 practice test material. Prepare with actual C_DBADM_2601 questions to save time and achieve success.

SAP Certified - Database Administrator - SAP HANA Sample Questions (Q168-Q173):

NEW QUESTION # 168

CHALLENGE 2 - Replenishment Analytics Monitoring Baseline

Inventory availability analytics took longer during the evening replenishment review. The merchandising operations lead asks for tuning before the next remediation checkpoint, but current monitoring thresholds still reflect earlier regional reporting patterns. What should the database owner do first?

- A. Move the tuning decision to SAP HANA Cloud because the reporting workload may migrate later.
- B. Disable evening monitoring so the next checkpoint focuses only on whether reports complete.
- C. **Validate threshold relevance and capture the current monitoring baseline before approving tuning.**
- D. Apply tuning immediately because replenishment reporting affects store planning decisions.

Answer: C

NEW QUESTION # 169

A regional hospitality group runs SAP HANA for occupancy and revenue analytics. SAP HANA cockpit shows the database as available, but the operations team notices that a performance alert appears only after the reporting peak has already passed. The monitoring history shows that the alert condition existed during the peak window, but the alert evaluation schedule was changed during an administration cleanup. Reports eventually complete, so the support team suggests accepting the current behavior. The constraint is that the administrator must ensure monitoring supports timely operational response, not only after-the-fact review. The next reporting peak must be covered by alert evaluation that reflects the active workload window. Which action best addresses the alert timing issue?

- A. Restart the database before the next peak so alert evaluation begins from a clean runtime state.
- B. Raise the alert threshold so fewer delayed alerts appear in SAP HANA cockpit.
- C. Accept the current monitoring behavior because reports eventually complete after the reporting peak.
- D. Align the alert evaluation schedule with the reporting peak window and validate that alerts trigger during the active workload period.

Answer: D

Explanation:

Feedback:

This corrects the monitoring schedule dependency. Aligning evaluation timing with the reporting peak and validating trigger behavior confirms that workload activity, alert evaluation, notification evidence, and operational response timing are aligned.

NEW QUESTION # 170

A regional chemicals distributor is preparing an SAP HANA installation handover for a newly built on-premises administration environment. The installation process completed, and the database starts successfully. During handover review, the administrator finds that the installation record confirms software setup but does not include evidence that backup scheduling and monitoring checks were enabled for the new system. The infrastructure lead wants to accept the environment because startup was successful. The constraint is that the administrator must confirm the installed system is ready for routine administration before handover. The decision must include post-installation operational controls, not only installation completion. Which action best supports the handover decision?

- A. Defer backup and monitoring setup until business users begin reporting from the new database.
- B. Run a second database startup and use the repeated startup result as evidence that administration controls are ready.
- C. Enable and validate the required backup scheduling and monitoring checks, then accept the installation handover only after those controls are confirmed.
- D. Accept the handover because installation completion and successful startup prove the new SAP HANA system is ready.

Answer: C

Explanation:

Feedback:

This completes the post-installation administration layer before operational acceptance. Validating backup scheduling and monitoring checks confirms that installation, startup, routine administration controls, and handover evidence are aligned.

NEW QUESTION # 171

A regional nonprofit services provider uses SAP HANA for daily service utilization reporting. SAP HANA cockpit shows that a memory-related alert rule is triggered during the early reporting window, but the operations mailbox does not receive the expected notification. The database remains available, and dashboard users do not report failures. During review, the administrator notices that the alert appears in the monitoring view, but the notification assignment used by the operations team was not confirmed after a recent administration cleanup. The constraint is that the administrator must restore reliable alert handling before the next reporting window. The team needs proof that monitoring detection and notification delivery are both working, not only that the alert is visible in cockpit. Which action best addresses the alert handling gap?

- A. Verify the notification assignment for the triggered alert, correct the missing assignment, and validate that a new alert event reaches operations.

- B. Increase the alert threshold so the memory-related event occurs less often during the reporting window.
- C. Restart the database so alert rules and notification assignments are reloaded during the next startup cycle.
- D. Close the alert because SAP HANA cockpit already displays it and the database remains available for reporting users.

Answer: A

Explanation:

Feedback:

This acts at the alert routing layer where detection and notification must be connected. Correcting the assignment and validating delivery confirms that monitoring recognition, notification binding, execution, and operational evidence are aligned.

NEW QUESTION # 172

A retail planning team is preparing to shift one reporting workload from an on-premises SAP HANA database to SAP HANA Cloud, while keeping transactional processing on-premises for the current phase. The technical migration path is considered feasible, but the administration team is concerned that daily operational checks, backup assumptions, and monitoring responsibilities may be split incorrectly across the two environments if the transition is rushed.

Management wants a first step that supports phased modernization without forcing an immediate redesign of the full landscape. The decision must reduce transition risk and preserve clear operational ownership across the mixed environment.

Which approach is best for this phase?

- A. Move the reporting workload now, but continue using the same undifferentiated operational runbook for both environments until stabilization is complete.
- **B. Move the reporting workload in phases and define environment-specific operational checks and responsibilities before productive use in the target landscape.**
- C. Keep all workloads on-premises and focus only on increasing monitoring frequency to reduce modernization risk.
- D. Delay the reporting move until both transactional and reporting workloads can be migrated together in one cutover.

Answer: B

Explanation:

Feedback:

This drill addresses modernization pressure. A phased move is allowed by the mixed deployment model, but the real risk is operational ambiguity between on-premises and cloud responsibilities. The best answer supports incremental modernization while separating environment-specific checks, monitoring, and ownership before productive use. That reduces transition risk without demanding full redesign.

NEW QUESTION # 173

.....

As we know, our products can be recognized as the most helpful and the greatest C_DBADM_2601 study engine across the globe. Even though you are happy to hear this good news, you may think our price is higher than others. We can guarantee that we will keep the most appropriate price because we want to expand our reputation of C_DBADM_2601 Preparation dumps in this line and create a global brand. What's more, we will often offer abundant discounts of C_DBADM_2601 study guide to express our gratitude to our customers.

Certification C_DBADM_2601 Test Answers: https://www.pdf.dumps.com/C_DBADM_2601-valid-exam.html

SAP Test C_DBADM_2601 Registration So we clearly understand our duty to offer help in this area, The software by PDFDumps gives the candidates the results and progress reports to help them monitor their performance for the SAP C_DBADM_2601 exam, PDFDumps Certification C_DBADM_2601 Test Answers offers you the updated exam material resource for your Certification exams, which aims to make you professional on the first attempt, To help you have a thorough understanding of our C_DBADM_2601 training prep, free demos are provided for your reference.

We understand the Agile Manifesto and lean C_DBADM_2601 thinking, and focus on the big ideas—we understand that all practices are just context dependent, Netflow can be used to Online C_DBADM_2601 Training Materials identify and classify Denial of Service (DoS) virus and worm attacks in real time.
