

NCP-MCI-7.5 Valid Test Guide - 100% Pass 2026 First-grade Nutanix NCP-MCI-7.5 New Exam Materials

Remember that this is a crucial part of your career, and you must keep pace with the changing time to achieve something substantial in terms of a certification or a degree. So do avail yourself of this chance to get help from our exceptional Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) dumps to grab the most competitive Nutanix NCP-MCI-7.5 certificate. Exam4Tests has formulated the Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) product in three versions. You will find their specifications below to understand them better.

Because of the different habits and personal devices, requirements for the version of our NCP-MCI-7.5 exam questions vary from person to person. To address this issue, our NCP-MCI-7.5 actual exam offers three different versions for users to choose from. The PC version is the closest to the real test environment, which is an excellent choice for windows - equipped computers. And this version also helps establish the confidence of the candidates when they attend the NCP-MCI-7.5 Exam after practicing.

NCP-MCI-7.5 New Exam Materials, NCP-MCI-7.5 Test Sample Online

If you are going to purchase NCP-MCI-7.5 test materials online, the safety of the website is significant. We provide you with a clean and safe online shopping environment if you buying NCP-MCI-7.5 training materials from us. We have professional technicians to exam the website every day, therefore the safety for the website can be guaranteed. Moreover, NCP-MCI-7.5 Exam Materials are high quality and accuracy, and you can pass the exam just one time. We offer you free update for 356 days for NCP-MCI-7.5 training materials and the update version will be sent to your email automatically.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Sample Questions (Q36-Q41):

NEW QUESTION # 36

An administrator needs an account for automation that can be granted granular permissions and being authenticated without an interactive user password.

Which statement best describes how a Prism Central service account authenticates?

- A. Using the cluster admin password and inherits full admin privileges
- B. Using a CA-signed SSL certificate imported into the Prism Central
- **C. Using a shared secret key managed through IAM and can be assigned RBAC roles**
- D. Using an external KMS key and is limited to encryption operations

Answer: C

Explanation:

Nutanix documentation for service accounts states that authentication is done using a shared secret key generated and managed through IAM. The same service-account framework is designed so the account can perform actions according to assigned privileges rather than inheriting unrestricted administrator rights. In practical terms, that means a service account is meant for automation, API use, and non-interactive authentication, while still being controlled through the RBAC model. That matches D exactly.

The incorrect options reflect common misunderstandings. A service account does not simply log in with the cluster admin password, and it does not automatically inherit full administrator privileges. It is not an external- KMS construct, and certificate-based auth is not how Nutanix documents this service-account mechanism.

The exam clue is the phrase "without an interactive user password" combined with "granular permissions." Nutanix's answer to that requirement is a service account authenticated by an IAM-managed shared secret with assignable permissions. Therefore D is the authentic Nutanix answer.

NEW QUESTION # 37

An administrator has determined that the storage space is low within a Nutanix cluster environment. The container is set to Replication Factor 2. After deleting dozens of inactive VMs earlier today, the administrator notices no space reclamation. What could be the cause of this?

- A. Inactive VMs take up memory only and not storage space.
- B. Medusa only runs once every 24 hours.
- C. Storage can only be reclaimed after restarting CVM services.
- **D. The VMs are still sitting in the recycle bin.**

Answer: D

Explanation:

Here the uploaded answer key says C, but official Nutanix documentation supports D. Nutanix documents that the Recycle Bin retains deleted VMs and volume groups for up to 24 hours by default, and space is not immediately reclaimed while those deleted entities are still being retained. Nutanix also provides a specific workflow to clear space used by the Recycle Bin immediately. That behavior matches the question perfectly:

the VMs were deleted earlier today, yet space has not come back. The most likely reason is that the deleted VMs are still in the recycle bin. (portal.nutanix.com , portal.nutanix.com , portal.nutanix.com) The answer mentioning "Medusa once every 24 hours" is not the correct interpretation for this symptom.

Nutanix's documented retention mechanism is the recycle bin, not a once-daily reclaim cycle as the main reason space stays consumed immediately after deletion. So based on the official docs, D is the authentic answer.

NEW QUESTION # 38

An administrator has been tasked with migrating VMs out of a storage container that isn't using compression and is using a non-standard naming convention. The administrator needs to do other administrative tasks during the vDisk live migration. What administrative tasks can the administrator perform during the vDisk live migration?

- A. Protection domain based replication of the VM
- B. Protection policy based replication of the VM
- C. Update memory and vCPU config of the VM
- **D. Snapshot, clone, backup or resize the VM**

Answer: D

Explanation:

Here the uploaded answer key says C, but current Nutanix documentation says the opposite. Nutanix's Live vDisk Migration Across Storage Containers documentation explicitly states that during an ongoing vDisk migration you cannot perform operations such as clone the VM, resize the VM, or take a snapshot. Nutanix also states, under DR considerations, that you should remove the VM from the protection domain or protection policy, migrate the vDisks, and then add the VM back afterward. That means the actions listed in option C are specifically blocked during vDisk live migration. (Nutanix Portal) Because all four answer choices are problematic against the current documentation, this is one of the questions I would flag as flawed in the source bank. The most accurate real-world Nutanix answer is: you should not perform snapshot, clone, resize, or DR policy/protection-domain operations during the migration.

So although the uploaded key marks C, the official docs indicate that C is not actually allowed. For your final study document, this question should ideally be corrected or rewritten because the documented AHV behavior does not cleanly support any listed option as a valid "can perform during migration" task. (Nutanix Portal)

NEW QUESTION # 39

An administrator needs to give a user group access to resources from multiple clusters. Which action must be performed in Prism Central?

- A. Enable Micro Services Platform
- **B. Configure Nutanix Projects**
- C. Enable Advanced Network Controller
- D. Configure Availability Zone

Answer: B

Explanation:

Nutanix documentation explains that Projects in Prism Central provide logical groupings of infrastructure resources and user access, and that you can add users and user groups to a project while also allowing clusters and subnets in that project. That is exactly the mechanism used when a user group needs controlled access to resources drawn from multiple clusters. The project becomes the governance boundary that ties users, roles, and infrastructure scope together. Therefore A. Configure Nutanix Projects is the correct answer. (Nutanix Portal) The other choices are unrelated to access scoping across clusters. Advanced Network Controller deals with networking services and policy capabilities, not user resource assignment. Micro Services Platform is not the RBAC/governance feature for multi-cluster access. Availability Zone is relevant for placement and DR topologies, not for delegating cluster resources to user groups. Nutanix's governance guidance is clear that Projects are the construct used to organize infrastructure resources and assign them to users or groups with the proper RBAC controls. So for a user group that needs access to resources from multiple clusters, the authentic Prism Central action is A. (Nutanix Portal)

NEW QUESTION # 40

A database server has a corrupt database after a VM was restored from a recovery point. The database VM is part of the VIP_VMS category that is protected by a Protection Policy with asynchronous schedule.

After checking the state of NGT tools, an administrator is investigating the Protection Policy looking for the root cause of the database corruption.

What is the most probably cause?

- A. The VM should have been added to the Applications category.
- B. Roll-up schedule is used in Protection Policy instead of Linear.
- **C. Take App-Consistent Recovery Point option is not selected.**
- D. Set RPO is too high for protecting database VMs.

Answer: C

Explanation:

For database workloads, Nutanix documentation distinguishes between crash-consistent and application- consistent recovery points. If the Take App-Consistent Recovery Points option is not selected, the recovery point may capture storage in a crash-consistent state only. For transactional databases, that can lead to corruption, incomplete writes, or recovery issues after restore. Nutanix specifically documents that selecting the app-consistent option creates application-consistent recovery points; if you do not select it, the recovery points are crash-consistent. That makes D the most likely root cause. (portal.nutanix.com , portal.nutanix.com) The mention that NGT was checked is important because NGT participation is commonly part of quiesced and app-consistent protection workflows. A high RPO can increase data loss, but it does not by itself explain logical corruption inside the restored database. Category choice and roll-up schedule are also not the primary issue. Nutanix best practice for databases is to ensure application-consistent protection is enabled wherever supported. Therefore D is the correct answer.

NEW QUESTION # 41

.....

Our Exam4Tests website has a long history of providing NCP-MCI-7.5 test training materials. With many years'hard work, our passing rate of Exam4Tests's NCP-MCI-7.5 exam has achieved 100%. In order to make sure that the accuracy of NCP-MCI-7.5 test of Exam4Tests, our NCP-MCI-7.5 test training materials are continuing update. If you purchase our NCP-MCI-7.5 exam dumps, we will offer one year-free update service.

NCP-MCI-7.5 New Exam Materials: <https://www.exam4tests.com/NCP-MCI-7.5-valid-braindumps.html>

This example adds the new user Don to the 'pubs' database, NCP-MCI-7.5 Valid Test Guide mapped back to the login ID of Don in the 'syslogins' table in the 'master' database, At first, you may know little about the NCP-MCI-7.5 certification, then, you can visit the official website for some detail information or you can inquiry our customer service through online chat or email.

In order to success, don't miss Exam4Tests, You need to prepare to NCP-MCI-7.5 braindump actual test and read the NCP-MCI-7.5 test study materials, you may think it boring, and what's more, you have no time and energy to prepare the NCP-MCI-7.5 test exam.

If you already have a job and you are searching for the NCP-MCI-7.5 best way to improve your current Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 test situation, then you should consider the NCP-MCI exam dumps.
