At the same time, the content of the B2C-Commerce-Architect practice engine is compiled to be easily understood by all our customers.

Salesforce B2C-Commerce-Architect Exam is a comprehensive test that covers a wide range of topics related to B2C commerce architecture on the Salesforce platform. This includes topics such as designing and implementing complex B2C commerce solutions, integrating with external systems, creating scalable and fault-tolerant architectures, and ensuring compliance with industry standards and regulations.

Salesforce Certified B2C Commerce Architect Sample Questions (Q22-Q27):

NEW QUESTION # 22

A company manages its regional operations as separate businesses. The regional sites (Site A and Site B) operate with:

- * Separate realms
- * Different code bases
- * Different category navigation menus

* Frequent updates on category structure

The requirement from the business is to provide hreflang link tags on category pages pointing to the same category on the other regional site. Example MTML for one of these links as displayed on Site A is:

```
<link rel="alternate" href="https://www.example.com/en_US/womens-new-arrivals" hreflang="en_US" />
```

Which solution should the Architect choose while keeping performance in mind?

- A. Create a new custom object type. Populate the hreflang mapping for each category and locale in this custom object. Use the custom object to display the hreflang link tag.
- **B. Create a new custom attribute on the Category. Populate the attribute with the other entire site URLs corresponding to locales in JSON format. Use the attribute to display the hreflang link tag.**
- C. Create a custom Business Manager module. Ask the business to maintain the hreflang link tags for each regional site in this Business Manager module.
- D. Create additional locales in all realms. Create a new custom attribute on the category that is localized. Populate the attribute with the other site URLs and use it to display the hreflang tag.

Answer: B

NEW QUESTION # 23

During the testing of the login form, QA finds out that the first time the user can log in, but every other login attempt from another computer leads to the homepage and the basket being emptied. Developers tried to debug the issue, but when they add a breakpoint to the login action, it is not hit by the debugger.

What should the Architect recommend developers to check?

- A. Add remote include for the login page
- B. Remove CSRF protection from Login Form Action.
- C. Add disable cache page in the template ISML - `<is:cache status="off"/>`.
- **D. Check Login Form and any included templates for includes that enable page caching.**

Answer: D

Explanation:

When QA encounters issues with login persistence across multiple computers, where subsequent logins lead to a redirection and an emptied basket, the likely culprit could be unintended caching of login-related pages or processes. In Salesforce B2C Commerce, certain cache settings might inadvertently cause user sessions to be shared or not properly invalidated. The recommendation D, to check the login form and related templates for caching directives that might be erroneously caching login actions or user-specific data, addresses this potential issue. Developers should ensure that pages handling user sessions and authentication are configured to disable caching, thus preventing session data from being mistakenly retained or shared across different users.

NEW QUESTION # 24

A B2C Commerce developer has recently completed a tax service link cartridge integration into a new SHU site. During review, the Architect notices the basket calculation hook is being run multiple times during a single tax call.

What is the reason for the duplicate calculations being run?

- A. The LINK cartridge is included multiple times in the cartridge path.
- **B. The tax call is being called multiple times.**
- C. There are multiple hook.js files referring to the same hook.
- D. The checkout is designed to recursively refer to the same hook.

Answer: B

NEW QUESTION # 25

The Client is Crowing and decided to migrate its e-commerce website to B2C Commerce. The Client provided the Architect with the metrics for its existing website over the past 12 months and forecasted into the next year:

Average visits per hour	500
Peak visits per hour	1000
Average page views per hour	10000
Peak page views per hour	20000
Average orders per hour	100
Peak orders per hour	250
Average items per order	2.1
Average order value	300 USD
Expected growth percentage	300

Noting these historical metrics and the forecasted growth of 300%, which load test targets meet best practices for testing the new B2C Commerce site?

- A. 3000 visits per hour, 60000 page views per hour, and 750 orders per hour
- B. 15000 visits per hour, 300000 page views per hour, and 3750 orders per hour
- C. 1500 visits per hour, 30000 page views per hour, and 375 orders per hour
- D. 150000 visits per hour, 3000000 page views per hour, and 37500 orders per hour

Answer: A

NEW QUESTION # 26

An Order Management System (OMS) handles orders from multiple brandspecific sites, as part of the processing, the OMS sends the processing detail to be added at notes to the orders in B2C Commerce. These processing details are captured temporarily in custom objects, and are later processed by a batch Job that:

- * Processes the custom object to extract theorderid and note data.
- * Tries to load the order.
- * If the order is not found, it deletes the custom object and moves on.
- * If the order is found, it updates notes In the Order, upon successful update of this order, it deletes the custom object.

There is an Issue reported that the job is constantly failing and custom objects are growing in number. On investigating the production look the message below is being logged on each failure:

```
Processing of custom object 1xoskncjdw687769 failed for replacement order 1000000001. Exception details:
com.demandware.core.quota.QuotaLimitExceededException: Limit for quota 'object.OrderPO.relation.notes'
exceeded. Limit is 1000, actual is 1001. at
com.demandware.core.quota.QuotaExceededException.throwLimitExceed(QuotaExceededException.java:21) at
com.demandware.core.quota.QuotaImpl.handleHardLimitViolation(QuotaImpl.java:333) at
```

What are three solution The Architect can take to fix this issue without losing meaningful data?

Choose 3 answers

- A. Using BM site import/export, softenthe<quota id="object.orderPo.relation.notes"> <custom- action>warn<custom- action> </quot>to make sure that neither order notes are lost and custom object is processed.
- B. Take the backup of the Order as XML and delete the notes from Order to ensure on the next jobrun the custom objects are getting processed.
- C. Engage B2C Commerce Support Team to soften the quota limit for "object.OrderPO.relation.notes"
- D. Take the backup of the custom object and delete the custom object to ensure on the next job run the custom objects are getting processed.
- E. Take the backup of the Order as XML and delete the Order to ensure on the next job run, the custom objects are getting processed.

Answer: B,C,D

Explanation:

When facing an issue with a growing number of custom objects due to the exceeded quota limit for order notes, effective solutions include:

* Option C (Take the backup of the custom object and delete the custom object): This ensures that the data is preserved while freeing up space for new processes and reducing the load, allowing the job to continue running without the impediment of quota limits.

* Option D (Engage B2C Commerce Support Team to soften the quota limit for 'object.OrderPO.relation.notes'): Increasing the quota limit can resolve the root cause of the issue by accommodating the actual business needs without compromising the integrity of order processing and note addition.

* Option E (Take the backup of the Order as XML and delete the notes from Order): This allows the job to process the custom

objects as intended in subsequent runs by clearing out space while ensuring the order data remains intact for business needs. These steps address the quota limit issue effectively without losing valuable order or note data, ensuring continuity and integrity of business operations.
