## SPLK-1004 Testdump - SPLK-1004 Exam Dumps Demo

Our company is glad to provide customers with authoritative study platform. Our SPLK-1004 quiz torrent was designed by a lot of experts and professors in different area in the rapid development world. At the same time, if you have any question, we can be sure that your question will be answered by our professional personal in a short time. In a word, if you choose to buy our SPLK-1004 Quiz torrent, you will have the chance to enjoy the authoritative study platform provided by our company.

The SPLK-1004 (Splunk Core Certified Advanced Power User) Certification Exam is a valuable certification for professionals who work with the Splunk platform and want to improve their skills in advanced search and reporting techniques. Splunk Core Certified Advanced Power User certification provides a strong validation of an individual's Splunk skills and expertise, and helps them to stand out in the job market. With this certification, professionals can demonstrate that they have the knowledge and expertise required to become a successful Splunk Core Certified Advanced Power User.

## Splunk Core Certified Advanced Power User Sample Questions (Q33-Q38):

### NEW QUESTION # 33

Which statement about tsidx files is accurate?

- A. Splunk updates tsidx files every 30 minutes.
- B. Splunk removes outdated tsidx files every 5 minutes.
- C. Each bucket in each index may contain only one tsidx file.

- **D. A tsidx file consists of a lexicon and a posting list.**

**Answer: D**

Explanation:

A tsidx file contains a lexicon (a list of unique terms) and a posting list (references to occurrences of these terms). This structure supports efficient searching and retrieval of data.

#### **NEW QUESTION # 34**

Where can wildcards be used in the tstats command?

- A. No wildcards can be used with
- B. In the where to clause.
- **C. In the from clause.**
- D. In the by clause.

**Answer: C**

Explanation:

Wildcards can be used in the from clause of the tstats command in Splunk (Option C). The from clause specifies the data model or dataset from which to retrieve the statistics, and using wildcards here allows users to query across multiple data models or datasets that share a common naming pattern, making the search more flexible and encompassing.

#### **NEW QUESTION # 35**

What is the value of base lisy in the Search Job Inspector for the search index=sales clientip=170.192.178.10?

- **A. [ index::sales AND 192 AND 10 AND 178 AND 170 ]**
- B. [ 192 AND 10 AND 178 AND 170 index::sales ]
- C. [ index::sales AND 469 10 702 390 ]
- D. [ AND 10 170 178 192 index::sales ]

**Answer: A**

Explanation:

The base lisy expression represents how Splunk parses and simplifies a search command. In this case, the lisy format shows how Splunk is breaking down the search terms to effectively perform the search.

#### **NEW QUESTION # 36**

How can form inputs impact dashboard panels using inline searches?

- **A. A token in a search can be replaced by a form input value.**
- B. Form inputs can not impact panels using inline searches.
- C. Adding a form input to a dashboard converts all panels to prebuilt panels.
- D. Panels powered by an inline search require a minimum of one form input.

**Answer: A**

Explanation:

Form inputs in Splunk dashboards can dynamically impact the panels using inline searches by allowing a token in the search to be replaced by a form input value (Option A). This capability enables dashboard panels to update their content based on user interaction with the form elements. When a user makes a selection or enters data into a form input, the corresponding token in the search string of a dashboard panel is replaced with this value, effectively customizing the search based on user input. This feature makes dashboards more interactive and adaptable to different user needs or questions.

#### **NEW QUESTION # 37**

Which syntax is used when referencing multiple CSS files in a view?

- A. <dashboard style="custom.css, userapps.css">
- B. <dashboard stylesheet=custom.css stylesheet=userapps.css>
- C. <dashboard stylesheet="custom.css | userapps.css">
- D. <dashboard stylesheet="custom.css, userapps.css">

**Answer: D**

Explanation:

To reference multiple CSS files in a Splunk dashboard, you use the stylesheet attribute with a comma-separated list of file names enclosed in quotes. The correct syntax is:

xml

Copy

1

```
<dashboard stylesheet="custom.css, userapps.css">
```

Here's why this works:

\* stylesheet Attribute : The stylesheet attribute allows you to specify one or more CSS files to style your dashboard.

\* Comma-Separated List : Multiple CSS files are referenced by listing their names separated by commas within a single stylesheet attribute.

\* Quotes : The entire list of CSS files must be enclosed in quotes to ensure proper parsing.

Other options explained:

\* Option A : Incorrect because the pipe (|) character is not valid for separating CSS file names.

\* Option B : Incorrect because the style attribute is not used for referencing CSS files in Splunk dashboards.

\* Option C : Incorrect because the stylesheet attribute cannot be repeated; instead, all CSS files must be listed in a single stylesheet attribute.

Example:

```
<dashboard stylesheet="custom.css, userapps.css">
```

```
<label>Styled Dashboard</label>
```

```
<row>
```

```
<panel>
```

```
<title>Panel Title</title>
```

```
<table>
```

```
<search>
```

```
<query>index=_internal | head 10</query>
```

```
</search>
```

```
</table>
```

```
</panel>
```

```
</row>
```

```
</dashboard>
```
