## Reliable NCP-US-6.5 Test Simulator 100% Pass | Professional NCP-US-6.5: Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 100% Pass

With the society of development, companies have high demands for IT senior positions, how do applicants stand out over so many competes? Nutanix NCP-US-6.5 latest exam cram make you stand out. Our exam cram materials help thousands of candidates

pass exam and get certifications. Many companies cooperate with us long-term to provide valid NCP-US-6.5 Latest Exam Cram for their engineers and managers since they find our materials are the best provider.

## Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Analyze and Monitor Nutanix Unified Storage</li><li>• Describe the use of Data Lens for data security</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Given a scenario, configure shares, buckets, and</li><li>• or Volume Groups</li><li>• Troubleshoot a failed upgrade for Files</li><li>• Objects</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Deploy and Upgrade Nutanix Unified Storage</li><li>• Perform upgrades</li><li>• maintenance for Files</li><li>• Objects implementations</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Configure and Utilize Nutanix Unified Storage</li><li>• Identify the steps to deploy Nutanix Objects</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Troubleshoot issues related to Nutanix Files</li><li>• Explain Data Management processes for Files and Objects</li></ul>

## Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q65-Q70):

### NEW QUESTION # 65

Which two steps are required for enabling Data Lens? (Choose two.)

- A. In Prism, enable Pulse health monitoring.
- B. Add File Services VM admin credentials to a MyNutanix account.
- **C. Configure the Data Services IP in Prism Central.**
- D. Configure a MyNutanix account to access the Data Lens console-

**Answer: C**

Explanation:

The two steps that are required for enabling Data Lens are:

In Prism, enable Pulse health monitoring: Pulse is a feature that collects diagnostic and usage information from Nutanix clusters and services and sends it to Nutanix for analysis and support purposes. Pulse health monitoring is a feature that monitors the health status of Nutanix clusters and services and sends alerts to Nutanix if any issues are detected. To enable Data Lens, Pulse health monitoring must be enabled in Prism Element or Prism Central.

Configure the Data Services IP in Prism Central: Data Services IP is an IP address that is used for communication between Prism Central and Data Lens. Data Services IP must be configured in Prism Central before enabling Data Lens for any file server. Data Services IP must be routable from both Prism Central and Data Lens. Reference: Nutanix Files Administration Guide, page 93; Nutanix Data Lens Deployment Guide

### NEW QUESTION # 66

An administrator is tasked with deploying a Microsoft Server Failover Cluster for a critical application that uses shared storage. The failover cluster instance will consist of VMs running on an AHV-hosted cluster and bare metal servers for maximum resiliency. What should the administrator do to satisfy this requirement?

- A. Provision a new Storage Container.
- **B. Provision a Volume Group with Volume.**

- C. Create an SMB Share with Files.
- D. Create a Bucket with Objects.

**Answer: B**

Explanation:

Nutanix Volumes allows administrators to provision a volume group with one or more volumes that can be attached to multiple VMs or physical servers via iSCSI. This enables the creation of a Microsoft Server Failover Cluster that uses shared storage for a critical application. The volume group can be attached to VMs running on an AHV-hosted cluster and bare metal servers for maximum resiliency1. Reference: Nutanix Volumes Administration Guide1

#### NEW QUESTION # 67

An administrator created a bucket for an upcoming project where internal users as well as an outside consultant .... Object Browser. The administrator needs to provide both internal and consultant access to the same bucket.

The organization would like to prevent internal access to the consultant, based on their security policy.

Which two items are required to fulfill this requirement (Choose two.)

- A. Install third-party software for bucket access to all users.
- B. **Configure Directory Services under the Access Keys section**
- C. **Generate access keys based on directory and email-based users.**
- D. Generate access keys using third-party software.

**Answer: B,C**

Explanation:

Nutanix Objects supports directory services integration, which allows administrators to configure access keys based on directory and email-based users. This enables granular access control and security for buckets and objects. The administrator can configure directory services under the Access Keys section in Prism Central, and then generate access keys for internal users from the directory service and for the consultant from an email address2. Reference: Nutanix Objects Administration Guide2

#### NEW QUESTION # 68

Deploying Files instances require which two minimum resources? (Choose two)

- A. 8 vCPUs per host
- B. **8 GiB of memory per host**
- C. **4 vCPUs per host**
- D. 12 GiB of memory per host

**Answer: B,C**

Explanation:

The two minimum resources that are required for deploying Files instances are 8 GiB of memory per host and 4 vCPUs per host. Memory and vCPUs are resources that are allocated to VMs (Virtual Machines) to run applications and processes. Files instances are file server instances (FSIs) that run on FSVMs (File Server VMs) on a Nutanix cluster. FSVMs require at least 8 GiB of memory and 4 vCPUs per host to function properly and provide SMB and NFS access to file shares and exports. The administrator should ensure that there are enough memory and vCPUs available on each host before deploying Files instances. References: Nutanix Files Administration Guide, page 27; Nutanix Files Solution Guide, page 6

#### NEW QUESTION # 69

An administrator needs to enable a Nutanix feature that will ensure automatic client reconnection to shares whenever there are intermittent server-side networking issues and FSVM HA events. Which Files feature should the administrator enable?

- A. **Durable File Handles**
- B. Multi-Protocol Shares
- C. Connected Shares
- D. Persistent File Handles

**Answer: A**

#### Explanation:

Nutanix Files, part of Nutanix Unified Storage (NUS), provides file shares (e.g., SMB, NFS) that clients access. Intermittent server-side networking issues or FSVM High Availability (HA) events (e.g., an FSVM failover, as discussed in Question 40) can disrupt client connections. The administrator needs a feature to ensure automatic reconnection to shares during such events, minimizing disruption for users.

#### Analysis of Options:

\* Option A (Multi-Protocol Shares): Incorrect. Multi-Protocol Shares allow a share to be accessed via both SMB and NFS (as in Questions 8 and 60), but this feature does not address client reconnection during networking issues or FSVM HA events—it focuses on protocol support, not connection resilience.

\* Option B (Connected Shares): Incorrect. "Connected Shares" is not a recognized feature in Nutanix Files. It appears to be a made-up term and does not apply to automatic client reconnection.

\* Option C (Durable File Handles): Correct. Durable File Handles is an SMB feature in Nutanix Files (as noted in Question 19) that ensures automatic client reconnection after temporary server-side disruptions, such as networking issues or FSVM HA events (e.g., failover when an FSVM's IP is reassigned, as in Question 40). When enabled, Durable File Handles allow SMB clients to maintain their session state and automatically reconnect without user intervention, meeting the requirement.

\* Option D (Persistent File Handles): Incorrect. "Persistent File Handles" is not a standard feature in Nutanix Files. It may be confused with Durable File Handles (option C), which is the correct term for this SMB capability. Persistent File Handles is not a recognized Nutanix feature.

#### Why Option C?

Durable File Handles is an SMB 2.1+ feature supported by Nutanix Files that ensures clients can automatically reconnect to shares after server-side disruptions, such as intermittent networking issues or FSVM HA events (e.g., failover). This feature maintains the client's session state, allowing seamless reconnection without manual intervention, directly addressing the administrator's requirement.

Exact Extract from Nutanix Documentation:

From the Nutanix Files Administration Guide (available on the Nutanix Portal):

"Durable File Handles is an SMB feature in Nutanix Files that ensures automatic client reconnection to shares during server-side disruptions, such as intermittent networking issues or FSVM HA events. Enable Durable File Handles to maintain client session state and allow seamless reconnection without user intervention."

:

Nutanix Files Administration Guide, Version 4.0, Section: "SMB Features in Nutanix Files" (Nutanix Portal).

Nutanix Certified Professional - Unified Storage (NCP-US) Study Guide, Section: "Nutanix Files SMB Features".

## NEW QUESTION # 70

.....

There are more and more people to try their best to pass the NCP-US-6.5 exam, including many college students, a lot of workers, and even many housewives and so on. These people who want to pass the NCP-US-6.5 exam have regard the exam as the only one chance to improve themselves and make enormous progress. So they hope that they can be devoting all of their time to preparing for the NCP-US-6.5 Exam, but it is very obvious that a lot of people have not enough time to prepare for the important exam. Just like the old saying goes, the spirit is willing, but the flesh is weak.
