1Z0-083 Guide Braindumps Is Typically Beneficial for 1Z0-083 Exam - PDF4Test

Our company abides by the industry norm all the time. By virtue of the help from professional experts, who are conversant with the regular exam questions of our latest 1Z0-083 exam torrent we are dependable just like our 1Z0-083 test prep. They can satisfy your knowledge-thirsty minds. And our 1Z0-083 Quiz torrent is quality guaranteed. By devoting ourselves to providing high-quality practice materials to our customers all these years we can guarantee all content is of the essential part to practice and remember.

Oracle Database Administration II Sample Questions (Q143-Q148):

NEW QUESTION # 143

Which three are true about Automatic Workload Repository (AWR)?

- A. The taking of AWR snapshots can be disabled.
- B. Its collection level is determined by the value of the `statistics_level` database parameter.

- C. By default, AWR snapshots are retained for 7 days.
- D. AWR data is stored in the system tablespace.
- E. By default, AWR snapshots are taken every 60 minutes.

Answer: A,B,E

NEW QUESTION # 144

Choose three. Which three are true about block media recovery?

- A. A block being recovered is not accessible.
- B. To use it, Flashback Database must be enabled.
- C. The data file containing the block being recovered remains online.
- D. The target database for which one or more blocks are to be recovered must be in the OPEN state.
- E. It can be performed on noncorrupt blocks.
- F. It cannot repair logical corruption.

Answer: A,C,F

NEW QUESTION # 145

Choose the best answer You want to create a duplicate database DUP_DB from your production database PROD on the same host. The PROD database uses Automatic Storage Management (ASM) for storage. Regular backups are taken using RMAN connected to a recovery catalog. You create an auxiliary instance and want to execute the command: RMAN> DUPLICATE TARGET DATABASE TO dup_db FROM ACTIVE DATABASE; What is a prerequisite for the successful execution of this command

- A. Flashback must be enabled for the PROD database.
- B. The target database must be in MOUNT state.
- C. RMAN must be connected to the target database instance and the auxiliary instance.
- D. A most recent backup set of the PROD database must exist.

Answer: C

NEW QUESTION # 146

Which two are true about backup set compression using RMAN default compression? (Choose two.)

- A. Binary compression adds CPU overhead to backup operations.
- B. Unused blocks below the high water mark are backed up.
- C. Compressed backups can be written only to media.
- D. Compression can be done only for locally managed tablespaces.
- E. Compressed backups cannot have a section size defined.

Answer: A,D

Explanation:

Backup as compressed backupset device type disk database section size 100m; (not A, not D).

If they speak about Unused block compression then :

RMAN skips reading, and backing up, any database blocks that are not currently allocated to some database object. This is regardless of whether those blocks had previously been allocated (below HWM). (Not C) Data file has to be locally managed. (E)

NEW QUESTION # 147

Examine this configuration:

1. The ORCL database data files are in Automatic Storage Management (Oracle ASM) disk group +DATA.
2. ORCL uses disk group +FRA for the Fast Recovery Area.
3. LISTENER is the listener for ORCL.
4. The database, listener, ASM instance, and ASM disk groups are managed by Oracle Restart.
5. All components are currently shut down.
