Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q117-Q122):

NEW QUESTION # 117
What is an Advanced Persistent Threat (APT)?

- A. A sophisticated and targeted attack that aims to gain unauthorized access and maintain persistence over a long period.
- B. A vulnerability in network communication protocols.
- C. A cyberattack that compromises multiple devices simultaneously.
- D. A type of malware that spreads rapidly through a network.

Answer: A

Explanation:
Advanced Persistent Threats (APTs) are stealthy and prolonged attacks targeted at specific organizations or entities. APTs typically employ sophisticated techniques, including social engineering and zero-day exploits. The primary objectives of APTs are to gain unauthorized access, maintain persistence within the target network or system, and conduct reconnaissance or exfiltrate sensitive data without being detected for an extended period of time.

NEW QUESTION # 118
What is the primary function of a server in a network infrastructure?

- A. Monitor network traffic
- B. Detect and prevent intrusions
- C. Store and manage files
- D. Filter incoming and outgoing traffic

Answer: C

Explanation:
A server is a computer or system that is dedicated to serving the needs of other computers (clients) on a network. A primary function of a server is to store and manage files, applications, and other resources that can be accessed by clients over the network.

NEW QUESTION # 119
Which of the following is a key advantage of multifactor authentication?

- A. It eliminates the need for strong passwords.
- B. It provides enhanced security by requiring multiple proofs of identity.
- C. It allows for anonymous access to systems and resources.
- D. It simplifies the authentication process.

Answer: B

Explanation:
Multifactor authentication enhances security by requiring users to present multiple proofs of identity. By combining different factors, such as something you know, something you have, or something you are, it becomes more difficult for unauthorized individuals to gain access. This approach adds an extra layer of protection compared to relying solely on a username and password combination.

NEW QUESTION # 120
Why is it important to stay current with automated threat intelligence technologies?

- A. To adapt to evolving cybersecurity threats

- B. To leverage the latest advancements in machine learning and AI
- C. All of the above
- D. To enhance the effectiveness of security measures

Answer: C

Explanation:
Staying current with automated threat intelligence technologies is vital in the field of cybersecurity. Firstly, as cyber threats continuously evolve, staying up to date allows organizations to adapt their defenses and countermeasures accordingly. Secondly, leveraging the latest advancements in machine learning and artificial intelligence helps improve the accuracy and efficiency of threat detection and response. Lastly, by staying current, organizations can enhance the overall effectiveness of their security measures and stay ahead of potential threats.

NEW QUESTION # 121
What is the primary goal of vulnerability management?

- A. Eliminating all vulnerabilities in a system
- B. Minimizing the impact of potential vulnerabilities
- C. Preventing all cyber attacks
- D. Increasing network throughput

Answer: B

Explanation:
The primary goal of vulnerability management is to identify and prioritize vulnerabilities in a system or network and take appropriate measures to minimize their impact. It involves implementing patch management, deploying security controls, and establishing incident response procedures.
