

Exam DP-300 Consultant - DP-300 New Dumps Ebook

2026 Latest Valid Braindumps DP-300 PDF Dumps and DP-300 Exam Engine Free Share: <https://drive.google.com/open?id=1i3ufAhu5C4B93wjW4Ts75lvOCR2fnnS7>

With the high class operation system, we can assure you that you can start to prepare for the DP-300 exam with our study materials only 5 to 10 minutes after payment since our advanced operation system will send the DP-300 exam torrent to your email address automatically as soon as possible after payment. Most important of all, as long as we have compiled a new version of the DP-300 Guide Torrent, we will send the latest version of our DP-300 training materials to our customers for free during the whole year after purchasing. We will continue to bring you integrated DP-300 guide torrent to the demanding of the ever-renewing exam, which will be of great significance for you to keep pace with the times.

The DP-300 Certification is ideal for database administrators, database developers, and data engineers who want to demonstrate their expertise in managing and maintaining relational databases on the Azure platform. Administering Relational Databases on Microsoft Azure certification validates the candidate's ability to manage and secure database environments, troubleshoot common issues, and optimize database performance for maximum efficiency. It is also a great way to showcase your skills and expertise to potential employers and advance your career in the field of database management.

DP-300 New Dumps Ebook, Test DP-300 Questions Answers

Investing in a Administering Relational Databases on Microsoft Azure (DP-300) certification is essential for professionals looking to advance their careers and stay competitive in the job market. With our actual Microsoft DP-300 questions PDF, DP-300 practice exams along with the support of our customer support team, you can be confident that you are getting the best possible DP-300 Preparation material for the test. Download Real DP-300 questions today and start your journey to success.

Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q292-Q297):

NEW QUESTION # 292

You have an Azure SQL database named db1 on a server named server1.

The Intelligent Insights diagnostics log identifies queries that cause performance issues due to tempDB contention.

You need to resolve the performance issues.

What should you do?

- A. Run the dbcc dbreindex command.
- B. Replace the sequential index keys with nonsequential keys.
- C. Implement memory-optimized tables.
- D. Run the dbcc flushprocindB command.

Answer: C

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/database/intelligent-insights-troubleshoot-performance#tempdb-contention>

NEW QUESTION # 293

You need to design an analytical storage solution for the transactional data. The solution must meet the sales transaction dataset requirements.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE:Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation

Graphical user interface, text, application Description automatically generated

□ Box 1: Hash

Scenario:

Ensure that queries joining and filtering sales transaction records based on product ID complete as quickly as possible.

A hash distributed table can deliver the highest query performance for joins and aggregations on large tables.

Box 2: Round-robin

Scenario:

You plan to create a promotional table that will contain a promotion ID. The promotion ID will be associated to a specific product.

The product will be identified by a product ID. The table will be approximately 5 GB.

A round-robin table is the most straightforward table to create and delivers fast performance when used as a staging table for loads.

These are some scenarios where you should choose Round robin distribution:

When you cannot identify a single key to distribute your data.

If your data doesn't frequently join with data from other tables.

When there are no obvious keys to join.

NEW QUESTION # 294

You have an Azure Synapse Analytics Apache Spark pool named Pool1.

You plan to load JSON files from an Azure Data Lake Storage Gen2 container into the tables in Pool1. The structure and data types vary by file.

You need to load the files into the tables. The solution must maintain the source data types.

What should you do?

- A. Use a Get Metadata activity in Azure Data Factory.
- **B. Load the data by using the OPENROWSET Transact-SQL command in an Azure Synapse Analytics serverless SQL pool.**
- C. Load the data by using PySpark.
- D. Use a Conditional Split transformation in an Azure Synapse data flow.

Answer: B

Explanation:

Section: [none]

Explanation:

Serverless SQL pool can automatically synchronize metadata from Apache Spark. A serverless SQL pool database will be created for each database existing in serverless Apache Spark pools.

Serverless SQL pool enables you to query data in your data lake. It offers a T-SQL query surface area that accommodates semi-structured and unstructured data queries.

To support a smooth experience for in place querying of data that's located in Azure Storage files, serverless SQL pool uses the OPENROWSET function with additional capabilities.

The easiest way to see the content of your JSON file is to provide the file URL to the OPENROWSET function, specify csv FORMAT.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql/query-json-files>

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql/query-data-storage>

NEW QUESTION # 295

You have a new Azure subscription.

You create an Azure SQL Database instance named DB1 on an Azure SQL Database server named Server1.

You need to ensure that users can connect to DB1 in the event of an Azure regional outage. In the event of an outage, applications that connect to DB1 must be able to connect without having to update the connection strings.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a new Azure SQL Database instance named DB2.
- **B. From the properties of Server1 add a failover group.**
- C. From the properties of Server1 configure retention for DB1
- D. From the properties of DB1. configure geo-replication.
- **E. Create a new Azure SQL Database server named Server2.**

Answer: B,E

Explanation:

B: The auto-failover groups feature allows you to manage the replication and failover of some or all databases on a logical server to another region.

C: The auto-failover group must be configured on the primary server and will connect it to the secondary server in a different Azure region.

Incorrect:

Not A: Geo-replication failovers require client applications to change their connection strings.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/database/auto-failover-group-overview?tabs=azure-powershell#best-practices-for-sql-database>

<https://docs.microsoft.com/en-us/azure/azure-sql/database/failover-group-add-single-database-tutorial?tabs=azure-portal>

NEW QUESTION # 296

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Synapse Analytics dedicated SQL pool that contains a table named Table1.

You have files that are ingested and loaded into an Azure Data Lake Storage Gen2 container named container1.

You plan to insert data from the files into Table1 and transform the data. Each row of data in the files will produce one row in the serving layer of Table1.

You need to ensure that when the source data files are loaded to container1, the DateTime is stored as an additional column in Table1.

Solution: You use an Azure Synapse Analytics serverless SQL pool to create an external table that has an additional DateTime column.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

In dedicated SQL pools you can only use Parquet native external tables. Native external tables are generally available in serverless SQL pools.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql/create-use-external-tables>

NEW QUESTION # 297

.....

To attempt the Microsoft DP-300 exam optimally and ace it on the first attempt, proper exam planning is crucial. Since the Administering Relational Databases on Microsoft Azure (DP-300) exam demands a lot of time and effort, we designed the Administering Relational Databases on Microsoft Azure (DP-300) exam dumps in such a way that you won't have to go through sleepless study nights or disturb your schedule. Before starting the Administering Relational Databases on Microsoft Azure (DP-300) preparation, plan the amount of time you will allot to each topic, determine the topics that demand more effort and prioritize the components that possess more weightage in the Administering Relational Databases on Microsoft Azure (DP-300) exam.
