## Free PDF Quiz Fortinet - Reliable Reliable NSE6\_FSR-7.3 Test Dumps

Will you feel nervous in the exam? If you do, just choose us, our NSE6\_FSR-7.3 Soft test engine can stimulate the real exam environment, which will help you know the procedure of the exam, and will strengthen your confidence. Moreover NSE6\_FSR-7.3 exam dumps are high-quality, and we have professional experts to compile them, and they can help you pass the exam just one time. We offer you free demo to have a try for NSE6\_FSR-7.3 Exam Dumps, and free update for one year. If you indeed have

questions, just contact with us.

## Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q17-Q22):

### NEW QUESTION # 17

Which three actions can be performed from within the war room? (Choose three)

- A. Investigate issues by tagging results as evidence.
- B. View graphical representation of all records linked to an incident in the Artifacts lab
- C. Integrate a third-party instant messenger directly into the collaboration workspace.
- D. Use the Task Manager tab to create, manage, assign, and track tasks.
- E. Change the room's status to Escalated to enforce hourly updates.

**Answer: A,B,D**

Explanation:

In FortiSOAR's War Room, users can perform several actions to manage incidents effectively. They can view a graphical representation of records linked to an incident in the Artifacts lab, which helps visualize connections and dependencies. Additionally, the War Room supports tagging investigation results as evidence, allowing for a structured approach to incident documentation. Users can also manage tasks via the Task Manager tab, facilitating task creation, assignment, and tracking within the incident response workflow.

### NEW QUESTION # 18

Refer to the exhibit.

View the exhibit. The dataset on FortiSOAR has been trained to predict which record field?

- A. Status
- B. Playbooks
- C. Assigned To
- D. Severity

**Answer: D**

### NEW QUESTION # 19

Refer to the exhibit.

How long after the syops-ha service goes down will the heartbeat missed notification be sent to the administrator?

- A. 60 minutes
- B. 3 minutes
- C. 5 minutes
- D. 15 minutes

**Answer: A**

Explanation:

In FortiSOAR's high availability (HA) setup, if the cyops-ha service becomes unresponsive, the system is configured to send a "heartbeat missed" notification after a specified period, which in this case is 60 minutes. This delay allows for transient issues to be resolved without triggering immediate alerts, while also ensuring that administrators are informed of prolonged service disruptions. Timely notifications about the cyops-ha service's status help maintain the reliability and responsiveness of the HA environment.

### NEW QUESTION # 20

Which CLI command will not work when the PostgreSQL database on FortiSOAR is externalized?

- A. csadm ha export-conf
- B. csada ha firedrill
- C. csadm ha takeover
- D. csadmin ha show-health -all-nodes

**Answer: B**

Explanation:

When the PostgreSQL database is externalized in FortiSOAR, certain HA-related CLI commands become inapplicable. Specifically, the `esada ha firedrill` command, which is used to test the integrity of the HA cluster by simulating failures, is not applicable in scenarios where the database is managed outside FortiSOAR.

Externalizing the database changes how FortiSOAR manages database connections, making some internal commands like `firedrill` redundant.

#### NEW QUESTION # 21

Refer to the exhibit.

When importing modules to FortiSOAR using the configuration wizard, what actions are applied to fields if you select Merge with Existing as the Bulk action?

- A. Existing fields are overwritten, new fields are added, and non-Imported fields are kept.
- B. Existing fields are kept, new fields are added, and non-imported fields are kept.
- C. Existing fields are kept, new fields are added, and non-imported fields are deleted.
- D. Existing Holds are overwritten, now fields are added, and non-imported fields are deleted.

**Answer: A**

Explanation:

When importing modules into FortiSOAR using the configuration wizard and selecting "Merge with Existing" as the bulk action, the behavior for field handling is as follows: any fields that already exist in the system are overwritten with the imported values. New fields from the imported module are added to the system, while fields that are not part of the imported module remain unaffected and are retained in the system. This option ensures that existing data structures are updated with new information without losing existing, but non-imported, fields.

#### NEW QUESTION # 22

.....

Our NSE6\_FSR-7.3 study materials boost high passing rate ss more than 98% and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase to let you decide whether it is valuable or not by yourself. To further understand the merits and features of our NSE6\_FSR-7.3 Practice Engine you could free download the free demo of our NSE6\_FSR-7.3 exam questions, or visit our web page to know more related information. And you can pass your NSE6\_FSR-7.3 exam with the least time and energy with our wonderful NSE6\_FSR-7.3 exam questions.
