## Fortinet NSE8\_812 Dumps Get Success Fortinet NSE8\_812 Minimal Effort

As a reliable product website, we have the responsibility to protect our customers' personal information leakage and your payment security. So you can be rest assured the purchase of our NSE8\_812 exam software. Besides, we have the largest IT exam repository, if you are interested in NSE8\_812 Exam or any other exam dumps, you can search on our ExamPrepAway or chat with

our online support any time you are convenient. Wish you success in NSE8\_812 exam

Fortinet NSE8\_812 Certification Exam is a challenging exam that requires a high level of knowledge and expertise in network security. Candidates must be well-prepared for the exam in order to pass it on the first attempt. They can prepare for the exam by attending training courses, reading study materials, and practicing with sample questions and simulations.

## Fortinet NSE 8 - Written Exam (NSE8\_812) Sample Questions (Q10-Q15):

### NEW QUESTION # 10

Refer to the exhibit.

A customer reports that they are not able to reach subnet 10.10.10.0/24 from their FortiGate device. Based on the exhibit, what should you do to correct the situation?

- A. Enable iBGP multipath
- B. Enable recursive resolution for BGP routes
- C. Enable next-hop-self feature
- D. Enable additional-path feature

**Answer: C**

### NEW QUESTION # 11

Refer to the CLI configuration of an SSL inspection profile from a FortiGate device configured to protect a web server:

Based on the information shown, what is the expected behavior when an HTTP/2 request comes in?

- A. FortiGate will strip the ALPN header and forward the traffic.
- B. FortiGate will rewrite the ALPN header to request HTTP/1.
- C. FortiGate will reject all HTTP/2 ALPN headers.
- D. FortiGate will forward the traffic without modifying the ALPN header.

**Answer: C**

Explanation:

The supported-alpn parameter is set to http1.1 in the SSL inspection profile. This means that the FortiGate will only accept HTTP/1.1 traffic. Any HTTP/2 traffic will be rejected.

The following is the relevant documentation from Fortinet:

The supported-alpn parameter specifies the list of ALPN protocols that the FortiGate will accept. If the client requests a protocol that is not in this list, the FortiGate will reject the connection.

The default value for the supported-alpn parameter is all. This means that the FortiGate will accept any ALPN protocol that the client requests.

To reject all HTTP/2 traffic, set the supported-alpn parameter to http1.1.

### NEW QUESTION # 12

A customer is operating a FortiWeb cluster in a high volume active-active HA group consisting of eight FortiWeb appliances. One of the secondary members is handling traffic for one specific VIP.

What will happen with the traffic if that secondary FortiWeb appliance fails?

- A. Traffic will be redirected to the next appliance in the same traffic group.
- B. Traffic will be redistributed by the primary appliance to the remaining secondary appliances that are configured to handle traffic for that specific VIP.
- C. Traffic will be redistributed by the primary appliance to the remaining secondary appliances.
- D. Traffic will be redirected to the secondary member with the least number of sessions.

**Answer: A**

### NEW QUESTION # 13

Refer to the exhibit showing the history logs from a FortiMail device.

Which FortiMail email security feature can an administrator enable to treat these emails as spam?

- A. Soft fail SPF validation in an antispam profile
- **B. Impersonation analysis in an antispam profile**
- C. DKIM validation in a session profile
- D. Sender domain validation in a session profile

**Answer: B**

Explanation:

Impersonation analysis is a feature that detects emails that attempt to impersonate a trusted sender, such as a company executive or a well-known brand, by using spoofed or look-alike email addresses. This feature can help prevent phishing and business email compromise (BEC) attacks. Impersonation analysis can be enabled in an antispam profile and applied to a firewall policy.

#### NEW QUESTION # 14

Refer to the exhibit showing a firewall policy configuration.

To prevent unauthorized access of their cloud assets, an administrator wants to enforce authentication on firewall policy ID 1. What change does the administrator need to make?

- A. Option C
- B. Option B
- **C. Option A**
- D. Option D

**Answer: C**
