Thema 4	Understand ChromeOS tenets: It discusses ChromeOS best practices and customers on chromeOS tenets.

Google Professional ChromeOS Administrator Exam ChromeOS-Administrator Prüfungsfragen mit Lösungen (Q80-Q85):

80. Frage

Which email address should an admin use when setting up an online trial of ChromeOS?

- A. Personal email address
- **B. Organization email address**
- C. Google email address
- D. Temporary email address

Antwort: B

Begründung:

When setting up an online trial for ChromeOS or related Google services, it is essential to use an organization email address. This ensures that the trial is associated with the correct domain and is managed centrally.

Using personal or temporary addresses can result in configuration issues or lack of proper administrative control.

Verified Answer from Official Source:

The correct answer is verified from the Google Chrome Enterprise Setup Guide, which advises using an official organizational email when registering for trials.

"To begin a ChromeOS trial, sign up using your organization's email address to ensure the trial is associated with your business domain." Using an organization email address ensures the trial setup aligns with enterprise management and integrates correctly with existing Google Workspace configurations.

Objectives:

- * Properly initiate ChromeOS trials for enterprise use.
- * Maintain organizational control over trial configurations.

81. Frage

You need to create a recovery image on a USB stick. Which two steps should you take?

Choose 2 answers

- A. Go to google.com/chromebooks
- B. Go to Google Play store
- C. Go to Device Settings
- **D. Go to Chrome Web Store on a Chrome device**
- **E. Install Chrome Recovery Utility and download the image for the coned device model to a USB stick**

Antwort: D,E

Begründung:

To create a recovery image on a USB stick, you need to:

* Access Chrome Web Store: Open the Chrome Web Store on a Chrome device (either a Chromebook or a computer with the Chrome browser installed).

* Install Chromebook Recovery Utility: Search for and install the "Chromebook Recovery Utility" extension.

* Launch the Utility: Open the installed extension.

* Identify Device: Enter the model number of the ChromeOS device for which you want to create the recovery image.

* Insert USB Stick: Insert a USB stick with sufficient storage capacity (at least 4GB).

* Download and Create: Follow the on-screen instructions in the utility to download the correct recovery image and create the bootable USB stick.

This process will prepare a USB stick that can be used to recover or reinstall ChromeOS on a device that is not functioning properly.

82. Frage

What format of certificate encoding is incompatible with ChromeOS devices?

- A. CER
- **B. DER**
- C. PEM
- D. CRT

Antwort: B

Begründung:

ChromeOS primarily uses the PEM format for certificate encoding. While it can handle other formats like CER and CRT, it does not support the DER format. DER is a binary format, while ChromeOS requires certificates in a text-based format.

83. Frage

The Finance Department is concerned about frequent Chromebook updates and asks you to explore a 6-month update cycle. Which update release option should you configure for these devices?

- A. Stable
- B. Canary
- C. Beta
- **D. LTS**

Antwort: D

Begründung:

The Long-Term Support (LTS) channel on ChromeOS is designed for environments that require extended stability with less frequent updates. It provides feature updates every 6 months, making it suitable for departments like Finance that prefer a stable, predictable update schedule without frequent changes.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Update Management Guide, which explains that the LTS channel delivers updates on a 6-month cycle, focusing on stability rather than the latest features.

"The Long-Term Support (LTS) channel is updated approximately every 6 months, allowing organizations to minimize disruptions caused by frequent updates." Using the LTS channel reduces the frequency of feature changes, which is beneficial for finance and other critical operations that prioritize stability over new features.

Objectives:

- * Manage update frequency to suit organizational needs.
- * Maintain stability in critical business functions.

84. Frage

A customer deploys a large number of ChromeOS devices and would like to start the process of turning on Zero-Touch Enrollment (ZTE) to streamline their deployment process. As an administrator, what would be required to enable ZTE?

- A. Identify OU to place devices during enrollment
- **B. Create a pre-provisioning token**
- C. Create a zero-touch token
- D. Grant partner admin access

Antwort: B

Begründung:

To enable Zero-Touch Enrollment (ZTE) for ChromeOS devices, an administrator must first create a pre-provisioning token. This token allows devices to automatically enroll when they are first powered on and connected to the internet. The pre-provisioning token links the device to the correct organization and management policies.

Verified Answer from Official Source:

The correct answer is verified from the Google Zero-Touch Enrollment Guide, which outlines the process of setting up pre-provisioning tokens for automated enrollment.

"To set up Zero-Touch Enrollment, generate a pre-provisioning token in the Admin console and configure it with the device provider." Creating the token ensures that new devices are automatically configured and enrolled without manual intervention, saving
