Pass Guaranteed Esri - EAEP2201 - Enterprise Administration Professional 2201 Perfect Exam Dumps Demo

What's more, part of that PassExamDumps EAEP2201 dumps now are free: https://drive.google.com/open?id=1azKn_SSpaMLeP1kQSd4sNRxCrZIg8_MI

The web-based EAEP2201 practice exam can be taken via the internet from any browser like Firefox, Safari, Opera, MS Edge, Internet Explorer, and Chrome. You don't need to install any excessive plugins and software to take this Esri EAEP2201 Practice Test. Windows, Mac, iOS, Android, and Linux support this Enterprise Administration Professional 2201 (EAEP2201) practice exam.

Esri EAEP2201 Certification is best suited for professionals who work as GIS administrators, consultants, and other enterprise managers who administer, operate, and implement enterprise-level Esri software solutions. The benefits of being an Esri Certified Enterprise Administration Professional are numerous. Firstly, Esri Certification validates that individuals have the required knowledge, skill set, and competency necessary to administer, manage, and implement Esri software solutions. Secondly, the certification enhances career advancement opportunities and professional credibility, showcasing technical proficiency and expertise in the industry.

First-Grade Esri Exam Dumps EAEP2201 Demo With Interarctive Test Engine & Useful EAEP2201 Official Study Guide

Many customers want to check the content and quality of our EAEP2201 exam braindumps. So we develped trial versions for you. After you have used a trial version, you will have an overview of the content of the EAEP2201 simulating exam. This is enough to convince you that this is a product with high quality. If you are sure that you want this product, but we are not sure which version to buy, we can let you try multiple versions of EAEP2201 learning guide. And there are three varied versions on our website.

Esri EAEP2201: Enterprise Administration Professional 2201 exam is designed to test a candidate's ability to manage ArcGIS Enterprise deployments. EAEP2201 exam covers a wide range of topics related to installation, configuration, security, and

performance tuning. It is intended for experienced GIS professionals who have a good understanding of ArcGIS Enterprise and IT concepts. Passing the exam is a significant achievement that can help professionals advance their careers and increase their earning potential.

The EAEP2201 Exam is suitable for GIS professionals who have experience in administering enterprise-level GIS systems, including IT administrators, GIS managers, and GIS analysts. It is also beneficial for individuals who want to increase their knowledge and skills in the administration of ArcGIS Enterprise environments.

Esri Enterprise Administration Professional 2201 Sample Questions (Q66-Q71):

NEW QUESTION # 66
A GIS administrator works for the Department of Transportation. Users need to analyzedecades of traffic and crash data to determine the interstates with the most incidents. They will also analyze when certain vehicles were speeding and braking, and then correlate this data with vehicular accident locations.
Which server must be configured to support this workflow?

- A. Notebook Server
- B. GeoEvent Server
- C. GeoAnalytics Server

Answer: C

Explanation:
ArcGIS GeoAnalytics Server is designed to perform distributed analysis on large volumes of spatial and temporal data. It is particularly suited for workflows that involve analyzing patterns over time and space, such as identifying interstates with the most incidents over decades and correlating vehicle behavior (like speeding and braking) with accident locations.
GeoAnalytics Server provides tools for aggregating data, detecting incidents, and reconstructing tracks, which are essential for understanding complex transportation datasets. Its distributed computing framework allows for efficient processing of big data, making it the appropriate choice for the described workflow.
GeoEvent Server (Option B) is primarily used for real-time data processing and event detection, which is not the focus of this analysis. Notebook Server (Option C) supports interactive data science and analysis workflows using Jupyter notebooks but does not provide the same level of performance and scalability for big data analysis as GeoAnalytics Server.
Reference Source:ArcGIS Enterprise documentation on GeoAnalytics Server capabilities and use cases.

NEW QUESTION # 67
An organization must limit the users who can publish services that reference data in a user-managed database.
At the same time, all users must be able to access and edit the data in that user-managed data store.
How should the database be registered?

- A. As an ArcGIS-managed data store in Server Manager
- B. As a relational data store in ArcGIS Data Store
- C. As a data store item in the ArcGIS Enterprise portal

Answer: C

Explanation:
Registering the database as a data store item in the ArcGIS Enterprise portal allows administrators to control who can publish services referencing the data. By sharing the data store item with specific groups or individuals, administrators can restrict publishing capabilities to authorized users. At the same time, all users can be granted appropriate permissions to access and edit the data directly in the user-managed database, independent of the publishing privileges.
Registering the database as an ArcGIS-managed data store in Server Manager does not provide the same level of control over publishing permissions. Registering it as a relational data store in ArcGIS Data Store is intended for managed data storage and does not apply to user-managed databases.
Reference Source:ArcGIS Enterprise documentation on registering user-managed data stores and controlling access.

NEW QUESTION # 68
A client has an internet-accessible ArcGIS Enterprise deployment with the Web Adaptors in theDMZ, and the remaining

components are on an internal network behind a firewall. A user on the internet must access a web map in that environment. Which ports must be open in the firewall between the DMZ and the internal network?

- A. 443 and 6443
- B. 2443 and 6443
- C. 80 and 443
- D. 6443 and 7443

Answer: D

Explanation:
Web Adaptors in the DMZ must forward requests to internal components (Portal and Server). These internal services operate over HTTPS via ports:
* 7443 for Portal for ArcGIS
* 6443 for ArcGIS Server
Therefore, the firewall must allow traffic over ports 6443 and 7443 from the Web Adaptors (DMZ) to the respective internal services.
From ArcGIS Enterprise security documentation:
"When using Web Adaptors in the DMZ, make sure ports 6443 and 7443 are open between the Web Adaptors and the internal ArcGIS Server and Portal components respectively."
* Option B is partially correct but leaves out Portal (7443).
* Option C is for HTTP/HTTPS access from the public, not internal communications.
* Option D includes the Data Store admin port (2443), which isn't required here.
Reference: ArcGIS Enterprise - Firewalls, Ports, and DMZ Configuration

NEW QUESTION # 69
A GIS administrator receives reports from users about a map service that is slow to draw. The service has the following characteristics:
* Numerous detailed features
* Complex symbology
* Scale-dependent rendering
* Infrequently updated
* Query capability enabled
* Uses shared instances
Which action should the administrator perform?

- A. Eliminate scale-dependent rendering
- B. Configure the map service to use cached tiles
- C. Use dedicated instances instead of shared instances

Answer: B

Explanation:
For map services that are infrequently updated and contain numerous detailed features with complex symbology, configuring the service to use cached tiles is the most effective way to improve drawing performance. Cached map services pre-render map images at various scales and store them, allowing for faster display to users. This approach is particularly beneficial when the data does not change frequently, as it reduces the server's processing load during user interactions.
Eliminating scale-dependent rendering (Option B) may lead to performance degradation, as it could result in rendering all features at all scales, increasing the amount of data processed and displayed unnecessarily.
Switching to dedicated instances (Option C) can improve performance in some scenarios, but it also increases resource usage on the server. Given that the service is infrequently updated and the primary concern is drawing performance, caching is the more efficient and scalable solution.
Reference Source: ArcGIS Enterprise documentation on optimizing map services for performance.

NEW QUESTION # 70
Users are reporting service timeouts and performance issues. The administrator notices that only the minimum number of instances are running during performance spikes. They want to monitor usage trends before adjusting instance settings.
Which action should the administrator perform?

- A. Monitor Task Manager on each ArcGIS Server machine
- B. Create a report of server statistics in ArcGIS Server Manager
- C. Change the log level to Debug in ArcGIS Server Manager
- D. Enable Windows Performance Monitor

Answer: B

Explanation:
To monitorusage patterns, including the number of requests and instances in use, ArcGIS Server provides statistics reportsin Server Manager. These reports showpeak and average service usage, helping administrators decide how toscale service instance counts.
From ArcGIS Server documentation:
"Use the ArcGIS Server Manager statistics reporting tool to monitor service usage trends over time. This data helps inform adjustments to instance counts."
* OptionAgives only raw system metrics, not service-specific insights.
* OptionB(Debug logs) causes overhead and isn't appropriate for monitoring trends.
