Latest F3 Dumps, F3 New Dumps Ppt

We have prepared our CIMA F3 Training Materials for you. They are professional practice material under warranty. Accompanied with acceptable prices for your reference, all our materials with three versions are compiled by professional experts in this area more than ten years long.

The CIMA F3 Exam consists of three main areas of study: financial analysis, financial management, and financial risk management. The financial analysis section focuses on the interpretation of financial statements, ratios, and performance measures. The financial management section covers topics such as capital budgeting, financing, and working capital management. The financial risk management section covers risk identification, assessment, and response.

CIMA F3 Financial Strategy Sample Questions (Q85-Q90):

NEW QUESTION # 85
A listed company follows a policy of paying a constant dividend. The following information is available:
* Issued share capital (nominal value $0.50) $60 million
* Current market capitalisation $480 million
The shareholders are requesting an increased dividend this year as earnings have been growing. However, the directors wish to retain as much cash as possible to fund new investments. They therefore plan to announce a
1-for-10 scrip dividend to replace the usual cash dividend.
Assuming no other influence on share price, what is the expected share price following the scrip dividend?
Give your answer to 2 decimal places.

Answer:

Explanation:

$?
3.64, 3.63, 3.65Find number of existing sharesIssued share capital = $60m, nominal $0.50Shares in issue=600.
5=120 million shares\text{Shares in issue} = \frac{60}{0.5} = 120\ \text{million shares}Shares in issue=0.
560=120 million shares Current share priceMarket capitalisation = $480mP0=480120=$4.00P_0 = \frac{480}
{120} = \$4.00P0=120480=$4.00 Effect of 1-for-10 scrip dividendNew shares issued = 120m × 1/10 =
12mTotal shares after scrip = 120m + 12m = 132mNo cash leaves the company, so total value stays at $480m.
New theoretical share pricePex-scrip=480132=3.6363...#$3.64P_{\text{ex-scrip}} = \frac{480}{132} =
3.6363\ldots \approx \boxed{\$3.64}Pex-scrip=132480=3.6363...#$3.64 Answer (to 2 d.p.):$3.64\boxed
{\$3.64}$3.64

NEW QUESTION # 86
A venture capitalist invests in a company by means of buying
* 6 million shares for $3 a share and
* 7% bonds with a nominal value of $2 million, repayable at par in 3 years' time The venture capitalist expects a return on the equity portion of the investment of at least 20% a year on a compound basis over the first 3 years of the investment The company has 8 million shares in issue What is the minimum total equity value for the company in 3 years' time required to satisfy the venture capitalist's expected return?
Give your answer to the nearest $ million

Answer:

Explanation:
41
Workings Equity investment by the venture capitalist6 million shares at $3 eachEquity invested = 6m × $3
= $18 millionRequired return on equityTarget return = 20% per year, compound, for 3 yearsFuture value of equity stake in 3 years:18×(1.2)3=18×1.728=31.104 million18 \times (1.2)
