Topic	Details
Topic 1	<ul style="list-style-type: none">• Architect with Data Governance Services: This section evaluates skills of a Data Governance Specialist, covering the architecture of knowledge catalogs to enable data discovery and management. Data Privacy architectures ensure compliance with regulatory requirements around data protection. Knowledge Accelerators involve designing solutions that speed up data governance processes through predefined policies and templates.
Topic 2	<ul style="list-style-type: none">• Security Requirements: This domain targets a Security Architect and focuses on planning security for a Cloud Pak for Data deployment. It includes managing certificates that secure communications, identity management systems, and access and authorization controls to enforce secure and compliant user and service interactions. The auditing features and their integration with enterprise audit systems are crucial to ensure traceability and accountability. Asset interchange security involves safeguarding data movement between services.
Topic 3	<ul style="list-style-type: none">• Architect with AI Series: This section measures the skills of an AI Solution Architect and includes designing architectures for solutions involving various IBM Watson AI services. Architecting with Watson Assistant involves creating conversational AI interfaces. Watson Discovery solutions focus on building cognitive search and content analytics applications. Watson Pipelines solutions involve orchestrating data science workflows. Watson OpenScale architectures enable AI model monitoring and governance. Architecting with Match 360 supports personalized engagement by integrating multi-channel customer insights.

IBM Cloud Pak for Data v4.7 Architect Sample Questions (Q177-Q182):

NEW QUESTION # 177

How does watsonx.data provide data sharing between Db2 Warehouse, Netezza, and any other data management solution?

- A. Secure File Transfer Protocol (SFTP)
- B. JSON file format
- C. watsonx.data proprietary fast loader
- **D. Iceberg tables**

Answer: D

Explanation:

watsonx.data uses Apache Iceberg tables as the open table format for data sharing across platforms like Db2 Warehouse, Netezza, and other compatible data management solutions. Iceberg provides a transactional and schema-evolution-friendly table layer, allowing multiple engines to read and write data concurrently. This approach avoids proprietary loaders or simple file transfers and ensures efficient interoperability between different systems.

NEW QUESTION # 178

What outcomes can be achieved from Match 360?

- A. Connect disparate data sources to provide a virtual view of your data.
- **B. Produces statistics and graphs to let users analyze and explore master data.**
- C. Uses a dialog format to talk with your data to get insights.
- D. Produces a AI based dashboard to let users analyze business data.

Answer: B

Explanation:

Match 360 is IBM's master data management (MDM) service integrated into Cloud Pak for Data. It produces master data views along with statistics, graphs, and insights that allow users to explore, analyze, and understand their master data entities (e.g., customers, products). While it does integrate data from disparate sources, its focus is on consolidating and providing master data analysis rather than virtual views (B) or conversational analytics (A).

NEW QUESTION # 179

What must be created to enable the Cloud Pak for Data platform to use a company's custom CA certificate to validate certificates from internal servers?

- A. A secret containing a wildcard certificate for all internal servers.
- **B. A configmap that contains the company's CA certificate.**
- C. A secret that contains the company's CA certificate.
- D. A configmap that contains all internal server certificate chains.

Answer: B

Explanation:

To enable IBM Cloud Pak for Data to trust certificates from internal servers using a custom Certificate Authority (CA), the correct method is to create a Kubernetes ConfigMap that contains the CA certificate. This ConfigMap is referenced by the platform's foundational services to include the CA in the trusted root store.

Secrets are typically used for storing sensitive data like private keys and TLS certificates but are not used for adding trusted root CAs at the platform level. A ConfigMap is explicitly required by the platform to inject the CA trust into the certificate validation chain.

NEW QUESTION # 180

Which Db2 Big SQL component uses system resources efficiently to maximize throughput and minimize response time?

- A. Analyzer
- B. Hive
- C. Scheduler
- **D. StreamThrough**

Answer: D

Explanation:

StreamThrough is a high-performance component used in Db2 Big SQL within IBM Cloud Pak for Data that is optimized to manage data streams and queries efficiently. It is designed to maximize throughput and minimize query response times by optimizing memory usage, resource allocation, and processing logic.

Unlike Hive or Analyzer, which are used for query execution and analysis, StreamThrough enables efficient pipeline execution by streamlining data handling. Scheduler is used for job timing but does not influence runtime efficiency directly. StreamThrough is purpose-built to enhance performance through optimal resource usage.

NEW QUESTION # 181

What role does storage management play in optimizing watsonx.data performance?

- A. Ignoring data security protocols
- B. Ensuring data is stored redundantly
- C. Minimizing data accessibility
- **D. Facilitating efficient data retrieval and processing**

Answer: D
