#### NEW QUESTION # 24

Where is metadata stored in a Mule project

- A. Global Element
- B. Config.yaml file
- C. POM.xml file
- D. application-types.xml

**Answer: D**

Explanation:

Metadata is stored in application-types.xml file located under src/main/resources.

Mule 4 applications contain an application-types.xml file, which is where metadata around your data types is stored. For example, if you create a new CSV type, that metadata will be added to this file. This new file is easy to share, commit, and merge when conflicts arise, which enables you to do more metadata-driven development.

#### NEW QUESTION # 25

What is the correct syntax for a Logger component to output a message with the contents of a JSON Object payload?

- A. #['The payload is: " + payload]
- B. The payload is: #[payload]
- C. The payload is: \$(payload)
- D. #['The payload is: " ++ payload]

**Answer: D**

Explanation:

Option 3 is the only correct answer as it concatenates payload with String.

Below option won't work.

#['The payload is " ++ payload]

Concatenation function expects both arguments to be string. As the question says payload is json object, this will throw error while running it. You can try this in Anypoint Studio and you will get the same result which I mentioned.
