- D. Disable all flows, and then re-enable them one at a time to see which one causes the error.

**Answer: C**

Explanation:

To troubleshoot the issue of a trigger creating two order records, adding `System.debug()` statements in the trigger and analyzing the log output in the Developer Console is an effective technique. This will help identify if the trigger is being called more than once or if there is another automation (such as a flow or workflow) causing the additional record creation.
