You may urgently need to attend Associate-Cloud-Engineer certificate exam and get the certificate to prove you are qualified for the job in some area. If you buy our Associate-Cloud-Engineer study materials you will pass the test almost without any problems. Our Associate-Cloud-Engineer study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. To further understand the merits and features of our Associate-Cloud-Engineer Practice Engine you could look at the introduction of our product in detail.

Google Associate-Cloud-Engineer certification is an essential certification for professionals who want to demonstrate their skills and knowledge in cloud computing. It validates your ability to manage and deploy GCP solutions and is recognized globally by employers. With cloud computing becoming increasingly important in today's business world, earning this certification can help you advance your career and increase your earning potential.

The Google Associate-Cloud-Engineer Exam itself consists of multiple-choice questions that are designed to test the candidate's knowledge and understanding of the Google Cloud platform. Candidates will have two hours to complete the exam, and they must achieve a passing score of 70% or higher to earn the certification. Upon passing the exam, candidates will receive a digital badge that they can use to showcase their credentials to potential employers.

Associate-Cloud-Engineer Exam Resources & Associate-Cloud-Engineer Best Questions & Associate-Cloud-Engineer Exam Dumps

Our company has been putting emphasis on the development and improvement of Associate-Cloud-Engineer test prep over ten year without archaic content at all. So we are bravely breaking the stereotype of similar content materials of the exam, but add what the exam truly tests into our Associate-Cloud-Engineer Exam Guide. So we have adamant attitude to offer help rather than perfunctory attitude. We esteem your variant choices so all these versions of Associate-Cloud-Engineer study materials are made for your individual preference and inclination.

Google Associate-Cloud-Engineer (Google Associate Cloud Engineer) certification exam is designed to test individuals' knowledge and skills in managing and deploying applications, infrastructure, and data solutions on Google Cloud Platform. Google Associate Cloud Engineer Exam certification is ideal for individuals who are interested in working with cloud-based technologies and want to demonstrate their proficiency in Google Cloud Platform.

Google Associate Cloud Engineer Exam Sample Questions (Q35-Q40):

NEW QUESTION # 35

You have a Kubernetes cluster with 1 node-pool. The cluster receives a lot of traffic and needs to grow. You decide to add a node. What should you do?

- A. Use "kubectl container clusters resize" with the desired number of nodes.
- B. Edit the managed instance group of the cluster and enable autoscaling.
- C. Edit the managed instance group of the cluster and increase the number of VMs by 1.
- D. Use "gcloud container clusters resize" with the desired number of nodes.

Answer: D

Explanation:

A is correct because this resizes the cluster to the desired number of nodes.

B is not correct because you need to use gcloud, not kubectl.

C is not correct because you should not manually manage the MIG behind a cluster.

D is not correct because you should not manually manage the MIG behind a cluster.

NEW QUESTION # 36

You are about to deploy a new Enterprise Resource Planning (ERP) system on Google Cloud.

The application holds the full database in-memory for fast data access, and you need to configure the most appropriate resources on Google Cloud for this application. What should you do?

- A. Provision Compute Engine instances with local SSDs attached.
- B. Provision Compute Engine instances with M1 machine type.
- C. Provision preemptible Compute Engine instances.
- D. Provision Compute Engine instances with GPUs attached.

Answer: B

Explanation:

M1 machine type is the one of two Memory-Optimized machine types in GCP.

NEW QUESTION # 37

You've run a command to start up 2 new instances. However, you do not see the instances in the console. What command(s) would help you to identify the cause of the problem?

- A. gcloud auth login
- B. gcloud info
- C. gcloud config list
- D. gcloud debug

Answer: B,C

NEW QUESTION # 38

You need to create an autoscaling managed instance group for an HTTPS web application. You want to make sure that unhealthy VMs are recreated. What should you do?

- A. In the Instance Template, add a startup script that sends a heartbeat to the metadata server.
- **B. In the Instance Template, add the label 'health-check'.**
- C. Create a health check on port 443 and use that when creating the Managed Instance Group.
- D. Select Multi-Zone instead of Single-Zone when creating the Managed Instance Group.

Answer: B

Explanation:

Explanation/Reference: <https://cloud.google.com/compute/docs/instance-groups/creating-groups-of-managed-instances>

NEW QUESTION # 39

You are managing several Google Cloud Platform (GCP) projects and need access to all logs for the past 60 days. You want to be able to explore and quickly analyze the log contents. You want to follow Google- recommended practices to obtain the combined logs for all projects. What should you do?

- A. Create a Stackdriver Logging Export with a Sink destination to Cloud Storage. Create a lifecycle rule to delete objects after 60 days.
- B. Configure a Cloud Scheduler job to read from Stackdriver and store the logs in BigQuery. Configure the table expiration to 60 days.
- **C. Create a Stackdriver Logging Export with a Sink destination to a BigQuery dataset. Configure the table expiration to 60 days.**
- D. Navigate to Stackdriver Logging and select resource.labels.project_id="*"

Answer: C

Explanation:
