Our company emphasizes the interaction with customers on our MTCNA Study Guide. We not only attach great importance to the quality of MikroTik Certified Network Associate Exam exam, but also take the construction of a better after-sale service on our MTCNA learning materials into account.

MikroTik Certified Network Associate Exam Sample Questions (Q92-Q97):

NEW QUESTION # 92

You would like to allow multiple logins with one user name on a Hot-Spot server. How should this be configured?

- A. It's not possible
- B. Set "Shared Users" option at /ip Hot-Spot
- **C. Set "Shared Users" option at /ip Hot-Spot user profile**
- D. Set "only-one=no" at /ip Hot-Spot

Answer: C

NEW QUESTION # 93

Which is a default baud-rate of currently manufactured RouterBOARDs?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

The default serial console baud rate for most modern MikroTik RouterBOARD devices is 115200 bps. This is important when accessing the router via serial console (e.g., through RS-232 or USB-to-serial adapters).

Let's evaluate:

- * A. 9600 ##Too slow; used in legacy systems
- * B. #115200 # Correct default for MikroTik boards
- * C. 38400 ##Incorrect
- * D. 11520 ##Typo; not a standard rate

MTCNA Hardware Module - Serial Access:

"Default baud-rate is 115200. Use this setting when connecting via serial cable." Rene Meneses Study Guide - RouterBOARD Console Access:

"Use 115200 baud to access RouterBOARD via serial port."

Terry Combs Notes - Serial Console Tips:

"Almost all modern RouterBOARDs use 115200 as default serial speed."

NEW QUESTION # 94

Domain name system (DNS) requests can use protocol/port:

- **A. UDP**
- **B. TCP port 53**

Answer: A,B

NEW QUESTION # 95

The correct order for PPPOE discovery stage is

- A. Initialization, Session confirmation, Request and Offer
- **B. Initialization, Offer, Request and Session confirmation**
- C. Request, Initialization, Session confirmation and Offer
- D. Request, Offer, Initialization and Session confirmation

Answer: B

NEW QUESTION # 96

[VLAN Management - VTP and Cisco Switching] Which one of the following is true regarding VLANs?

- A. VLANs only work if you have a complete Cisco switched internetwork. No off-brand switches are allowed.
- B. You should not have more than 10 switches in the same VTP domain.
- C. Two VLANs are configured by default on all Cisco switches.
- D. VTP is used to send VLAN information to switches in a configured VTP domain.

Answer: D

Explanation:

VTP (VLAN Trunking Protocol) is a Cisco proprietary protocol used to manage and propagate VLAN information throughout a switch fabric. It helps maintain consistency across switches by distributing VLAN configurations from a VTP server to client switches in the same domain.

Cisco Switching Guide - VTP Concepts:

"VTP advertises VLAN definitions on a LAN to ensure consistency. It reduces misconfigurations by centralizing VLAN management." Rene Meneses MTCNA Study Guide - VLAN and VTP Notes:

"VTP sends VLAN updates across switches in the same VTP domain. Switches must be compatible and share the domain name." Breakdown:

- * A: Only VLAN 1 exists by default
- * B: VLANs are not Cisco-exclusive
- * C: There is no limit of 10 switches in a VTP domain
- * D:#Correct

NEW QUESTION #97

By devoting in this area so many years, we are omnipotent to solve the problems about the MTCNA actual exam with stalwart confidence. If you fail the MTCNA exam by accident even if getting our MTCNA practice materials, you can provide your report card and get full refund as well as choose other version of MTCNA practice materials by your decision. We provide services 24/7 with patient and enthusiastic staff. All moves are responsible due to your benefits.
