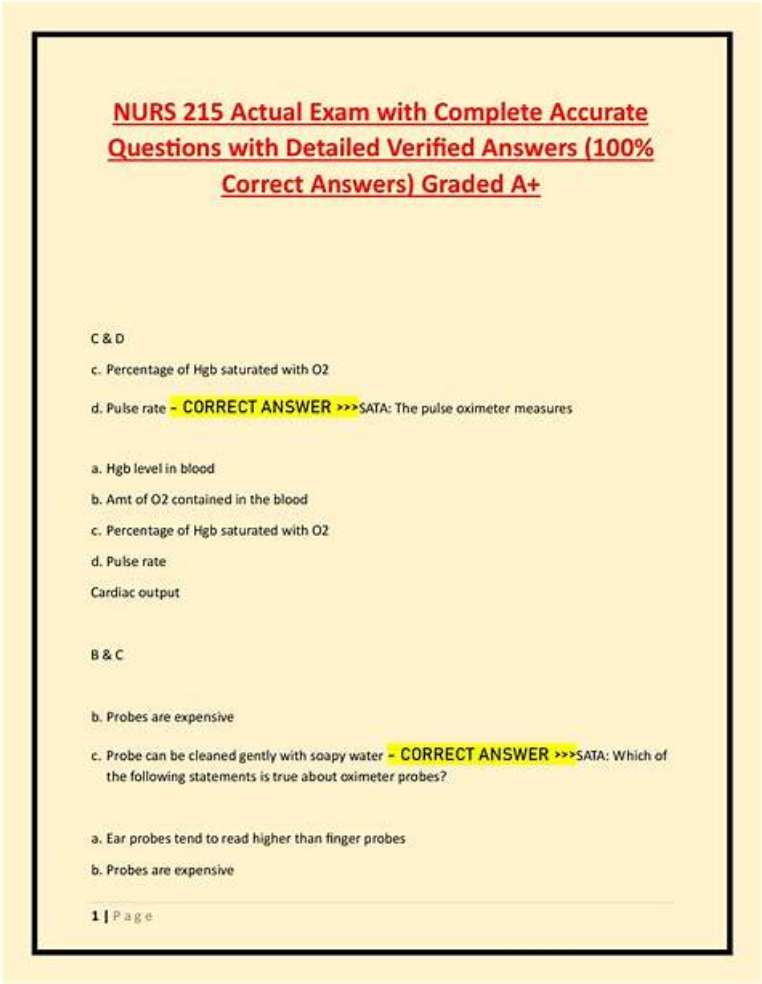
Test 300-215 Sample Questions - 300-215 Actual Exams



NURS 215 Actual Exam with Complete Accurate Questions with Detailed Verified Answers (100% Correct Answers) Graded A+

C & D

c. Percentage of Hgb saturated with O2

d. Pulse rate - CORRECT ANSWER >>>SATA: The pulse oximeter measures

a. Hgb level in blood

b. Amt of O2 contained in the blood

c. Percentage of Hgb saturated with O2

d. Pulse rate

Cardiac output

B & C

b. Probes are expensive

c. Probe can be cleaned gently with soapy water - CORRECT ANSWER >>>SATA: Which of the following statements is true about oximeter probes?

a. Ear probes tend to read higher than finger probes

b. Probes are expensive

P.S. Free & New 300-215 dumps are available on Google Drive shared by PrepPDF: https://drive.google.com/open?id=1udbZ8WhEZgjQhbxnhsDwAYkfG1-TXsg6

With the pass rate reaching 98.65%, our 300-215 training materials have gained popularity in the international market. If you choose us, we can ensure that you can pass the exam in your first attempt. We are pass guarantee and money back guarantee for 300-215 exam dumps. If you fail to pass the exam, we will give you refund. You can try free demo before buying 300-215 Exam Materials, so that you can have deeper understanding of what you are going to buy. Free update for one year is available, the update version for 300-215 exam braindumps will be sent to your email automatically.

Forensics Processes: This subject area checks the skills of the specialists in the following tasks:

- Recommending next step(s) in the process of evaluating files based on distinguished characteristics of files within a given scenario
- Analyzing network traffic affiliated with malicious activities utilizing network monitoring tools (for example, NetFlow and display filtering in Wireshark)
- Describing antiforensic techniques (for instance, obfuscation, Geo location, and debugging)
- Interpreting binaries utilizing objdump as well as other CLI tools
- Analyzing logs from modern servers and applications (for instance, NGINX and Apache)

To prepare for the Cisco 300-215 Exam, candidates can enroll in Cisco's official training courses or use self-study materials. The official training courses cover all the topics and skills required to pass the exam and provide hands-on experience with Cisco technologies used in cyber forensics and incident response. Self-study materials include books, practice exams, and online resources that provide a comprehensive overview of the exam topics and help candidates practice their skills.

Cisco 300-215 Actual Exams, Certification 300-215 Training

The Cisco 300-215 practice exam software will provide you with feedback on your performance. The Cisco 300-215 practice test software also includes a built-in timer and score tracker so students can monitor their progress. 300-215 Practice Exam enables applicants to practice time management, answer strategies, and all other elements of the final Cisco 300-215 certification exam and can check their scores.

Cisco Conducting Forensic Analysis & Incident Response Using Cisco Technologies for CyberOps Sample Questions (Q39-Q44):

NEW QUESTION # 39
A security team receives reports of multiple files causing suspicious activity on users' workstations. The file attempted to access highly confidential information in a centralized file server. Which two actions should be taken by a security analyst to evaluate the file in a sandbox? (Choose two.)

- A. Inspect processes.
- B. Inspect PE header.
- C. Inspect file type.
- D. Inspect file hash.
- E. Inspect registry entries

Answer: A,B

Explanation:
When analyzing suspicious files in a sandbox environment, a security analyst focuses on identifying and evaluating their behavior in a controlled setting to confirm potential malicious activity:
* Inspect processes (B): Observing the processes that the file spawns or injects into during execution helps identify malicious actions or privilege escalation. This is a crucial part of dynamic analysis in the sandbox environment.
* Inspect PE header (E): The PE (Portable Executable) header contains metadata about how the file will execute on Windows systems. It reveals details such as the entry point, libraries used, and whether the file is suspiciously crafted or packed, which can be strong indicators of malicious behavior.
The other options (A, C, D) are important in the broader forensic analysis, but within thesandbox dynamic analysis, focusing on process behavior and file execution headers is critical for determining how the file interacts with the system and whether it is indeed malicious.
Reference:CyberOps Technologies (CBRFIR) 300-215 study guide, Chapter: Understanding Malware Analysis, Dynamic Analysis of Malware, page 389-392.

NEW QUESTION # 40

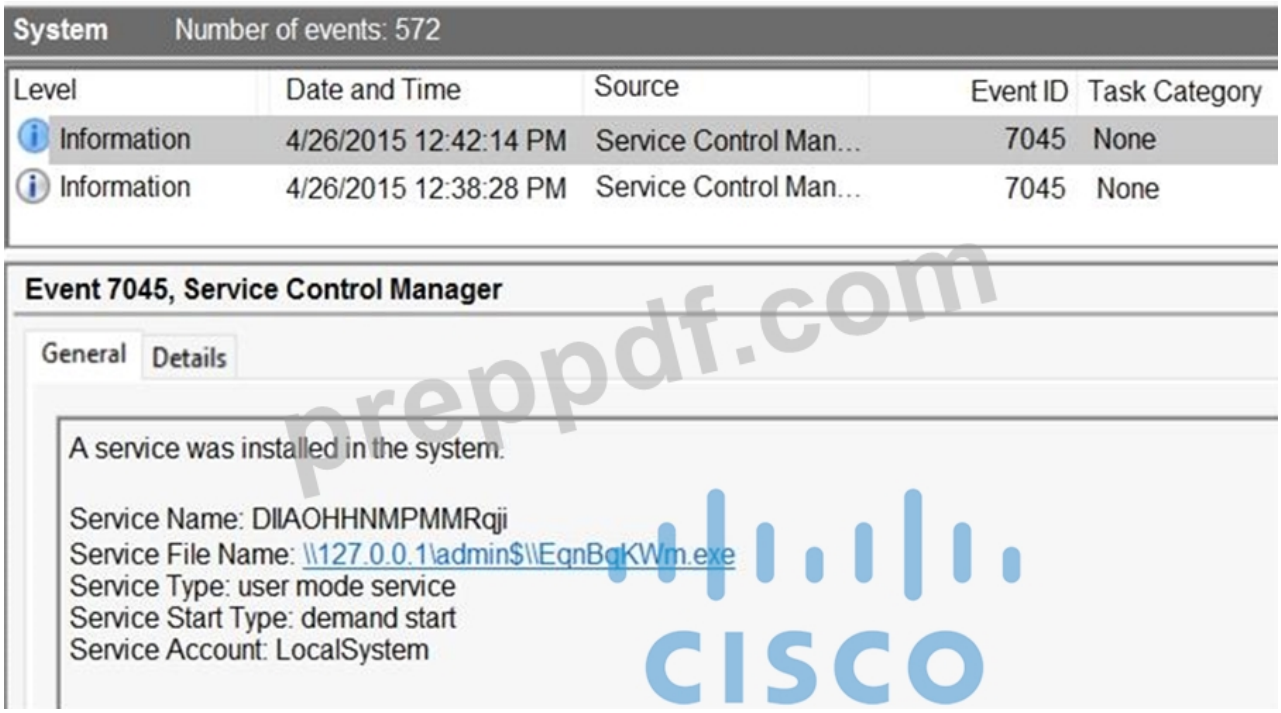
multiple machines behave abnormally. A sandbox analysis reveals malware. What must the administrator determine next?

- A. if Patient 0 tried to connect to another workstation
- B. source code of the malicious attachment
- C. if the file in Patient 0 is encrypted
- D. if Patient 0 still demonstrates suspicious behavior

Answer: A

Explanation:
The key goal during lateral movement analysis is to determine whether the malware spread or attempted to spread beyond the initially compromised system. This is crucial for containment and scoping of the incident.
Logs, sandbox behavior, or network activity may show if Patient 0 initiated outbound connections to other systems, potentially propagating malware across the environment.
Correct answer: D. if Patient 0 tried to connect to another workstation.

NEW QUESTION # 41
Refer to the exhibit.



An HR department submitted a ticket to the IT helpdesk indicating slow performance on an internal share server. The helpdesk engineer checked the server with a real-time monitoring tool and did not notice anything suspicious. After checking the event logs, the engineer noticed an event that occurred 48 hour prior. Which two indicators of compromise should be determined from this information? (Choose two.)

- A. denial of service attack
- B. privilege escalation
- C. malware outbreak
- D. compromised root access
- E. unauthorized system modification

Answer: D,E

NEW QUESTION # 42
An organization recovered from a recent ransomware outbreak that resulted in significant business damage. Leadership requested a report that identifies the problems that triggered the incident and the security team's approach to address these problems to prevent a reoccurrence. Which components of the incident should an engineer analyze first for this report?

- A. risk and RPN
- B. cause and effect
- C. impact and flow
- D. motive and factors

Answer: D

Explanation:
Explanation/Reference:

NEW QUESTION # 43
What is an antiforensic technique to cover a digital footprint?

- A. authentication
- B. privilege escalation
- C. authorization
- D. obfuscation

Answer: D

Explanation:
Antiforensic techniques are methods attackers use to cover their tracks. According to the Cisco CyberOps curriculum, "obfuscation" refers to techniques such as encoding, encrypting, or otherwise disguising commands, payloads, or scripts to avoid detection and analysis. This is a standard antiforensic tactic used to prevent attribution and hinder forensic investigation.
Options like privilege escalation and authentication are part of attack vectors or access control and not antiforensic methods.

NEW QUESTION # 44
.....

It is widely accepted that where there is a will, there is a way; so to speak, a man who has a settled purpose will surely succeed. To obtain the 300-215 certificate is a wonderful and rapid way to advance your position in your career. In order to reach this goal of passing the 300-215 exam, you need more external assistance to help yourself. We have engaged in this career for more than ten years and with our 300-215 Exam Questions, you will not only get aid to gain your dreaming 300-215 certification, but also you can enjoy the first-class service online.
