SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q80-Q85):

NEW QUESTION # 80

How does SAP Business Data Cloud support self-service analytics enablement?

Please choose the correct answer.

Response:

- A. By exposing business-friendly models to SAP Analytics Cloud
- B. By using SAP NetWeaver Gateway integration
- C. By offering static reports through scheduled email
- D. By embedding dashboards into Microsoft Excel

Answer: A

NEW QUESTION # 81

What features are supported by the SAP Analytics Cloud data analyzer? Note: There are 3 correct answers to this question.

- A. Conditional formatting
- B. Input controls
- C. Calculated measures
- D. Linked dimensions
- E. Charts

Answer: A,B,C

Explanation:

The SAP Analytics Cloud Data Analyzer is designed for ad-hoc data exploration and analysis, providing a focused environment for users to quickly derive insights. Among its key supported features are calculated measures, which allow users to create new metrics on the fly based on existing data, enabling deeper analysis without modifying the underlying model. Input controls are also supported, providing interactive filtering capabilities that allow users to dynamically adjust the data displayed based on specific criteria, enhancing the flexibility of their analysis. Furthermore, conditional formatting is a valuable feature that enables users to apply visual styling (e.g., colors, icons) to data points based on defined rules, making it easier to identify trends, outliers, or specific conditions at a glance. While charts and linked dimensions are integral to full stories, the Data Analyzer's strength lies in its immediate, flexible analytical capabilities for a single data source.

NEW QUESTION # 82

What are the styles of models?

There are 2 correct answers to this question.

Response:

- A. On-premise
- B. Analytic
- C. Live
- D. Planning

Answer: B,D

NEW QUESTION # 83

What are the benefits of using the Data Marketplace in SAP Business Data Cloud?

There are 2 correct answers to this question.

Response:

- A. Access to external data providers
- B. Enhanced data collaboration
- C. Built-in email marketing tools
- D. Automated data cleansing

Answer: A,B

NEW QUESTION # 84

Related to data management, what are some capabilities of SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- A. Harmonize customer business data across different Line of Business applications
- B. Store customer business data in 3rd party hyperscaler environments.
- C. Integrate and enrich customer business data for different analytics use cases.
- D. Delegate the integration of business data to partners and customers.

Answer: A,C

Explanation:

SAP Business Data Cloud (BDC) offers significant capabilities in data management, primarily focusing on creating a unified and actionable data foundation. Two key capabilities are to integrate and enrich customer business data for different analytics use cases. BDC pulls data from various SAP and non-SAP sources, allowing for consolidation and enhancement of this data to provide a comprehensive view for analytical purposes. This includes applying business context and semantic richness. Secondly, a critical capability is to harmonize customer business data across different Line of Business applications. BDC addresses the challenge of disparate data silos by creating a consistent data model and definitions across various operational systems (e.g., ERP, CRM, HR), ensuring that data is understood and used uniformly across the enterprise. While BDC leverages hyperscaler environments, "storing data" is a characteristic of its infrastructure, not a direct capability of data management provided by BDC itself. Delegating integration is an operational choice, not a core capability of the platform.
