## Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL.</li><li>TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Security Operations: This final section measures skills of a Security Operations Analyst and covers key characteristics and practices of threat hunting and incident response processes. It explains functions and benefits of security information and event management (SIEM) platforms, security orchestration, automation, and response (SOAR) tools, and attack surface management (ASM) platforms. It also highlights the functionalities of Cortex solutions, including XSOAR, Xpanse, and XSIAM, and describes services offered by Palo Alto Networks' Unit 42.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.</li></ul>

## Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q35-Q40):

### NEW QUESTION # 35

What are two capabilities of identity threat detection and response (ITDR)? (Choose two.)

- A. Securing individual devices
- B. Analyzing access management logs
- C. Matching risks to signatures
- D. Scanning for excessive logins

**Answer: B,D**

Explanation:

Scanning for excessive logins - ITDR identifies suspicious patterns such as unusual or excessive login attempts, which may indicate credential abuse.

Analyzing access management logs - ITDR tools analyze identity-related logs, including authentication and authorization events, to

detect threats tied to user behavior and access anomalies.

Device security and signature matching are not core functions of ITDR; they fall under endpoint protection and traditional threat detection respectively.

#### NEW QUESTION # 36

Which Palo Alto subscription service identifies unknown malware, zero-day exploits, and advanced persistent threats (APTs) through static and dynamic analysis in a scalable, virtual environment?

- A. WildFire
- B. DNS Security
- C. URL Filtering
- D. Threat Prevention

**Answer: A**

Explanation:

"The WildFire cloud-based malware analysis environment is a cyber threat prevention service that identifies unknown malware, zero-day exploits, and advanced persistent threats (APTs) through static and dynamic analysis in a scalable, virtual environment. WildFire automatically disseminates updated protections in near- real time to immediately prevent threats from spreading; this occurs without manual intervention"

#### NEW QUESTION # 37

Which SOAR feature coordinates across technologies, security teams, and external users for centralized data visibility and action?

- A. Case management
- B. Playbooks
- C. Ticketing system
- D. Integrations

**Answer: B**

Explanation:

Playbooks are collections of workflows that automate and orchestrate tasks, alerts, and responses to incidents.

Playbooks are triggered by rules or incidents and can coordinate across technologies, security teams, and external users for centralized data visibility and action. Playbooks can help improve the efficiency and effectiveness of security operations by reducing manual work, streamlining processes, and enhancing collaboration. #### NEW QUESTION # 38

Which of the following is an AWS serverless service?

- A. Kappa
- B. Lambda
- C. Delta
- D. Beta

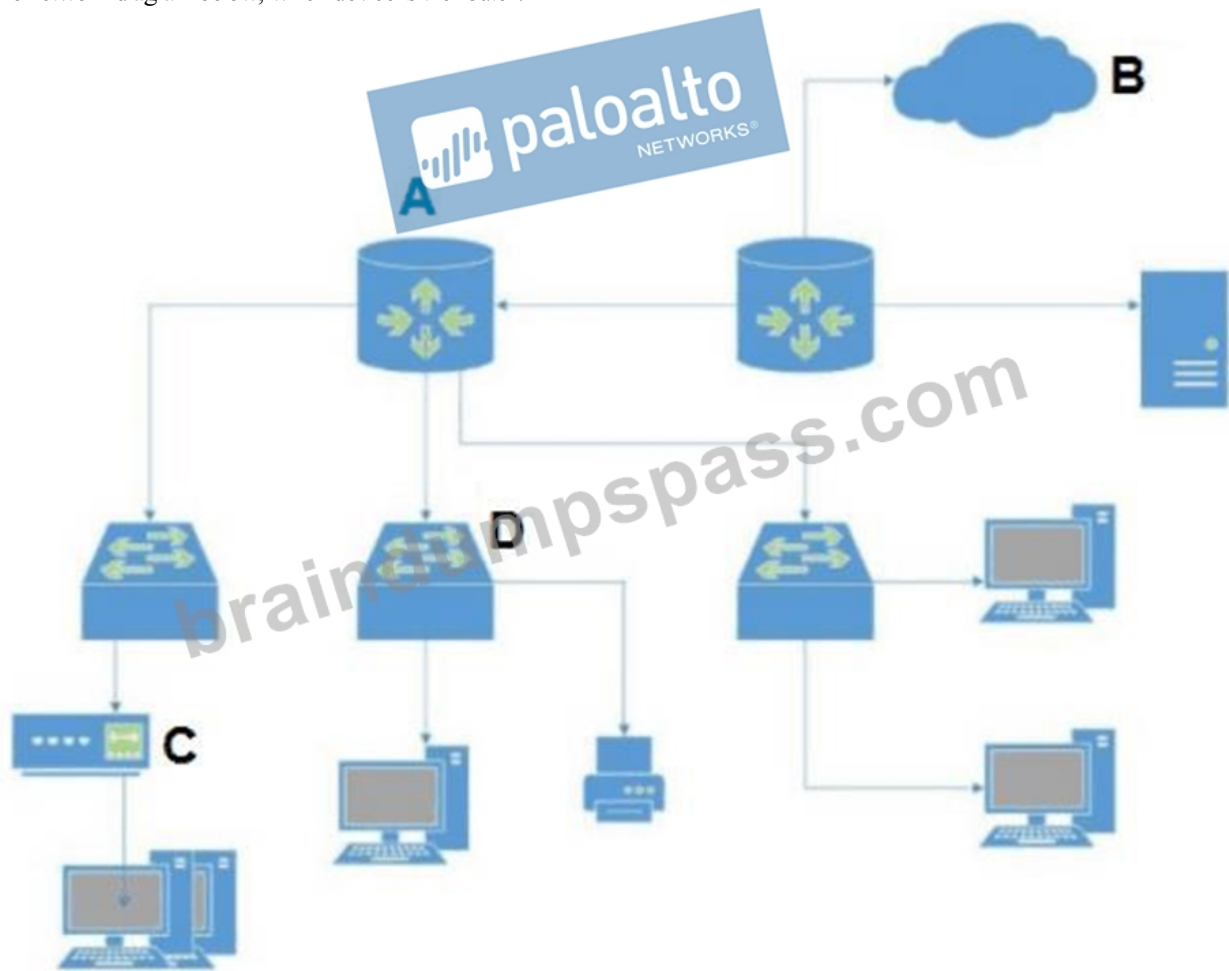

**Answer: B**

Explanation:

Examples of serverless environments include Amazon Lambda and Azure Functions. Many PaaS offerings, such as Pivotal Cloud Foundry, also are effectively serverless even if they have not historically been marketed as such. Although serverless may appear to lack the container-specific, cloud native attribute, containers are extensively used in the underlying implementations, even if those implementations are not exposed to end users directly.

#### NEW QUESTION # 39

In the network diagram below, which device is the router?

- A. Select A
- **B. Select B**
- C. Select D
- D. Select C

**Answer: B**

Explanation:

In the given network diagram, device D is depicted as a cloud symbol, which is commonly used to represent the internet in network diagrams. The router is typically connected to the internet and acts as a gateway for internal network devices to access external networks. Therefore, device D is the router in this context.
