Our PDF version of the AAISM learning braindumps can print on papers and make notes. Then windows software of the AAISM exam questions, which needs to install on windows software. Also, the windows software is intelligent to simulate the real test environment. Then the online engine of the AAISM Study Materials, which is convenient for you because it doesn't need to install on computers. It supports Windows, Mac, Android, iOS and so on. This version just can run on web browser.

## ISACA AAISM Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>AI Risk Management: This section of the exam measures the skills of AI Risk Managers and covers assessing enterprise threats, vulnerabilities, and supply chain risk associated with AI adoption, including risk treatment plans and vendor oversight.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>AI Technologies and Controls: This section of the exam measures the expertise of AI Security Architects and assesses knowledge in designing secure AI architecture and controls. It addresses privacy, ethical, and trust concerns, data management controls, monitoring mechanisms, and security control implementation tailored to AI systems.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>AI Governance and Program Management: This section of the exam measures the abilities of AI Security Governance Professionals and focuses on advising stakeholders in implementing AI security through governance frameworks, policy creation, data lifecycle management, program development, and incident response protocols.</li></ul>

The passing rate of our study material is very high, and it is about 99%. We provide free download and tryout of the AAISM question torrent, and we will update the AAISM exam torrent frequently to guarantee that you can get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our AAISM Latest Questions are compiled by the experienced professionals elaborately. So it will be very convenient for you to buy our product and it will do a lot of good to you.

### ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q208-Q213):

#### NEW QUESTION # 208

An aerospace manufacturing company that prioritizes accuracy and security has decided to use generative AI to enhance operations. Which of the following large language model (LLM) adoption plans BEST aligns with the company's risk appetite?

- A. Purchasing an LLM dataset on the open market
- B. Developing a public LLM to automate critical functions
- **C. Developing a private LLM to automate non-critical functions**
- D. Contracting LLM access from a reputable third-party provider

**Answer: C**

Explanation:

AAISM recommends aligning AI adoption with organizational risk appetite by limiting blast radius, protecting sensitive data, and staging adoption in lower-risk domains first. Building a private LLM for non-critical functions preserves data control, enables tighter governance (access control, logging, evaluation), and confines any model errors away from safety- or mission-critical operations. A public LLM for critical functions (A) is misaligned with a high-assurance posture; buying open-market datasets (B) raises provenance and licensing risk; third-party access (C) can be appropriate but still introduces vendor/visibility limits and data residency concerns that may not meet aerospace security needs.

#### NEW QUESTION # 209

Which of the following is the MOST effective way to mitigate the risk of deepfake attacks?

- A. Limiting employee access to AI tools
- B. Using a general-purpose large language model (LLM) to detect fraud
- **C. Validating the provenance of the data source**
- D. Relying on human judgment for oversight

**Answer: C**

Explanation:

AAISM study content identifies validating the provenance of data sources as the most effective way to counter deepfake risks. Provenance validation ensures that content is authentic, verifiable, and traceable, preventing malicious synthetic media from being trusted as legitimate. Human oversight helps but cannot reliably detect sophisticated fakes. Limiting tool access reduces exposure but does not prevent external attacks. General-purpose LLMs are not optimized for fraud detection. The strongest control is verifying the origin and authenticity of data before acceptance.

#### NEW QUESTION # 210

Who is responsible for implementing recommendations in a final report after an external AI compliance audit?

- A. System architects
- B. Internal auditors
- **C. Model owners**
- D. End users

**Answer: C**

Explanation:

Under AAISM governance, management and control owners are accountable for remediation. For AI systems, the accountable role is the Model Owner (or equivalent business/service owner), who coordinates with architects, engineers, and operations to implement corrective actions and report closure. Internal auditors provide independent assurance and do not implement fixes; end users are not remediation owners.

### NEW QUESTION # 211

A critical AI system shows biased outcomes. What is the BEST course of action?

- A. Retrain the model with a new diverse dataset
- B. Conduct audits of data and model
- C. Activate the kill switch
- **D. Perform root cause analysis to identify mitigation**

**Answer: D**

Explanation:

AAISM emphasizes root cause analysis as the primary step when AI behavior deviates unexpectedly. RCA determines whether issues stem from

- \* data drift
- \* model drift
- \* poisoned data
- \* missing features
- \* logic errors
- \* configuration changes

Retraining (D) may be required later, but only after RCA. Kill switches (A) are last-resort tools. Audits (B) help but are narrower than RCA.

### NEW QUESTION # 212

Which of the following is MOST important for effective AI risk management?

- A. Creation of separate risk management processes for AI-specific risk
- B. Internal stakeholder participation in AI risk management processes
- C. Utilization of best practice AI risk management frameworks
- **D. Risk measurement during an early stage of the AI system life cycle**

**Answer: D**

Explanation:

AAISM positions early and continuous risk assessment as a critical success factor. The guidance states that AI risk should be "identified, analyzed, and measured starting from the design and concept phases, before significant investment and deployment." This ensures that high-impact risks (e.g., bias, privacy violations, safety issues) can be mitigated or designed-out before they become embedded in production systems.

Frameworks (A) are valuable, but their effectiveness depends on when and how they are applied. Stakeholder participation (B) is important but is one component of a broader process. Creating completely separate risk processes for AI (D) may fragment governance and is not required; integration with enterprise risk management is preferred. Thus, the timing of risk measurement-early in the life cycle-is identified as the most important factor for effective AI risk management.
