The best news is that during the whole year after purchasing, you will get the latest version of our H12-841_V1.5 exam prep study materials for free, since as soon as we have compiled a new version of the study materials, our company will send the latest one of our study materials to your email immediately. The experts in our company are always keeping a close eye on even the slightest change in the field. Therefore, we can assure that you will miss nothing needed for the H12-841_V1.5 Exam. What's more, the latest version of our study materials will be a good way for you to broaden your horizons as well as improve your skills.

Today, the prevailing belief is that knowledge is stepping-stone to success. By discarding outmoded beliefs, our H12-841_V1.5 exam materials are update with the requirements of the authentic exam. To embrace your expectations and improve your value during your review, you can take joy and challenge the H12-841_V1.5 Exam may bring you by the help of our H12-841_V1.5 guide braindumps. You will be surprised by the high-effective of our H12-841_V1.5 study guide!

Huawei H12-841_V1.5 Exam Questions | Reduce Your Fear in Final Exam

With our H12-841_V1.5 practice materials, you don't need to spend a lot of time and effort on reviewing and preparing. For

everyone, time is precious. Office workers and mothers are very busy at work and home; students may have studies or other things. Using H12-841_V1.5 guide torrent, you only need to spend a small amount of time to master the core key knowledge to pass the H12-841_V1.5 Exam and get a H12-841_V1.5 certificate. It is proved that if you spend 20 to 30 hours to study our H12-841_V1.5 exam questions, it is easy for you to pass the H12-841_V1.5 exam.

Huawei HCIP-Datacom-Campus Network Planning and Deployment V1.5 Sample Questions (Q85-Q90):

NEW QUESTION # 85

(Refer to the following routing entries queried using a command on the VTEP. Which of the following statements about these routes are true?) Network(EthTagId/IpAddrLen/OriginalIp) NextHop

```
*>i 0:32:1.1.1.0 1.1.1.0
```

Route Distinguisher: 2:5

```
Network(EthTagId/IpAddrLen/OriginalIp) NextHop
```

```
*>i 0:32:1.1.1.0 1.1.1.0
```

Route Distinguisher: 2:7

```
Network(EthTagId/IpAddrLen/OriginalIp) NextHop
```

```
*>i 0:32:1.1.1.0 1.1.1.0
```

- A. These routes are Type 5 routes used to advertise IP prefixes (network segments).
- B. These routes are Type 1 routes used for Ethernet Auto-Discovery (ESI multihoming).
- **C. These routes are Type 3 routes. If the VTEP IP address carried in these routes is reachable at Layer 3, a VXLAN tunnel to the peer end is established.**
- D. These routes are Type 2 routes used to advertise MAC/IP (host) information.

Answer: C

Explanation:

The displayed entries match the format of EVPN routes that carry VTEP reachability information rather than host MAC/IP bindings or IP prefixes. The key clue is the field naming style shown as Network(EthTagId/IpAddrLen/OriginalIp) along with values like 0:32:1.1.1.0, which indicates an IP address with a /32 length carried as the "OriginalIp". In Huawei VXLAN BGP EVPN implementations described in HCIP Datacom Campus Network materials, this type of information corresponds to EVPN Route Type 3 (Inclusive Multicast Ethernet Tag Route).

Type 3 routes are used by VTEPs to signal membership information for a broadcast domain and to support BUM (Broadcast, Unknown unicast, Multicast) forwarding behavior in the VXLAN fabric. Practically, they also provide the remote VTEP IP information needed so that, once the underlay can reach that VTEP IP address at Layer 3 (for example via IGP/BGP underlay routes), the local device can establish VXLAN encapsulation forwarding to that peer.

By contrast, Type 2 routes would display MAC address information (and possibly a host /32 IP together with the MAC), and Type 5 routes would show IP prefixes like /24 or /30 used for inter-subnet routing. Type 1 routes are related to Ethernet segments for multihoming (ESI), which is not what this output shows. Therefore, only statement A is true.

NEW QUESTION # 86

In Huawei's WAN solution, for "large files (e.g., over 10GB) transmitted across regions", which of the following technologies can "achieve file segmentation and resume interrupted transmission, thus improving transmission reliability"?

- A. Reduce file transfer rate to decrease the probability of interruption.
- **B. File-segmented transmission technology (splitting files into small chunks for independent transmission) + resume interrupted download**
- C. Transmit only when bandwidth is sufficient, and pause when bandwidth is insufficient.
- D. Transfer the entire large file directly without splitting it into chunks; if the transfer is interrupted, it needs to be retransmitted.

Answer: B

NEW QUESTION # 87

(An MSP administrator creates a tenant account. Which of the following logs records the operation?)

- A. System Log
- B. Device Channel Log

- C. Operation Log
- D. Security Log

Answer: C

Explanation:

Comprehensive and Detailed 200 to 250 words of Explanation From HCIP Datacom Campus Network documents knowledge without any URL or Links:

In Huawei iMaster NCE-Campus and CloudCampus management systems, different log types are designed to record different categories of events to support auditing, troubleshooting, and security analysis. When an MSP administrator creates a tenant account, this action is considered a management operation performed through the system's management interface.

Such administrative actions are recorded in the Operation Log. Operation logs document user-initiated configuration and management activities, including tenant creation, modification, deletion, policy changes, and administrative actions performed by operators or administrators. These logs are essential for operation auditing and responsibility tracing in multi-tenant environments.

System logs mainly record internal system events, such as service startup, module status changes, or system exceptions, and do not track administrator operations. Security logs focus on security-related events, such as login failures, abnormal access attempts, or permission violations, rather than routine administrative operations. Device channel logs record communication events between devices and controllers, such as device registration or channel status changes, and are unrelated to tenant management actions.

According to HCIP Datacom Campus Network and CloudCampus O&M documentation, tenant account creation performed by an MSP administrator is clearly categorized as an operation behavior, and therefore it is recorded in the Operation Log.

NEW QUESTION # 88

In the OSPF protocol for wide area networks, which of the following is the core information contained in Type 2 LSA (Network LSA)?

- A. Prefixes and metrics for external routes within the NSSA area
- B. Prefix and next hop of external routes to the AS
- C. Prefix and metric of inter-area summary route
- D. The DR router ID that generated this LSA and the IDs of all routers in the network.

Answer: D

NEW QUESTION # 89

After the failure of the OSPF protocol in wide area networks, what is the core function of Type 6 LSA (Group Membership LSA)?

- A. Used for OSPF multicast routing to transmit multicast membership information.
- B. Used to describe router information within the network, propagated within the area.
- C. Used to describe external routes to the AS, propagating throughout the AS.
- D. Used to describe summarized routes between areas, reducing routing table entries.

Answer: A

NEW QUESTION # 90

.....

These Huawei H12-841_V1.5 questions can be customized by the user according to their needs. This customization feature so that customers can adjust the time as they want. They can change the settings of the time and questions as per need while giving the Huawei H12-841_V1.5 tests. These Huawei H12-841_V1.5 exam questions train candidates to maintain discipline so that they can solve the real Huawei H12-841_V1.5 questions on time while giving their final H12-841_V1.5 exam.
