The industry experts hired by AWS-Solutions-Architect-Associate study materials explain all the difficult-to-understand professional vocabularies easily. All the languages used in AWS-Solutions-Architect-Associate real exam were very simple and easy to understand. With our AWS-Solutions-Architect-Associate study guide, you don't have to worry about that you don't understand the content of professional books. You also don't need to spend expensive tuition to go to tutoring class. AWS-Solutions-Architect-Associate Practice Engine can help you solve all the problems in your study.

The Amazon AWS-Solutions-Architect-Associate exam is intended for individuals who have experience in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. Candidates should also have a good understanding of AWS services, security, and compliance. AWS-Solutions-Architect-Associate Exam consists of multiple-choice questions and is available in English, Japanese, Korean, and Simplified Chinese.

Quiz 2026 Unparalleled Amazon AWS-Solutions-Architect-Associate: AWS Certified Solutions Architect - Associate (SAA-C03) Real Questions

Good product can was welcomed by many users, because they are the most effective learning tool, to help users in the shortest possible time to master enough knowledge points, so as to pass the qualification test, and our AWS-Solutions-Architect-Associate learning dumps have always been synonymous with excellence. Our AWS-Solutions-Architect-Associate practice guide can help users achieve their goals easily, regardless of whether you want to pass various qualifying examination, our products can provide you with the learning materials you want. Of course, our AWS-Solutions-Architect-Associate Real Questions can give users not only valuable experience about the exam, but also the latest information about the exam. Our AWS-Solutions-Architect-Associate practical material is a learning tool that produces a higher yield than the other. If you make up your mind, choose us!

Amazon AWS-Solutions-Associate exam is a certification exam for professionals who want to validate their expertise in designing and deploying scalable, highly available, and fault-tolerant systems on Amazon Web Services (AWS) cloud platform. AWS-Solutions-Architect-Associate Exam is intended for solutions architects, developers, and system administrators who have at least one year of hands-on experience in designing and deploying applications on AWS.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q129-Q134):

NEW QUESTION # 129

A company is using a VPC peering strategy to connect its VPCs in a single Region to allow for cross-communication. A recent increase in account creations and VPCs has made it difficult to maintain the VPC peering strategy, and the company expects to grow to hundreds of VPCs. There are also new requests to create site-to-site VPNs some of the VPCs. A solution architect has been tasked with creating a centrally managed networking setup for multiple account, VPCs and VPNs.

Which networking solution these requirements?

- **A. Configure a transit gateway with Transit Gateway and connect all VPCs and VPNs.**
- B. Configure a hub-and-spoke VPC and route all traffic through VPC peering.
- C. Configure shared VPCs and VPNs and share to each other.
- D. Configure an AWS Direct Connect connection between all VPCs and VPNs.

Answer: A

NEW QUESTION # 130

A company has an application hosted on Amazon EC2 instances in two VPCs across different AWS Regions. To communicate with each other, the instances use the internet for connectivity. The security team wants to ensure that no communication between the instances happens over the internet. What should a solutions architect do to accomplish this?

- A. Create a VPN connection and update the route table of the EC2 instances' subnet.
- B. Create a VPC endpoint and update the route table of the EC2 instances' subnet.
- **C. Create a VPC peering connection and update the route table of the EC2 instances' subnet.**
- D. Create a NAT gateway and update the route table of the EC2 instances' subnet.

Answer: C

NEW QUESTION # 131

An organization is setting up a highly scalable application using Elastic Beanstalk. They are using Elastic Load Balancing (ELB) as well as a Virtual Private Cloud (VPC) with public and private subnets. They have the following requirements:

- All the EC2 instances should have a private IP
- All the EC2 instances should receive data via the ELB's.

Which of these will not be needed in this setup?

- **A. Launch the EC2 instances with only the public subnet.**
- B. Create routing rules which will route all inbound traffic from ELB to the EC2 instances.
- C. Create routing rules which will route all outbound traffic from the EC2 instances through NAT.
- D. Configure ELB and NAT as a part of the public subnet only.

Answer: A

Explanation:

Explanation/Reference:

Explanation:

The Amazon Virtual Private Cloud (Amazon VPC) allows the user to define a virtual networking environment in a private, isolated section of the Amazon Web Services (AWS) cloud. The user has complete control over the virtual networking environment. If the organization wants the Amazon EC2 instances to have a private IP address, he should create a public and private subnet for VPC in each Availability Zone (this is an AWS Elastic Beanstalk requirement). The organization should add their public resources, such as ELB and NAT to the public subnet, and AWS Elastic Beanstalk will assign them unique elastic IP addresses (a static, public IP address). The organization should launch Amazon EC2 instances in a private subnet so that AWS Elastic Beanstalk assigns them non-routable private IP addresses. Now the organization should configure route tables with the following rules:

route all inbound traffic from ELB to EC2 instances

route all outbound traffic from EC2 instances through NAT

<http://docs.aws.amazon.com/elasticbeanstalk/latest/dg/AWSHowTo-vpc.html>

NEW QUESTION # 132

A company's security team requests that network traffic be captured in VPC Flow Logs. The logs will be frequently accessed for 90 days and then accessed intermittently.

What should a solutions architect do to meet these requirements when configuring the logs?

- **A. Use Amazon S3 as the target. Enable an S3 Lifecycle policy to transition the logs to S3 Standard- Infrequent Access (S3**

Standard-IA) after 90 days.

- B. Use Amazon CloudWatch as the target. Set the CloudWatch log group with an expiration of 90 days
- C. Use Amazon Kinesis as the target. Configure the Kinesis stream to always retain the logs for 90 days.
- D. Use AWS CloudTrail as the target. Configure CloudTrail to save to an Amazon S3 bucket, and enable S3 Intelligent-Tiering.

Answer: A

Explanation:

There's a table here that specifies that VPC Flow logs can go directly to S3. Does not need to go via CloudTrail and then to S3. Nor via CW. <https://docs.aws.amazon.com/AmazonCloudWatch/latest/logs/AWS-logs-and-resource-policy.html#AWS-logs-infrastructure-S3>

NEW QUESTION # 133

A company is deploying a new two-tier web application in AWS. The company has limited staff and requires high availability, and the application requires complex queries and table joins. Which configuration provides the solution for the company's requirements?

- A. Amazon ElastiCache
- B. Amazon DynamoDB
- C. Amazon RDS for MySQL with Multi-AZ
- D. MySQL Installed on two Amazon EC2 Instances in a single Availability Zone

Answer: C
