## New AWS-Developer Exam Format - Valid AWS-Developer Test Duration

In informative level, we should be more efficient. In order to take the initiative, we need to have a strong ability to support the job search. And how to get the test AWS-Developer certification in a short time, which determines enough AWS-Developer qualification certificates to test our learning ability and application level. Our AWS-Developer Exam Questions are specially designed to meet this demand for our worthy customers. As long as you study with our AWS-Developer learning guide, you will pass the exam and get the certification for sure.

## Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q179-Q184):

### NEW QUESTION # 179

A company uses Amazon DynamoDB for managing and tracking orders. The DynamoDB table is partitioned based on the order date. The company receives a huge increase in orders during a sales event, causing DynamoDB writes to throttle, and the consumed throughput is far below the provisioned throughput.

According to AWS best practices, how can this issue be resolved with MINIMAL costs?

- **A. Add a random number suffix to the partition key values.**
- B. Create a new DynamoDB table for every order date.
- C. Add a global secondary index to the DynamoDB table.
- D. Increase the read and write capacity units of the DynamoDB table.

**Answer: A**

Explanation:

<https://docs.aws.amazon.com/amazondynamodb/latest/developerguide/bp-partition-key-uniform-load.html>

### NEW QUESTION # 180

A developer is setting up Amazon API Gateway for their company's products. The API will be used by registered developers to query and update their environments. The company wants to limit the amount of requests end users can send for both cost and security reasons. Management wants to offer registered developers the option of buying larger packages that allow for more requests.

How can the developer accomplish this with the LEAST amount of overhead management?

- A. Enable throttling for the API Gateway stage. Set a value for both the rate and burst capacity. If a registered user chooses a larger package, create a stage for them, adjust the values, and share the new URL with them.
- **B. Set up a default usage plan, specify values for the rate and burst capacity, and associate it with a stage. If a registered user chooses a larger package, create a custom plan with the appropriate values and associate the plan with the user.**
- C. Enable Amazon CloudWatch metrics for the API Gateway stage. Set up CloudWatch alarms based off the Count metric and the ApiName, Method, Resource, and Stage dimensions to alerts when request rates pass the threshold. Set the alarm action to Deny. If a registered user chooses a larger package, create a user-specific alarm and adjust the values.
- D. Set up Amazon CloudWatch API logging in API Gateway. Create a filter based on the user and requestTime fields and create an alarm on this filter. Write an AWS Lambda function to analyze the values and requester information, and respond accordingly. Set up the function as the target for the alarm. If a registered user chooses a larger package, update the Lambda code with the values.

**Answer: B**

### NEW QUESTION # 181

A developer has written an Amazon Kinesis Data Streams application. As usage grows and traffic over time, the application is regularly receiving `ProvisionedThroughputExceededException` error messages.

Which steps should the Developer take to resolve the error? (Select Two.)

- A. Implement exponential backoff on the `GetRecords` call and the `PutRecords` call.
- **B. Increase the delay between the `GetRecords` call and the `PutRecords` call.**
- C. Use Auto scaling to scale the stream for better performance.
- **D. Specify a shard iterator using the `shardIterator` parameter.**
- E. Increase the number of shards in the data stream.

**Answer: B,D**

Explanation:

<https://docs.aws.amazon.com/streams/latest/dev/troubleshooting-consumers.html>

### NEW QUESTION # 182

An organization is using Amazon CloudFront to ensure that its users experience low-latency access to its web application. The organization has identified a need to encrypt all traffic between users and CloudFront, and all traffic between CloudFront and the web application.

How can these requirements be met? (Choose two.)

- A. Set the Origin Protocol Policy to "HTTPS Only".
- B. Set the Origin's HTTP Port to 443.
- C. Use AWS KMS to encrypt traffic between CloudFront and the web application.
- D. Enable the CloudFront option Restrict Viewer Access.
- E. Set the Viewer Protocol Policy to "HTTPS Only" or "Redirect HTTP to HTTPS".

**Answer: A,E**

Explanation:

Explanation

<https://docs.aws.amazon.com/AmazonCloudFront/latest/DeveloperGuide/using-https-cloudfront-to-custom-origi>

### NEW QUESTION # 183

When uploading an object, what request header can be explicitly specified in a request to Amazon S3 to encrypt object data when saved on the server side?

- A. x-amz-server-side-encryption
- B. x-amz-security-token
- C. Content-MD5
- D. x-amz-storage-class

**Answer: A**

Explanation:

Explanation
