

Exam Oracle 1z0-071 Braindumps & 1z0-071 Reliable Exam Tips

What's more, part of that Easy4Engine 1z0-071 dumps now are free: <https://drive.google.com/open?id=15xVIJkUEZDnBjaPk33gUrFRiciAf40bP>

The Oracle Database SQL (1z0-071) product can be easily accessed just after purchasing it from Easy4Engine. You can receive free Oracle Dumps updates for up to 1 year after buying material. The 24/7 support system is also available for you, which helps you every time you get stuck somewhere. Many students have studied from the Easy4Engine Oracle 1z0-071 practice material and rated it positively because they have passed the Oracle Database SQL (1z0-071) certification exam on the first try.

Topics of ORACLE 1z0-071 Certification Exam

Oracle 1z0-071 Dumps covers the following topics of the ORACLE 1z0-071 exam.

- SQL Performance Tuning
- Oracle Architecture
- SQL Fundamentals
- Data Integrity and Recovery
- Indexing and Partitioning
- XML Fundamentals
- Oracle Database Concepts
- Data Management Concepts

Oracle 1z0-071 Reliable Exam Tips, 1z0-071 Valid Exam Pdf

The test software used in our products is a perfect match for Windows' 1z0-071 learning material, which enables you to enjoy the best learning style on your computer. Our 1z0-071 certification guide also use the latest science and technology to meet the new requirements of authoritative research material network learning. Unlike the traditional way of learning, the great benefit of our 1z0-071 learning material is that users can flexibly adjust their learning plans. We hope that our new design of 1z0-071 test questions will make the user's learning more interesting and colorful.

Oracle 1z0-071 certification exam is designed to test the candidate's knowledge and skills in SQL and database management. 1z0-071 exam consists of 73 multiple-choice questions that are to be completed in 100 minutes. 1z0-071 exam covers a wide range of topics, including SQL data retrieval, data manipulation, table creation and management, subqueries, joins, and set operators. 1z0-071 Exam also covers database objects such as views, indexes, and sequences.

Oracle Database SQL Sample Questions (Q65-Q70):

NEW QUESTION # 65

Which two statements are true about *_TABLES views?

- A. You must have ANY TABLE system privileges, or be granted object privileges on the table, to view a table in ALL_TABLES.
- B. USER_TABLES displays all tables owned by the current user.
- C. ALL_TABLES displays all tables owned by the current user.
- D. All users can query DBA_TABLES successfully.
- E. You must have ANY TABLE system privileges, or be granted object privileges on the table, to view a table in DBA_TABLES.
- F. You must have ANY TABLE system privileges, or be granted object privileges on the table, to view a table in USER_TABLES.

Answer: B,C

Explanation:

In Oracle, *_TABLES views provide information about tables.

B. USER_TABLES displays all tables owned by the current user, making this statement true. No additional privileges are required to see your own tables.

D. ALL_TABLES displays all tables that the current user has access to, either through direct ownership or through privileges, making this statement true.

A, C, E, and F are incorrect. Specifically:

A and E are incorrect because you do not need ANY TABLE system privileges to view tables in DBA_TABLES or ALL_TABLES; you need the SELECT_CATALOG_ROLE or equivalent privileges.

C is incorrect because as a user, you do not need additional privileges to see your own tables in USER_TABLES.

F is incorrect because not all users can query DBA_TABLES; this requires specific privileges or roles.

NEW QUESTION # 66

The ORDERS table has a column ORDER_DATE of date type DATE. The default display format for a date is DD-MON-RR. Which two WHERE conditions demonstrate the correct usage of conversion functions?

- A. WHERE order_date > TO_DATE(ADD_MONTHS(SYSDATE,6),'MON DD YYYY');
- B. WHERE order_date IN (TO_DATE('Oct 21 2018','MON DD YYYY'), TO_CHAR('Nov 21 2018','MON DD YYYY'));
- C. WHERE TO_CHAR(order_date,'MON DD YYYY') = 'JAN 20 2019';
- D. WHERE order_date > TO_DATE('JUL 10 2018','MON DD YYYY');
- E. WHERE order_date > TO_CHAR(ADD_MONTHS(SYSDATE, 6),'MON DD YYYY')

Answer: C,D

NEW QUESTION # 67

View the Exhibit and examine the details of PRODUCT_INFORMATION table.

PRODUCT_NAME CATEGORY_ID SUPPLIER_ID

Inkjet C/8/HQ 12 102094

Inkjet C/4 12 102090

LaserPro 600/6/BW 12 102087

LaserPro 1200/8/BW 12 102099

Inkjet B/6 12 102096

Industrial 700/ID 12 102086

Industrial 600/DQ 12 102088

Compact 400/LQ 12 102087

Compact 400/DQ 12 102088

HD 12GB /R 13 102090

HD 10GB /I 13 102071

HD 12GB @7200 /SE 13 102057

HD 18.2GB @10000 /E 13 102078

HD 18.2GB @10000 /I 13 102050

HD 18GB /SE 13 102083
HD 6GB /I 13 102072
HD 8.2GB@5400 13 102093

You have the requirement to display PRODUCT_NAME from the table where the CATEGORY_ID column has values 12 or 13, and the SUPPLIER_ID column has the value 102088. You executed the following SQL statement:

```
SELECT product_name  
FROM product_information
```

WHERE (category_id = 12 AND category_id = 13) AND supplier_id = 102088; Which statement is true regarding the execution of the query?

- A. It would not execute because the same column has been used in both sides of the AND logical operator to form the condition.
- B. It would execute and the output would display the desired result.
- C. It would execute but the output would return no rows.
- D. It would not execute because the entire WHERE clause condition is not enclosed within the parentheses.

Answer: C

NEW QUESTION # 68

Which three queries use valid expressions?

- A. `SELECT product_id, (unit_price * 0.15 / (4.75 + 552.25)) FROM products;`
- B. `SELECT product_id, (expiry_date - delivery_date) * 2 FROM products;`
- C. `SELECT product_id, unit_price, 5 "Discount", unit_price + surcharge - discount FROM products;`
- D. `SELECT product_id, unit_price || 5 "Discount", unit_price + surcharge - discount FROM products;`
- E. `SELECT product_id, expiry_date * 2 FROM products;`
- F. `SELECT product_id, unit_price, unit_price + surcharge FROM products;`

Answer: A,B,F

NEW QUESTION # 69

Examine this statement:

```
SELECT 1 AS id, ' John' AS first name  
FROM DUAL  
UNION  
SELECT 1, ' John' AS name  
FROM DUAL  
ORDER BY 1;
```

What is returned upon execution?

- A. 1 row
- B. an error
- C. 0 rows
- D. 2 rows

Answer: A

Explanation:

The statement provided uses the UNION operator, which combines the results of two or more queries into a single result set. However, UNION also eliminates duplicate rows. Both queries in the union are selecting the same values 1 and ' John', thus the result is one row because duplicates will be removed.

`SELECT 1 AS id, ' John' AS first name FROM DUAL UNION SELECT 1, ' John' AS name FROM DUAL ORDER BY 1;`
Given that both SELECT statements are actually identical in the values they produce, despite the differing column aliases, the UNION will eliminate one of the duplicate rows, resulting in a single row being returned.
