High Development-Lifecycle-and-Deployment-Architect Quality

Not only our Salesforce Development-Lifecycle-and-Deployment-Architect study guide has the advantage of high-quality, but also has reasonable prices that are accessible for every one of you. So it is incumbent upon us to support you. On the other side, we know the consumers are vulnerable for many exam candidates are susceptible to ads that boost about Salesforce Development-Lifecycle-and-Deployment-Architect skills their practice with low quality which may confuse exam candidates like you, so we are trying hard to promote our high quality Development-Lifecycle-and-Deployment-Architect study guide to more people.

Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q84-Q89):

NEW QUESTION # 84
Universal Containers has multiple project learns building into single org. The project teams are concerned with design conflicts and ensuring a common design process What should an Architect recommend to prevent this conflict?

- A. Create a Center of Excellence Charter document.
- B. Create a Release Management process.
- C. Create a backup system using GIT Repositories.
- D. Create Design Standard for Governance.

Answer: D

Explanation:
Design standards can help ensure consistency and quality of the code and configuration across multiple project teams. They can also prevent design conflicts and reduce technical debt.

NEW QUESTION # 85
Universal Containers has automated its deployment process using Metadata API. However, they found that Metadata API doesn't support all the components yet. What should be done to address this?

- A. Use change sets for deploying all the unsupported components.
- B. Use the force.com IDE for deploying the unsupported components.
- C. Use AppExchange products to deploy unsupported components.
- D. Deploy unsupported components manually before/after deployment.

Answer: D

Explanation:
Deploying unsupported components manually before/after deployment is the best way to address the issue of Metadata API not supporting all the components yet. Metadata API is a powerful tool for deploying changes between orgs, but it does not cover all the metadata types that are available in Salesforce. Some examples of unsupported components are email templates, dashboards, reports, and custom settings. These components need to be deployed manually by using other tools or methods, such as change sets, data loader, or manual configuration.

NEW QUESTION # 86
Universal Containers is having trouble deploying metadata from SIT to UAT. UAT is complaining that it does not recognize some new Salesforce metadata types to be deployed. The deployment from Dev to SIT worked perfectly What could be the problem?

- A. SIT is on a preview release and UAT is not.
- B. There is no problem, this is expected behavior.
- C. Use the DX command line instead.
- D. UAT is on a preview release and SIT is not.

Answer: D

Explanation:
The problem is that UAT is on a preview release and SIT is not. A preview release is a version of Salesforce that contains the features and enhancements that will be available in the next major release. Preview releases are usually available a few weeks before

the official release date, and they are assigned to a subset of instances. If UAT and SIT are on different instances, they may have different release versions, which can cause deployment issues. For example, if UAT has a preview release that contains some new metadata types that are not available in SIT, then deploying those metadata types from SIT to UAT will fail. To avoid this problem, the architect should check the Sandbox Preview Guide1 and the Release Notes2 to see if there are any changes that affect the deployment, and refresh and redeploy the sandboxes accordingly. There is a problem, and it is not expected behavior. Using the DX command line instead will not solve the problem, as it will still encounter the same version mismatch. SIT is not on a preview release and UAT is not, as that would not cause any deployment issues.

NEW QUESTION # 87

Universal Containers is a Salesforce AppExchange partner and they are planning to launch recommended that they use a partner development org for development. New app. The technical architect What are the three benefits of using a partner development org over an individual development org in this scenario?
Choose 3 answers

- A. Partner development org offers higher API limit.
- B. Only partner development org supports managed beta testing.
- C. Partner development org never expires.
- D. Partner development org has a greater number of licenses available for the team.
- E. Partner development org offers more storage.

Answer: A,D,E

Explanation:
The three benefits of using a partner development org over an individual development org in this scenario are:
* Partner development org has a greater number of licenses available for the team. This means that the developers can test their app with different user profiles and permissions, and also invite beta testers to provide feedback2.
* Partner development org offers higher API limit. This means that the developers can use more API calls to integrate their app with external systems or services, and also leverage the Salesforce APIs to automate their development and deployment processes2.
* Partner development org offers more storage. This means that the developers can store more data and files in their org, and also use more features and components that require storage, such as Big Objects, Platform Events, or Lightning Web Components2.
The other options are not benefits of using a partner development org over an individual development org in this scenario, because:
* Only partner development org supports managed beta testing. This is not true, as both partner development org and individual development org can create and distribute managed beta packages3.
* Partner development org never expires. This is also not true, as partner development orgs have a 12- month expiration period, which can be extended by request

NEW QUESTION # 88

Universal Containers is a global organization that maintains regional production instances of Salesforce. One region has created a new application to track shipping containers.
The CIO has requested that this new application be used globally by all the Salesforce instances and further maintained and modified regionally by local administrators.
Which two deployment tools will support the request?
Choose 2 answers

- A. VS Code with Salesforce Extension
- B. ANT Migration Tool
- C. Developer Console
- D. Change Sets B

Answer: A,B

Explanation:
The two deployment tools that will support the request are the ANT Migration Tool and VS Code with Salesforce Extension. These tools allow the developers to deploy metadata components from one Salesforce org to another, and also to maintain and modify the code locally in their own machines. Change Sets and Developer Console are not suitable for this scenario, because they do not support deploying to multiple orgs or working offline.

NEW QUESTION # 89
......

Perhaps you still have doubts about our Development-Lifecycle-and-Deployment-Architect study tool. You can contact other buyers to confirm. Our company always regards quality as the most important things. The pursuit of quantity is meaningless. Our company positively accepts annual official quality inspection. All of our Development-Lifecycle-and-Deployment-Architect real exam dumps have passed the official inspection every year. Our study materials are completely reliable and responsible for all customers. The development process of our study materials is strict. We will never carry out the Development-Lifecycle-and-Deployment-Architect real exam dumps that are under researching. All Development-Lifecycle-and-Deployment-Architect Study Tool that can be sold to customers are mature products. We are not chasing for enormous economic benefits. As for a company, we are willing to assume more social responsibility. So our Development-Lifecycle-and-Deployment-Architect real exam dumps are manufactured carefully, which could endure the test of practice. Stable and healthy development is our long lasting pursuit. In order to avoid fake products, we strongly advise you to purchase our Development-Lifecycle-and-Deployment-Architect exam question on our official website.
