Before you buy our Databricks-Certified-Data-Analyst-Associate study questions you can have a free download and tryout and you can have an understanding of our Databricks-Certified-Data-Analyst-Associate exam questions by visiting our pages of our Databricks-Certified-Data-Analyst-Associate learning guide on the website. The pages of our Databricks-Certified-Data-Analyst-Associate guide torrent provide the demo and you can understand part of our titles and the form of our software. So before your purchase you can have an understanding of our Databricks-Certified-Data-Analyst-Associate Exam Questions and then decide whether to buy our Databricks-Certified-Data-Analyst-Associate study questions or not.

Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.
Topic 2	Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moreover, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.
Topic 3	Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.

Topic 4	• Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints • warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint • warehouses, trade-off between cluster size and cost for Databricks SQL endpoints • warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.
Topic 5	• Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.

Exam Databricks-Certified-Data-Analyst-Associate Preparation, Reliable Databricks-Certified-Data-Analyst-Associate Cram Materials

About some esoteric points, they illustrate with examples for you. Our Databricks-Certified-Data-Analyst-Associate practice materials are the accumulation of professional knowledge worthy practicing and remembering, so you will not regret choosing our Databricks-Certified-Data-Analyst-Associate practice materials. The best way to gain success is not cramming, but to master the discipline and regular exam points of question behind the tens of millions of questions. Our Databricks-Certified-Data-Analyst-Associate practice materials can remove all your doubts about the exam. If you believe in our products this time, you will enjoy the happiness of success all your life.

Databricks Certified Data Analyst Associate Exam Sample Questions (Q61-Q66):

NEW QUESTION # 61

A data analyst has created a Query in Databricks SQL, and now wants to create two data visualizations from that Query and add both of those data visualizations to the same Databricks SQL Dashboard.

Which step will the data analyst need to take when creating and adding both data visualizations to the Databricks SQL Dashboard?

- **A. Add two separate visualizations to the dashboard based on the same Query.**
- B. Copy the Query and create one data visualization per query.
- C. Decide on a single data visualization to add to the dashboard.
- D. Alter the Query to return two separate sets of results.

Answer: A

NEW QUESTION # 62

Where in the Databricks SQL workspace can a data analyst configure a refresh schedule for a query when the query is not attached to a dashboard or alert?

- A. The Visualization editor
- B. Data explorer
- C. The Dashboard Editor
- **D. The Query Editor**

Answer: D

Explanation:

In Databricks SQL, to configure a refresh schedule for a query that is not attached to a dashboard or alert, a data analyst should use the Query Editor. Within the Query Editor, there is an option to set up scheduled executions for queries. This feature enables the

query to run at specified intervals, ensuring that the results are updated regularly. By scheduling queries in this manner, analysts can automate data refreshes and maintain up-to-date query results without manual intervention.

NEW QUESTION # 63

A data analyst has created a Query in Databricks SQL, and now they want to create two data visualizations from that Query and add both of those data visualizations to the same Databricks SQL Dashboard.

Which of the following steps will they need to take when creating and adding both data visualizations to the Databricks SQL Dashboard?

- A. They will need to copy the Query and create one data visualization per query.
- B. They will need to decide on a single data visualization to add to the dashboard.
- **C. They will need to add two separate visualizations to the dashboard based on the same Query.**
- D. They will need to alter the Query to return two separate sets of results.
- E. They will need to create two separate dashboards.

Answer: C

Explanation:

A data analyst can create multiple visualizations from the same query in Databricks SQL by clicking the + button next to the Results tab and selecting Visualization. Each visualization can have a different type, name, and configuration. To add a visualization to a dashboard, the data analyst can click the vertical ellipsis button beneath the visualization, select + Add to Dashboard, and choose an existing or new dashboard. The data analyst can repeat this process for each visualization they want to add to the same dashboard.

Reference: Visualization in Databricks SQL, Visualize queries and create a dashboard in Databricks SQL

NEW QUESTION # 64

What is a benefit of using Databricks SQL for business intelligence (BI) analytics projects instead of using third-party BI tools?

- A. Automated alerting systems
- B. Advanced dashboarding capabilities
- **C. Computations, data, and analytical tools on the same platform**
- D. Simultaneous multi-user support

Answer: C

Explanation:

Databricks SQL offers a unified platform where computations, data storage, and analytical tools coexist seamlessly. This integration allows business intelligence (BI) analytics projects to be executed more efficiently, as users can perform data processing and analysis without the need to transfer data between disparate systems. By consolidating these components, Databricks SQL streamlines workflows, reduces latency, and enhances data governance. While third-party BI tools may offer advanced dashboarding capabilities, simultaneous multi-user support, and automated alerting systems, they often require integration with separate data processing platforms, which can introduce complexity and potential inefficiencies.

NEW QUESTION # 65

Which of the following describes how Databricks SQL should be used in relation to other business intelligence (BI) tools like Tableau, Power BI, and Looker?

- A. As a complete replacement with additional functionality
- B. As a complementary tool for professional-grade presentations
- C. As an exact substitute with the same level of functionality
- **D. As a complementary tool for quick in-platform BI work**
- E. As a substitute with less functionality

Answer: D

Explanation:

Databricks SQL is not meant to replace or substitute other BI tools, but rather to complement them by providing a fast and easy way to query, explore, and visualize data on the lakehouse using the built-in SQL editor, visualizations, and dashboards. Databricks SQL also integrates seamlessly with popular BI tools like Tableau, Power BI, and Looker, allowing analysts to use their preferred

tools to access data through Databricks clusters and SQL warehouses. Databricks SQL offers low-code and no-code experiences, as well as optimized connectors and serverless compute, to enhance the productivity and performance of BI workloads on the lakehouse.
