## Three Easy-to-Use BraindumpsVCE Juniper JN0-105 Exam Practice Questions Formats

Our JN0-105 study materials boost the function to stimulate the real exam. The clients can use our software to stimulate the real exam to be familiar with the speed, environment and pressure of the real JN0-105 exam and get a well preparation for the real

exam. Under the virtual exam environment the clients can adjust their speeds to answer the JN0-105 Questions, train their actual combat abilities and be adjusted to the pressure of the real test. They can also have an understanding of their mastery degree of our JN0-105 study materials. The clients can use our software to stimulate the real exam at any time and there are no limits for the times of stimulation.

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q15-Q20):

### NEW QUESTION # 15

What is the protocol data unit (PDU) of the Data Link Layer?

- A. byte
- B. bit
- C. segment
- D. frame

**Answer: D**

Explanation:

In the OSI model, the Data Link Layer is responsible for node-to-node delivery of data. It frames the packets received from the Network Layer and prepares them for physical transmission. The Protocol Data Unit (PDU) for the Data Link Layer is called a "frame." Frames encapsulate the network layer packets, adding a header and a trailer that include the hardware addresses of the source and destination, among other things, facilitating the data link layer services like frame synchronization, flow control, and error checking.

### NEW QUESTION # 16

What are two physical interface properties? (Choose two.)

- A. MTU
- B. MAC address
- C. IP address
- D. routing protocols

**Answer: A,B**

Explanation:

Two physical interface properties in Junos OS include the MAC address (A) and the Maximum Transmission Unit (MTU) size (D). The MAC address is a hardware identifier for the network interface, while the MTU size determines the largest packet size that the interface can transmit without needing to fragment the packet.

### NEW QUESTION # 17

Exhibit

```
[edit system archival] user@router# show configuration {
transfer-on-commit; archive-sites {
"scp://user@172.15.100.2 :/archive" password## SECRET-DATA
"ftp://user@10.210.9.178:/archive" password "$9..."; ## SECRET-DATA
.
}
```

Referring to the exhibit, where are the configuration backup files stored?

- A. Files are stored to the SCP site and the FTP site in a round-robin manner.
- B. Files are stored to any site as selected by Junos internally.
- C. Files are stored to the SCP site and the FTP site simultaneously.
- D. Files are stored to the SCP site but if the transfer fails, then to the FTP site.

**Answer: C**

Explanation:

In Junos OS, the `archive-sites` configuration under `[edit system archival]` allows for the automatic backup of configuration files to designated locations upon commit. When multiple `archive-sites` are specified, as shown in the exhibit with both SCP and FTP sites listed, the device does not choose between them or use them in a round-robin manner. Instead, it attempts to transfer the configuration backup

files to all specified sites simultaneously upon each commit. This ensures redundancy and increases the likelihood that a backup will be successfully stored even if one of the transfer methods or destinations fails.

### NEW QUESTION # 18

Which two statements are correct about Junos traceoptions? (Choose two.)

- A. Traceoption output, by default, is stored in /var/log/<file-name>.
- B. Traceoptions are enabled through configuration.
- C. Traceoptions cannot be enabled in a production environment.
- D. Traceoptions are enabled by default.

**Answer: A,B**

### NEW QUESTION # 19

What will the request system configuration rescue save command do?

- A. It saves the candidate configuration as the rescue configuration.
- B. It activates the rescue configuration.
- C. It saves the most recently committed configuration as the rescue configuration.
- D. It saves a configuration version prior to the configuration most recently committed as the rescue configuration.

**Answer: C**

Explanation:

The request system configuration rescue save command in Junos OS saves the most recently committed configuration as the rescue configuration. This rescue configuration can be used to recover the device if future configurations cause issues. It ensures there is a stable, known-good configuration to fall back on, which is crucial in network management and troubleshooting.
