AZ-500 Reliable Test Vce & Latest AZ-500 Exam Topics

In today's competitive industry, only the brightest and most qualified candidates are hired for high-paying positions. Obtaining Microsoft Microsoft Azure Security Technologies is a wonderful approach to be successful because it can draw in prospects and convince companies that you are the finest in your field. Pass the Microsoft Azure Security Technologies exam to establish your expertise in your field and receive certification. However, passing the Microsoft Azure Security Technologies AZ-500 Exam is challenging.

Microsoft AZ-500 Certification is a valuable credential for IT professionals who work with Azure environments. It demonstrates their expertise in securing Azure environments against various threats and vulnerabilities. It also helps them stand out from their peers and provides them with opportunities for career advancement.

Microsoft Azure Security Technologies Sample Questions (Q481-Q486):

NEW QUESTION # 481

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Description
RG1	Resource group	Used to store virtual machines
RG2	Resource group	Used to store virtual networks
ServerAdmins	Security group	Used to manage virtual machines

You need to ensure that ServerAdmins can perform the following tasks:

Create virtual machine to the existing virtual network in RG2 only.

The solution must use the principle of least privilege.

Which two role-based access control (RBAC) roles should you assign to ServerAdmins? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. the Contributor role for the subscription
- B. A custom RBAC role for the subscription
- C. the Network Contributor role for RG1.
- **D. the Virtual Machine Contributor role for RG1.**
- **E. a custom RBAC role for RG2**
- F. the Network Contributor role for RG2

Answer: D,E

NEW QUESTION # 482

You have the Azure resource shown in the following table.

Name	Type	Parent
Management1	Management group	Tenant Root Group
Subscription1	Subscription	Management1
RG1	Resource group	Subscription1
RG2	Resource group	Subscription1
VM1	Virtual machine	RG1
VM2	Virtual machine	RG2

You need to meet the following requirements:

* Internet-facing virtual machines must be protected by using network security groups (NSGs).

* All the virtual machines must have disk encryption enabled.

What is the minimum number of security that you should create in Azure Security Center?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

NEW QUESTION # 483

You have an Azure subscription that contains the virtual machines shown in the following table.

Subnet1 and Subnet2 have a network security group (NSG). The NSG has an outbound rule that has the following configurations:

* Port: Any

* Source: Any

* Priority: 100

* Action: Deny

* Protocol: Any

* Destination: Storage

The subscription contains a storage account named storage1.

You create a private endpoint named Private1 that has the following settings:

* Resource type: Microsoft.Storage/storageAccounts

* Resource: storage1

* Target sub-resource: blob

* Virtual network: VNet1

* Subnet: Subnet1

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
From VM2, you can create a container in storage1.	<input type="radio"/>	<input type="radio"/>
From VM1, you can upload data to the blob storage of storage1.	<input type="radio"/>	<input type="radio"/>
From VM2, you can upload data to the blob storage of storage1.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
From VM2, you can create a container in storage1.	<input type="radio"/>	<input checked="" type="radio"/>
From VM1, you can upload data to the blob storage of storage1.	<input checked="" type="radio"/>	<input type="radio"/>
From VM2, you can upload data to the blob storage of storage1.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION # 484

You need to ensure that the Azure AD application registration and consent configurations meet the identity and access requirements. What should you use in the Azure portal? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

To configure the registration settings:

- Azure AD – User settings
- Azure AD – App registrations settings
- Enterprise Applications – User settings

To configure the consent settings:

- Azure AD – User settings
- Azure AD – App registrations settings
- Enterprise Applications – User settings

Answer:

Explanation:

To configure the registration settings:

- Azure AD – User settings
- Azure AD – App registrations settings
- Enterprise Applications – User settings

To configure the consent settings:

- Azure AD – User settings
- Azure AD – App registrations settings
- Enterprise Applications – User settings

NEW QUESTION # 485

You work at a company named Contoso, Ltd. that has the offices shown in the following table.

Name	IP address space
Boston	180.15.10.0/24
Seattle	132.32.15.0/24

Contoso has an Azure Active Directory (Azure AD) tenant named contoso.com. All contoso.com users have Azure Multi-Factor Authentication (MFA) enabled. The tenant contains the users shown in the following table.

Name	User device	Last sign-in	During last sign-in, user selected Don't ask again for 14 days
User1	Device1	June 1	Yes
User2	Device2	June 3	No

The multi-factor settings for contoso.com are configured as shown in the following exhibit.

multi-factor authentication

users service settings

app passwords [\(learn more\)](#)

- Allow users to create app passwords to sign in to non-browser apps
- Do not allow users to create app passwords to sign in to non-browser apps

trusted ips [\(learn more\)](#)

- Skip multi-factor authentication for requests from federated users on my intranet
- Skip multi-factor authentication for requests from following range of IP address subnets

180.15.10.0/24

verification options [\(learn more\)](#)

Methods available to users:

- call to phone
- Text message to phone
- Notification through mobile app
- Verification code from mobile app or hardware token

remember multi-factor authentication [\(learn more\)](#)

- Allow users to remember multi-factor authentication on devices they trust
- Days before a device must re-authenticate (1-60):

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
When User1 signs in to Device1 from the Seattle office on June 10, the user will be prompted for MFA.	<input type="radio"/>	<input type="radio"/>
When User2 signs in to Device2 from the Boston office on June 5, the user will be prompted for MFA.	<input type="radio"/>	<input type="radio"/>
When User1 signs in to to a new device from the Seattle office on June 7, the user will be prompted for MFA.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Statements	Yes	No
When User1 signs in to Device1 from the Seattle office on June 10, the user will be prompted for MFA.	<input type="radio"/>	<input checked="" type="radio"/>
When User2 signs in to Device2 from the Boston office on June 5, the user will be prompted for MFA.	<input checked="" type="radio"/>	<input type="radio"/>
When User1 signs in to to a new device from the Seattle office on June 7, the user will be prompted for MFA.	<input checked="" type="radio"/>	<input type="radio"/>
