

HOT HPE7-A06 Mock Exam - HP HPE Campus Access Switching Expert Written Exam - Trustable HPE7-A06 Exam Vce Format

BTW, DOWNLOAD part of Prep4away HPE7-A06 dumps from Cloud Storage: <https://drive.google.com/open?id=1wz-TyZFWfX94TSZwC02jesGXRvqfP0oS>

We know the certificate of HPE7-A06 exam guide is useful and your prospective employer wants to see that you can do the job with strong prove, so our HPE7-A06 study materials could be your opportunity. Our HPE7-A06 practice dumps are sensational from the time they are published for the importance of HPE7-A06 Exam as well as the efficiency of our HPE7-A06 training engine. And we can help you get success and satisfy your eager for the certificate.

Our company attaches great importance to overall services on our HPE7-A06 study guide, if there is any problem about the delivery of HPE7-A06 exam materials, please let us know, a message or an email will be available. And no matter when you send us your information on the HPE7-A06 Practice Engine, our kind and considerate online service will give you help since we provide our customers with assistant on our HPE7-A06 training prep 24/7.

>> HPE7-A06 Mock Exam <<

Pass HPE7-A06 Exam with Unparalleled HPE7-A06 Mock Exam by Prep4away

If you want to get the HPE7-A06 certification to improve your life, we can tell you there is no better alternative than our HPE7-A06 exam questions. The HPE7-A06 test torrent also offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation. Our product is affordable and good, if you choose our products, we can promise that our HPE7-A06 Exam Torrent will not let you down.

HPE Campus Access Switching Expert Written Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

Refer to the exhibit.

A conference venue has a requirement to secure independent network users from each other in their network. What can be done to prevent clients from communicating with each other using the customer's equipment?

- A. With Edge-1 and Edge-2 connected clients, an isolated VLAN can be used.
- B. With Edge-1 connected clients, an isolated VLAN can be used.
- C. With Edge-2 connected clients, an isolated VLAN can be used.

- D. With Edge-1 and Edge-2 connected clients, a community VLAN can be used.

Answer: A

Explanation:

To secure independent users from communicating with each other, the correct approach is to configure an isolated VLAN. In an isolated VLAN, clients can reach the default gateway for external access but cannot communicate directly with other clients in the same VLAN. Since clients connect through both Edge-1 and Edge-2, the isolated VLAN must be applied on both switches to ensure complete client isolation across the venue.

NEW QUESTION # 20

Drag and Drop Question

Match the customer requirement with commands used to partially configure the network technology used to fulfill the requirement.

□

Answer:

Explanation:

□

NEW QUESTION # 21

Network administrators are reporting that switches are taking a very long time to execute commands. Based on the configuration below, what is the most likely cause of the issue?

□

- A. Too many administrators are logged in
- B. A Denial of Service attack on the data plane.
- C. Authentication fail-through is enabled
- **D. The primary TACACS+ server is unreachable**

Answer: D

Explanation:

The configuration shows two TACACS+ servers (10.1.1.1 and 10.1.1.2) with fail-through enabled.

If the primary TACACS+ server (10.1.1.1) is unreachable, the switch waits for a timeout before trying the secondary server. This delay causes commands to take a very long time to execute, as each authentication attempt has to fail on the primary before moving on.

NEW QUESTION # 22

Refer to the four numbered steps in the exhibit.

□

Which action is the first step in applying a role-to-role ACL on the traffic from mobile device M1 to role H2?

- A. Switch A1 determines the destination role based on destination MAC or destination IP and enforces role-to-role ACLs.
- **B. The AP forwards the packet from M1 to gateway 1.**
- C. The edge switch acts as the intermediate node and transfers the Group Policy ID over static VXLAN to dynamic VXLAN tunnel and forwards the packet to switch A1.
- D. Gateway 1 forwards the traffic over the static VXLAN tunnel to the edge switch, this packet carries the Group Policy ID corresponding to the role of M1.

Answer: B

Explanation:

The question asks for the first step in applying a role-to-role ACL (Access Control List) on traffic from a mobile device (M1) to a role (H2) in a network using Dynamic Segmentation with VXLAN and role-based policies.

* Analysis of Options:

* Option A: Describes an intermediate step where the edge switch transfers the Group Policy ID over VXLAN, which occurs later in the process.

* Option B: Correct. The first step is the AP forwarding the packet from the mobile device (M1) to the gateway, which initiates the traffic flow in a tunneled Dynamic Segmentation setup.

* Option C: Describes a later step where the destination switch (A1) enforces the role-to-role ACL, after the packet has traversed

the network.

* Option D: Describes a step where the gateway forwards traffic over a VXLAN tunnel, which occurs after the AP forwards the packet.

* Why Option B is Correct: In HPE Aruba Networking's Dynamic Segmentation architecture, wireless clients (e.g., M1) connect to an AP, which tunnels traffic to a gateway (e.g., in tunneled mode). The first step in the traffic flow is the AP forwarding the client's packet to the gateway, which then processes the packet for role assignment and policy enforcement. This aligns with the role-to-role ACL application process, where the gateway applies policies based on the source (M1's role) and destination (H2's role) using Group Policy IDs over VXLAN.

* Relevance to Certification Objectives:

* Security (10%): Involves designing and troubleshooting role-based security policies in customer networks.

* WLAN (9%): Includes implementing and troubleshooting wireless traffic flows in Dynamic Segmentation.

* Switching (19%): Covers Layer 2/3 interconnection technologies like VXLAN for policy enforcement.

NEW QUESTION # 23

Two CX 8325 switches are configured as a cluster using VSX for the core role and two CX 6300M in VSF for the aggregation role. When a minor software upgrade is issued on the switches, what is the method to achieve a hitless upgrade with the aggregation switches?

- A. ISSU update-software initiates the upgrade first on the primary switch, followed by the secondary.
- B. ISSU update-software initiates the upgrade first on the secondary switch, followed by the primary.
- C. VSF update-software initiates the software upgrade first on the secondary switch, followed by the primary.
- D. VSF update-software initiates the software upgrade first on the primary switch, followed by the secondary.

Answer: C

Explanation:

The question involves a minor software upgrade on a VSF (Virtual Switching Framework) stack of CX 6300M switches in the aggregation role, with CX 8325 switches in a VSX cluster as the core. The task is to identify the method for a hitless upgrade on the aggregation switches.

* Analysis of Options:

* Option A: Correct. VSF upgrades start with the secondary switch, followed by the primary, to ensure continuous operation without traffic disruption.

* Option B: Incorrect. In-Service Software Upgrade (ISSU) is used for VSX, not VSF, and follows a different process.

* Option C: Incorrect. Upgrading the primary switch first in VSF risks disrupting control plane operations.

* Option D: Incorrect. ISSU is not applicable to VSF upgrades.

* Why Option A is Correct: In a VSF stack, the update-software command initiates a rolling upgrade, starting with the secondary (standby) switch to ensure the primary (commander) continues handling traffic. Once the secondary is upgraded and rejoins the stack, the primary is upgraded, maintaining hitless operation. This process leverages VSF's ability to keep member switches active during upgrades, minimizing downtime. The CX 6300M's VSF implementation supports this hitless upgrade mechanism, as per HPE Aruba Networking documentation.

* Relevance to Certification Objectives:

* Network Resiliency and Virtualization (8%): Designing and troubleshooting VSF for high availability and hitless upgrades.

* Troubleshooting (10%): Ensuring minimal disruption during software upgrades in campus networks.
