

400-007 Practice Guide | Exam 400-007 Price

P.S. Free 2026 Cisco 400-007 dumps are available on Google Drive shared by TestSimulate: https://drive.google.com/open?id=1I8NLN_wkbHoFOrjoPgh6uRb71afq443M

Are you still staying up for the 400-007 exam day and night? If your answer is yes, then you may wish to try our 400-007 exam materials. We are professional not only on the content that contains the most accurate and useful information, but also on the after-sales services that provide the quickest and most efficient assistants. With our 400-007 practice torrent for 20 to 30 hours, we can claim that you are ready to take part in your 400-007 exam and will achieve your expected scores.

Cisco Certified Design Expert (CCDE v3.0) Written Exam, also known as the Cisco 400-007 Exam, is a certification exam that tests the knowledge and skills of network design experts. 400-007 exam is designed to validate the candidate's expertise in the design of complex network solutions and architectures. Cisco Certified Design Expert (CCDE) Written Exam certification is highly respected in the industry and is a prerequisite for many high-level networking positions.

Exam 400-007 Price - New 400-007 Dumps Files

TestSimulate Cisco Certified Design Expert (CCDE) Written Exam (400-007) practice exam (desktop and web-based) keep track of the previous attempts. These Cisco Certified Design Expert (CCDE) Written Exam (400-007) practice tests also show mistakes on every attempt. So this feature helps you reduces your chance of failure in the 400-007 actual examination. The Cisco 400-007 Exam Questions are instantly downloadable right after your purchase. In the same way, TestSimulate provides a money back guarantee if in any case you don't ace the 400-007 exam after using our product. Terms and conditions are mentioned on the guarantee page.

Cisco Certified Design Expert (CCDE) Written Exam Sample Questions (Q114-Q119):

NEW QUESTION # 114

When consumers that leverage IaaS reach 100% resource capacity, what can be used to redirect the overflow of traffic to the public cloud so there is no disruption to service?

- A. Cloud policing
- B. Cloud shaping
- C. Cloud spill
- **D. Cloud bursting**

Answer: D

Explanation:

Cloud Bursting is the process by which applications or workloads that run in a private cloud or data center environment are "bursting" into a public cloud infrastructure during high-demand periods. This prevents service degradation and ensures performance continuity without manual intervention.

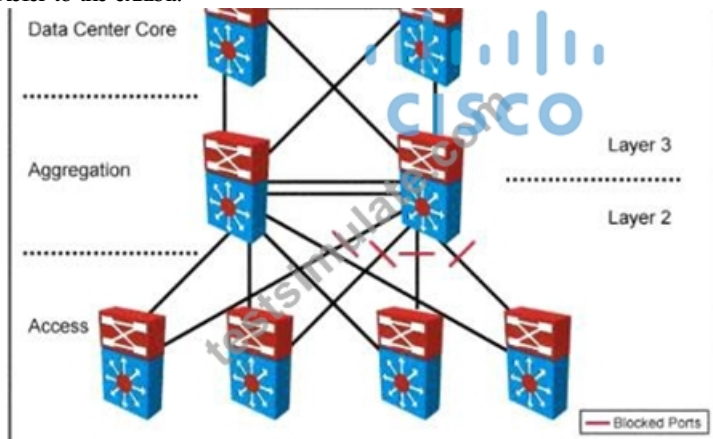

In CCDE design strategy terms, this enables:

- * Elastic scalability
- * Cost-effective use of public infrastructure on-demand
- * Seamless service delivery to end users

Options like "cloud policing" and "cloud shaping" are not standard terms, and "cloud spill" is not an established mechanism. "Cloud bursting" is the correct architectural mechanism that addresses this overflow requirement.

NEW QUESTION # 115

Refer to the exhibit.

Your company designed a network to allow server VLANs to span all access switches in a data center. In the design, Layer 3 VLAN interfaces and HSRP are configured on the aggregation switches. Which two features improve STP stability within the network design? (Choose two.)

- A. BPDU guard on the aggregation switch downlinks toward access switches
- B. edge port on access ports
- C. access switch pairs explicitly determined to be root and backup root bridges
- D. root guard on the aggregation switch downlinks toward access switches
- E. BPDU guard on access ports
- F. root guard on access ports

Answer: B,E

NEW QUESTION # 116

Which three items do you recommend for control plane hardening of an infrastructure device? (Choose three.)

- A. redundant AAA servers
- B. warning banners
- C. to enable unused .services
- D. routing protocol authentication
- E. Control Plane Policing
- F. SNMPv3

Answer: D,E,F

NEW QUESTION # 117

An enterprise solution team is performing an analysis of multilayer architecture and multicontroller SDN solutions for multisite deployments. The analysis focuses on the ability to run tasks on any controller via a standardized interface. Which requirement addresses this ability on a multicontroller platform?

- A. Deploy a root controller to gather a complete network-level view.
- **B. Use OpenFlow to implement and adapt new protocols.**
- C. Build direct physical connectivity between different controllers.
- D. Use the East-West API to facilitate replication between controllers within a cluster.

Answer: B

NEW QUESTION # 118

Company XYZ is revisiting the security design for their data center because they now have a requirement to control traffic within a subnet and implement deep packet inspection. Which technology meets the updated requirements and can be incorporated into the design?

- A. Routed firewall
- B. Zone-based firewall on the Layer 3 device
- **C. Transparent firewall**
- D. VLAN ACLs on the switch

Answer: C

Explanation:

* C (Transparent firewall): Operates at Layer 2, allowing filtering and inspection of traffic within the same subnet without requiring IP routing changes. It performs deep packet inspection while maintaining Layer 2 adjacency, making it ideal for intra-subnet traffic control in data centers.

* This allows security segmentation inside broadcast domains, enforcing security policies even for east- west traffic.

Other options explained:

* A: Routed firewalls require subnet boundaries and are not ideal for intra-subnet control.

* B: VLAN ACLs provide basic filtering but lack deep packet inspection capabilities.

* D: Zone-based firewalls are primarily designed for inter-subnet (Layer 3) traffic segmentation.

NEW QUESTION # 119

.....

Our website offers you the most comprehensive 400-007 study guide for the actual test and the best quality service for aftersales. Our customers can easily access and download the 400-007 dumps pdf on many electronic devices including computer, laptop and Mac. Online test engine enjoys great reputation among IT workers because it brings you to the atmosphere of 400-007 Real Exam and remarks your mistakes.
