SAP C-ACDET-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	<ul style="list-style-type: none"> Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 3	<ul style="list-style-type: none"> Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q30-Q35):

NEW QUESTION # 30

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. InternalContractWorkspace and SalesContractWorkspace
- B. ContractRequest
- C. SalesContractRequest and InternalContractRequest
- D. AbstractContractWorkspace

Answer: A

Explanation:

TheContractWorkspace class is a parent class to both InternalContractWorkspace and SalesContractWorkspaceclasses in SAP Ariba. When a custom field is added to ContractWorkspace, it automatically inherits down to both these subclasses, making the field available in both internal and sales contract workspace types. It does not propagate upward to AbstractContractWorkspace or into contract request classes. This inheritance model is part of SAP Ariba's class hierarchy to ensure consistent data structures across related contract objects.

NEW QUESTION # 31

During the configuration of a new custom field, after it's been saved but before the field has been Published, you realize that you set the wrong type of the field.

What is the next step you should take to resolve the issue?

- A. Change the field Type by selecting the intended type in the dropdown and Save
- B. Clear and recreate the field with same field name and the intended field type
- C. Delete the field and create a new field with the same name and the intended field type
- D. Mark the field as Hidden, and create a new field with a slightly different name and the intended field Type

Answer: C

NEW QUESTION # 32

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field change value, your custom field does not change.

What scenarios could cause this? Note: There are 3 correct answers to this question.

- A. Your dependent field does not have the property Refresh screen on value change enabled
- B. The defaulting Expression sets a value that violates the custom field Validity Condition
- C. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- D. The parameter Application.Base.RecomputeValueOnFieldChange is not enabled
- E. Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field

Answer: A,C,E

NEW QUESTION # 33

Which of the following accurately describes the migration of flex master data templates using the migration tool?

- A. The templates are migrated by the tool, but the data must be loaded manually later.

- B. Both the templates and their data are fully migrated by the tool.
- C. Only the data of the flex master data templates is migrated; templates must be created manually.
- D. Neither the templates nor the data is migrated using the tool

Answer: A

NEW QUESTION # 34

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- **A. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab**
- B. Enable field property "Enable for Template Field Setter" in the Advanced tab
- C. Load Relation types and Relation entries
- D. Define a Visibility Condition in the Conditions tab
- E. Enable field property "Use relationship chooser" in the Advanced tab

Answer: A

Explanation:

To filter a custom field's available values based on another field's value in SAP Ariba, you populate the "Relation Name" and "NameTableConstraintFieldPath" properties in the field's Advanced tab. This configuration links the field to a predefined relation type and specifies the constraint field used for filtering.

Simply loading relation types (B) is a prerequisite but does not configure filtering on the field itself. Visibility conditions (C) control whether a field is shown, not the filtering of its values. Enabling "Use relationship chooser" (D) is necessary but insufficient alone without defining the relation and constraint field. The "Enable for Template Field Setter" (E) option is unrelated to filtering.

This filtering enables dynamic picklists where options depend on another field's selection, improving data accuracy and user experience.
