君はまだSalesforceのPlat-Admn-301認証試験を通じての大きい難度が悩んでいますか？ 君はまだSalesforce Plat-Admn-301認証試験に合格するために寝食を忘れて頑張って復習しますか？ 早くSalesforce Plat-Admn-301認証試験を通りたいですか？ JPNTestを選択しましょう！ JPNTestはきみのIT夢に向かって力になりますよ。JPNTestは多様なIT認証試験を受ける方を正確な資料を提供者でございます。弊社の無料なサンプルを遠慮なくダウンロードしてください。

Salesforce Plat-Admn-301 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Auditing and Monitoring: This section of the exam measures skills of a Salesforce Support Specialist and covers the tools used to monitor system behavior and review user activity. It includes understanding debug logs, setup audit trail, and methods for ensuring sensitive data is handled correctly in both production and sandbox environments. It also explains how to review and troubleshoot security settings, including recognizing pending updates that might affect system access.
トピック 2	• Environment Management and Deployment: This section of the exam measures skills of Salesforce Administrator and covers moving metadata between environments using tools such as sandboxes, change sets, and managed or unmanaged AppExchange packages. It explains the capabilities and best practices related to deploying changes through change sets to ensure smooth and controlled migrations.

トピック 3	• Security and Access: This section of the exam measures the skills of Salesforce Administrator and covers how record-level access, field access, and sharing models impact data visibility across the system. It focuses on understanding controlled-by-parent relationships, territory management, role hierarchies, and access to reports, dashboards, and email folders. It also includes comparing custom profiles, permission sets, and delegated administration, along with evaluating different authentication methods. The section also addresses the structure of business models such as person accounts, standard accounts, contacts, and contact-to-multiple-account relationships.
トピック 4	• Data and Analytics Management: This section of the exam measures skills of Salesforce Data Analyst and covers data quality assessment, data enrichment, and duplicate management. It explains how to choose appropriate reporting and analytics tools for advanced requirements, including custom report types, snapshots, formulas, joined reports, and dashboard configurations. It also covers methods for connecting external data sources using big objects, external objects, data warehouses, data lakes, and Salesforce Connect. Finally, it describes the suitable tools and methods for importing data, including Data Loader, Data Import Wizard, and external IDs.
トピック 5	• Process Automation: This section of the exam measures skills of Salesforce Consultant and covers choosing the right automation tools to solve complex business problems. It focuses on understanding the capabilities and limitations of declarative tools, identifying the right troubleshooting methods, and applying automation correctly within Salesforce's order of execution. This section emphasizes designing efficient, scalable automation using workflow tools, flows, and other declarative features.

Plat-Admn-301日本語版問題解説、Plat-Admn-301復習対策書

当社Salesforceには多くの専門家や教授がいます。当社のすべてのPlat-Admn-301研究トレントは、JPNTTestさまざまな分野のこれらの優秀な専門家および教授によって設計されています。Plat-Admn-301テストトレントが他の学習教材よりも高い品質を持っていることを確認できます。私たちのデザインの目的は、学習を改善し、最短時間でPlat-Admn-301認定を取得できるようにすることです。認定資格を取得したい場合は、Salesforce Certified Platform Administrator IIガイド急流が最適です。

Salesforce Certified Platform Administrator II 認定 Plat-Admn-301 試験問題 (Q217-Q222):

質問 # 217

Cloud Kicks users need to link multiple Case records to multiple Outcome records stored in a custom object.

Any user that can view the Case record must be able to create a link. The administrator creates a Case Outcome custom object.

What is the recommended option to use when adding a field to Case Outcome?

- A. Master-detail relationship with Read-Only sharing setting.
- **B. Lookup relationship with Read/Write sharing setting**
- C. Mater-detail relationship with Read/Write sharing setting
- D. Lookup relationship with Ready-Only sharing setting.

正解: B

解説:

A lookup relationship with Read/Write sharing setting is the recommended option to use when adding a field to Case Outcome custom object. A lookup relationship is a type of relationship that links two objects together and allows users to associate one record with another. A lookup relationship does not affect the security or deletion of either record and can be optional or required. In this case, you can create a lookup relationship field on Case Outcome object that references Case object and allows users to link multiple Case records to multiple Case Outcome records. You can also set the sharing setting for the lookup field to Read/Write, which means that users who have access to the parent record can also access and edit the child record. References:

質問 # 218

Cloud Kicks has a very large knowledge base in Salesforce, Service reps are having a hard time finding the most relevant articles because there are too many search results.

What should the administrator do to help service reps quickly narrow down the number of articles?

- A. Activate and configure Einstein Search.
- **B. Implement and configure Data Categories.**
- C. Delete and remove old Knowledge articles.
- D. Update Knowledge to auto-search the case's subject.

正解: B

解説:

Data Categories are a way to organize and classify knowledge articles into a hierarchical structure based on topics or criteria. Data Categories can help service reps quickly narrow down the number of articles by filtering or browsing by category. Data Categories can also be used to control the visibility and access of articles for different users or roles.

質問 # 219

An administrator created a new custom object. When trying to upload new records to the custom object using Data Loader, they are unable to see the new custom object in the list of available objects.

What should the administrator do to resolve the issue?

- A. Assign a permission set to give them access to the new object.
- B. Check the Field-Level Security of the new custom object's Name field.
- **C. Confirm the object is marked as deployed and not in development.**
- D. Ensure Allow Sharing is checked on the custom object.

正解: C

解説:

Confirm the object is marked as deployed and not in development is what the administrator should do to resolve the issue. A custom object can be marked as deployed or in development depending on its readiness for use. A custom object that is marked as in development is not visible to users or available for data import or export. A custom object that is marked as deployed is visible to users and available for data import or export. Therefore, the administrator should make sure that the new custom object is marked as deployed before using Data Loader to upload records to it.

質問 # 220

Cloud Kicks (CK) has an email parsing tool. CK wants to ensure that when certain fields are updated, the Case Owner is notified by email.

What should the administrator use to email the Case Owner?

- A. Outbound Message
- B. Before Save Flow
- C. Email-to-Case
- **D. After Save Flow**

正解: D

解説:

An after save flow is a type of flow that runs in the background after a record is saved and performs actions based on the record data or changes. An after save flow does not require user input or interaction and can be triggered by a record-triggered flow element or by an Apex trigger. In this case, you can create an after save flow that runs when a case record is updated and delivers status update email to customers based on certain criteria or conditions. References: https://help.salesforce.com/s/articleView?id=sf.flow_trigger_types.htm&type=5

https://help.salesforce.com/s/articleView?id=sf.flow_concepts_trigger.htm&type=5

質問 # 221

How should an administrator accomplish this?

- A. Create a roll-up summary field on Room.
- B. Write record-triggered flows whenever Room records are related, modified, or deleted.
- **C. Make record-triggered flows whenever Equipment records are created, modified or deleted.**
- D. Configure a roll-up summary field on Equipment.

正解: C

解説:

A roll-up summary field is a type of field that calculates values from related records and displays them on the parent record. A roll-up summary field can be used to count, sum, min, or max values from child records. You can create a roll-up summary field on an object that has a master-detail relationship with another object. In this case, you can create a roll-up summary field on Room that counts the number of Equipment records related to it. References: https://help.salesforce.com/s/articleView?id=sf.fields_about_roll_up_summary_fields.htm&type=5 https://help.salesforce.com/s/articleView?id=sf.fields_defining_field_types.htm&type=5
