

Get Better Grades in Exam by using Microsoft DP-300 Questions

P.S. Free & New DP-300 dumps are available on Google Drive shared by Lead2PassExam: <https://drive.google.com/open?id=17B6dfKSgtHiVesovmPgZAYrvcS54OEMV>

There are many other advantages. To gain a full understanding of our product please firstly look at the introduction of the features and the functions of our DP-300 exam torrent. The page of our product provide the demo and the aim to provide the demo is to let the you understand part of our titles before their purchase and see what form the software is after the you open it. The client can visit the page of our product on the website. So the client can understand our DP-300 Quiz torrent well and decide whether to buy our product or not at their wishes. The client can see the forms of the answers and the titles.

The DP-300 certification exam is designed to validate an individual's expertise in administering relational databases on Microsoft Azure. By earning this certification, individuals can demonstrate their proficiency in designing, implementing, and maintaining Azure SQL databases, which is a critical skill for data professionals in today's business world. With the growing demand for cloud-based solutions, the DP-300 Certification is an excellent way to leverage one's skills and enhance career growth in the IT industry.

DP-300 latest study torrent & DP-300 practice download pdf

No matter on any condition, our company will not use your information to make profits. As already mentioned above, our DP-300 learning materials attach great importance to the interests of customers. A product can develop for so many years, and ultimately the customer's trust and support. Many of the users of DP-300 training prep were introduced by our previous customers. They truly trust our DP-300 exam questions. And as long as you buy our DP-300 practice guide, we believe you will trust them as well.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q92-Q97):

NEW QUESTION # 92

SIMULATION

You need to configure a disaster recovery solution for db1. When a failover occurs, the connection strings to the database must remain the same. The secondary server must be in the West US 3 Azure region.

To complete this task, sign in to the virtual machine. You may need to use SQL Server Management Studio and the Azure portal.

Answer:

Explanation:

□

NEW QUESTION # 93

HOTSPOT

You have an Azure SQL database named DB1. The automatic tuning options for DB1 are configured as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer:

Explanation:

Section: [none]

Explanation:

Box 1: Yes

We see: Tuning option: Create index ON

CREATE INDEX - Identifies indexes that may improve performance of your workload, creates indexes, and automatically verifies that performance of queries has improved.

Box 2: No

Box 3: Yes

FORCE LAST GOOD PLAN (automatic plan correction) - Identifies Azure SQL queries using an execution plan that is slower than the previous good plan, and queries using the last known good plan instead of the regressed plan.

NEW QUESTION # 94

You have an Azure SQL database that contains a table named factSales. FactSales contains the columns shown in the following table.

FactSales has 6 billion rows and is loaded nightly by using a batch process.

Which type of compression provides the greatest space reduction for the database?

- A. columnstore compression
- B. page compression
- C. row compression
- D. columnstore archival compression

Answer: D

Explanation:

Columnstore tables and indexes are always stored with columnstore compression. You can further reduce the size of columnstore data by configuring an additional compression called archival compression.

Note: Columnstore - The columnstore index is also logically organized as a table with rows and columns, but the data is physically stored in a column-wise data format.

NEW QUESTION # 96

You have a resource group named App1Dev that contains an Azure SQL Database server named DevServer1. DevServer1 contains an Azure SQL database named DB1. The schema and permissions for DB1 are saved in a Microsoft SQL Server Data Tools (SSDT) database project.

You need to populate a new resource group named App1Test with the DB1 database and an Azure SQL Server named TestServer1. The resources in App1Test must have the same configurations as the resources in App1Dev.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

NEW QUESTION # 97
