### Snowflake SnowPro Advanced Administrator ADA-C02 Sample Questions (Q13-Q18):

#### NEW QUESTION # 13

A retailer uses a TRANSACTIONS table (100M rows, 1.2 TB) that has been clustered by the STORE\_ID column (varchar(50)). The vast majority of analyses on this table are grouped by STORE\_ID to look at store performance.

There are 1000 stores operated by the retailer but most sales come from only 20 stores. The Administrator notes that most queries are currently experiencing poor pruning, with large amounts of bytes processed by even simple queries.

Why is this occurring?

- A. The STORE\_ID should be numeric.
- **B. Sales across stores are not uniformly distributed.**
- C. The cardinality of the stores to transaction count ratio is too low to use the STORE\_ID as a clustering key.
- D. The table is not big enough to take advantage of the clustering key.

**Answer: B**

Explanation:

Clustering is effective when data distribution across the clustering key is relatively uniform. In this case, most transactions are

concentrated in only 20 of the 1000 stores, leading to skewed data distribution. This imbalance causes poor pruning, since large portions of micro-partitions still need to be scanned, even for queries targeting specific stores.

#### NEW QUESTION # 14

When adding secure views to a share in Snowflake, which function is needed to authorize users from another account to access rows in a base table?

- A. CURRENT CLIENT
- B. CURRENT USER
- C. CURRENT ROLE
- **D. CURRENT ACCOUNT**

**Answer: D**

Explanation:

When building secure views for data sharing, the CURRENT\_ACCOUNT function is used to identify and authorize the consuming account. This ensures that row-level security can be enforced per consumer account accessing the shared data.

#### NEW QUESTION # 15

Company A uses Snowflake to manage audio files of call recordings. Company A hired Company B, who also uses Snowflake, to transcribe the audio files for further analysis.

Company A's Administrator created a share.

What object should be added to the share to allow Company B access to the files?

- **A. A secure view with a column for the stage name and a column for the file path.**
- B. A secure view with a column for METADATA\$FILENAME.
- C. A secure view with a column for pre-signed URLs.
- D. A secure view with a column for file URLs.

**Answer: A**

Explanation:

Sharing a secure view with a column for the stage name and a column for the file path allows Company B to access the referenced files through Snowflake's external or internal stage, without exposing direct URLs. This maintains security and supports seamless access for the recipient.

#### NEW QUESTION # 16

What steps are required to set up OKTAAPI token integration in Snowflake?

- A. create or replace security integration okta\_provisioning  
type = scim  
scim\_client = 'okta'  
run\_as\_role = 'OKTA PROVISIONER';  
Update this step every 6 months.
- B. use role ACCOUNTADMIN;  
select system\$ generate\_scim\_access\_token ('OKTA PROVISIONING');  
Update these steps every 12 months.
- **C. use role ACCOUNTADMIN;  
select system\$ generate\_scim\_access\_token ('OKTA PROVISIONING');  
Update these steps every 6 months.**
- D. grant role okta\_provisioner to role ACCOUNTADMIN;  
create or replace security integration okta\_provisioning  
type = scim  
scim\_client = 'okta'  
run\_as\_role = 'OKTA PROVISIONER';  
Update these steps every 12 months.

**Answer: C**

Explanation:

Use the ACCOUNTADMIN role to generate the SCIM access token for Okta with system\$generate\_scim\_access\_token. The access token must be regenerated and updated in Okta every 6 months for continued integration.

### NEW QUESTION # 17

In which scenario will use of an external table simplify a data pipeline?

- A. When continuously writing data from a Snowflake table to external storage
- B. When accessing a Snowflake table from an external database within the same region
- C. When accessing a Snowflake table that references data files located in cloud storage
- D. When accessing a Snowflake table from a relational database

**Answer: C**

Explanation:

External tables in Snowflake are specifically designed to reference and query data files located in external cloud storage. This simplifies data pipelines by allowing direct SQL access to external data without the need for loading it into Snowflake.
