

Well-known AZ-305 Practice Engine Sends You the Best Training Dumps - It-Tests

DOWNLOAD the newest It-Tests AZ-305 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1vUVWHEFZuq0D2oY1L_PPO9JvHlkNB_eP

The objective of the It-Tests is to give you quick access to Designing Microsoft Azure Infrastructure Solutions (AZ-305) actual questions. Offering Microsoft AZ-305 updated dumps is the only factor behind the dominance of It-Tests in the market. Our customers will see our Designing Microsoft Azure Infrastructure Solutions (AZ-305) questions in the final certification test. We have a devoted team who puts in a lot of effort to keep the AZ-305 questions updated.

Microsoft AZ-305 exam consists of various topics that cover the design and implementation of Azure infrastructure solutions. These topics include designing and deploying Azure compute infrastructure, designing and deploying Azure storage solutions, and designing and implementing Azure networking solutions. AZ-305 exam also covers the design and implementation of Azure security and identity solutions, as well as the design and management of Azure resources.

Microsoft AZ-305 Certification Exam measures the ability of a candidate to design solutions for Microsoft Azure infrastructure. As an expert-level exam, it tests the candidate's proficiency in designing and implementing solutions that are highly scalable, available, and resilient in Microsoft Azure.

Role of Microsoft AZ-305 Exam Real Questions in Exam Success

If you care about your qualification exams and have some queries about AZ-305 preparation materials, we are pleased to serve for you, you can feel free to contact us via email or online service about your doubt. Our company are established more than 10 years, our quality of AZ-305 valid practice test questions are the leading position in this filed. We believe our AZ-305 exam guide will help you pass exam easily without too much spirit & time. All our AZ-305 training materials are compiled painstakingly.

To be eligible to take the Microsoft AZ-305 Exam, candidates must have a good understanding of Microsoft Azure services and should have experience in designing and implementing Azure solutions. They should also have knowledge of Azure tools and technologies such as Azure App Service, Azure Functions, and Azure Logic Apps.

Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q423-Q428):

NEW QUESTION # 423

You are designing an app that will be hosted on Azure virtual machines that run Ubuntu. The app will use a third-party email service

to send email messages to users. The third-party email service requires that the app authenticate by using an API key. You need to recommend an Azure Key Vault solution for storing and accessing the API key. The solution must minimize administrative effort.

What should you recommend using to store and access the key? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION # 424

You have 100 devices that write performance data to Azure Blob Storage.

You plan to store and analyze the performance data in an Azure SQL database.

You need to recommend a solution to continually copy the performance data to the Azure SQL database.

What should you include in the recommendation?

- A. Azure Database Migration Service
- **B. Azure Data Factory**
- C. Azure Data Box
- D. Data Migration Assistant (DMA)

Answer: B

Explanation:

Azure Data Factory - using Data Factory pipelines. Data Factory pipelines can copy data from Azure Blob Storage to an Azure SQL Database. The configuration pattern applies to copying from a file- based data store to a relational data store.

NEW QUESTION # 425

You plan to migrate App1 to Azure.

You need to estimate the compute costs for App1 in Azure. The solution must meet the security and compliance requirements.

What should you use to estimate the costs, and what should you implement to minimize the costs? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION # 426

Your company deploys an Azure App Service Web App.

During testing the application fails under load. The application cannot handle more than 100 concurrent user sessions. You enable the Always On feature. You also configure auto-scaling to increase counts from two to 10 based on HTTP queue length.

You need to improve the performance of the application.

Which solution should you use for each application scenario? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Content Delivery Network

A content delivery network (CDN) is a distributed network of servers that can efficiently deliver web content to users. CDNs store cached content on edge servers in point-of-presence (POP) locations that are close to end users, to minimize latency.

Azure Content Delivery Network (CDN) offers developers a global solution for rapidly delivering high-bandwidth content to users by caching their content at strategically placed physical nodes across the world. Azure CDN can also accelerate dynamic content, which cannot be cached, by leveraging various network optimizations using CDN POPs. For example, route optimization to bypass Border Gateway Protocol (BGP).

Box 2: Azure Redis Cache

Azure Cache for Redis is based on the popular software Redis. It is typically used as a cache to improve the performance and scalability of systems that rely heavily on backend data-stores. Performance is improved by temporarily copying frequently accessed data to fast storage located close to the application. With Azure Cache for Redis, this fast storage is located in-memory with Azure Cache for Redis instead of being loaded from disk by a database.

NEW QUESTION # 427

You have a resource group named RG1 that contains the objects shown in the following table.

□ You need to configure permissions so that App1 can copy all the secrets from KV1 to KV2. App1 currently has the Get permission for the secrets in KV1.

Which additional permissions should you assign to App1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

Explanation

Graphical user interface, text, application Description automatically generated

□ Box 1: List

Get: Gets the specified Azure key vault.

List: The List operation gets information about the vaults associated with the subscription.

Box 2: Create

Create Or Update: Create or update a key vault in the specified subscription.
