## Dumps Splunk SPLK-4001 Download, New SPLK-4001 Study Guide

Our Splunk O11y Cloud Certified Metrics User exam tool can support almost any electronic device, from iPod, telephone, to computer and so on. You can use Our SPLK-4001 test torrent by your telephone when you are travelling far from home; I think it will be very convenient for you. You can also choose to use our SPLK-4001 study materials by your computer when you are at home. You just need to download the online version of our SPLK-4001 study materials, which is not limited to any electronic device and support all electronic equipment in anywhere and anytime. At the same time, the online version of our Splunk O11y Cloud Certified Metrics User exam tool will offer you the services for working in an offline states, I believe it will help you solve the problem of no internet. If you would like to try our SPLK-4001 Test Torrent, I can promise that you will improve yourself and make progress beyond your imagination.

Splunk SPLK-4001: Splunk O11y Cloud Certified Metrics User exam is a certification exam that assesses the knowledge and skills of individuals in working with metrics data in the Splunk platform. SPLK-4001 Exam is designed to validate the skills of individuals who are responsible for monitoring and analyzing metrics data in Splunk Cloud environments. Splunk O11y Cloud Certified Metrics User certification is ideal for individuals who want to demonstrate their expertise in using the Splunk platform for monitoring and analyzing metrics data.

## Splunk O11y Cloud Certified Metrics User Sample Questions (Q35-Q40):

### NEW QUESTION # 35

For a high-resolution metric, what is the highest possible native resolution of the metric?

- A. 5 seconds
- B. 2 seconds
- C. 15 seconds
- D. 1 second

**Answer: D**

Explanation:

Explanation

The correct answer is C. 1 second.

According to the Splunk Test Blueprint - O11y Cloud Metrics User document<sup>1</sup>, one of the metrics concepts that is covered in the exam is data resolution and rollups. Data resolution refers to the granularity of the metric data points, and rollups are the process of aggregating data points over time to reduce the amount of data stored.

The Splunk O11y Cloud Certified Metrics User Track document<sup>2</sup> states that one of the recommended courses for preparing for the exam is Introduction to Splunk Infrastructure Monitoring, which covers the basics of metrics monitoring and visualization.

In the Introduction to Splunk Infrastructure Monitoring course, there is a section on Data Resolution and Rollups, which explains that Splunk Observability Cloud collects high-resolution metrics at 1-second intervals by default, and then applies rollups to reduce the data volume over time. The document also provides a table that shows the different rollup intervals and retention periods for different resolutions.

Therefore, based on these documents, we can conclude that for a high-resolution metric, the highest possible native resolution of the metric is 1 second.

### NEW QUESTION # 36

A user wants to add a link to an existing dashboard from an alert. When they click the dimension value in the alert message, they are taken to the dashboard keeping the context. How can this be accomplished? (select all that apply)

- A. Add a link to the Runbook URL.
- B. Add the link to the alert message body.
- C. Build a global data link.
- D. Add a link to the field.

**Answer: C,D**

Explanation:

Explanation

The possible ways to add a link to an existing dashboard from an alert are:

Build a global data link. A global data link is a feature that allows you to create a link from any dimension value in any chart or table to a dashboard of your choice. You can specify the source and target dashboards, the dimension name and value, and the query parameters to pass along. When you click on the dimension value in the alert message, you will be taken to the dashboard with the context preserved<sup>1</sup> Add a link to the field. A field link is a feature that allows you to create a link from any field value in any search result or alert message to a dashboard of your choice. You can specify the field name and value, the dashboard name and ID, and the query parameters to pass along. When you click on the field value in the alert message, you will be taken to the dashboard with the context preserved<sup>2</sup> Therefore, the correct answer is A and C.

To learn more about how to use global data links and field links in Splunk Observability Cloud, you can refer to these documentations<sup>1,2</sup>.

1: <https://docs.splunk.com/Observability/gdi/metrics/charts.html#Global-data-links> 2:

<https://docs.splunk.com/Observability/gdi/metrics/search.html#Field-links>

### NEW QUESTION # 37

The alert recipients tab specifies where notification messages should be sent when alerts are triggered or cleared. Which of the below options can be used? (select all that apply)

- A. Invoke a webhook URL.
- B. Export to CSV.
- C. Send an SMS message.
- D. Send to email addresses.

**Answer: A,C,D**

Explanation:

The alert recipients tab specifies where notification messages should be sent when alerts are triggered or cleared. The options that can be used are:

Invoke a webhook URL. This option allows you to send a HTTP POST request to a custom URL that can perform various actions based on the alert information. For example, you can use a webhook to create a ticket in a service desk system, post a message to a chat channel, or trigger another workflow1 Send an SMS message. This option allows you to send a text message to one or more phone numbers when an alert is triggered or cleared. You can customize the message content and format using variables and templates2 Send to email addresses. This option allows you to send an email notification to one or more recipients when an alert is triggered or cleared. You can customize the email subject, body, and attachments using variables and templates. You can also include information from search results, the search job, and alert triggering in the email3 Therefore, the correct answer is A, C, and D.

1: <https://docs.splunk.com/Documentation/Splunk/latest/Alert/Webhooks> 2:

<https://docs.splunk.com/Documentation/Splunk/latest/Alert/SMSnotification> 3:

<https://docs.splunk.com/Documentation/Splunk/latest/Alert/Emailnotification>

### NEW QUESTION # 38

An SRE creates an event feed chart in a dashboard that shows a list of events that meet criteria they specify.

Which of the following should they include? (select all that apply)

- A. Events created when a detector clears an alert.
- B. Events created when a detector triggers an alert.
- C. Random alerts from active detectors.
- D. Custom events that have been sent in from an external source.

**Answer: A,B,D**

Explanation:

Explanation

According to the web search results1, an event feed chart is a type of chart that shows a list of events that meet criteria you specify. An event feed chart can display one or more event types depending on how you specify the criteria. The event types that you can include in an event feed chart are:

Custom events that have been sent in from an external source: These are events that you have created or received from a third-party service or tool, such as AWS CloudWatch, GitHub, Jenkins, or PagerDuty.

You can send custom events to Splunk Observability Cloud using the API or the Event Ingest Service.

Events created when a detector triggers or clears an alert: These are events that are automatically generated by Splunk Observability Cloud when a detector evaluates a metric or dimension and finds that it meets the alert condition or returns to normal. You can create detectors to monitor and alert on various metrics and dimensions using the UI or the API.

Therefore, option A, B, and D are correct.

### NEW QUESTION # 39

Which analytic function can be used to discover peak page visits for a site over the last day?

- A. Count: (Id)
- B. Lag: (24h)
- C. Maximum: Transformation (24h)
- D. Maximum: Aggregation (Id)

**Answer: C**

Explanation:

According to the Splunk Observability Cloud documentation1, the maximum function is an analytic function that returns the highest value of a metric or a dimension over a specified time interval. The maximum function can be used as a transformation or an aggregation. A transformation applies the function to each metric time series (MTS) individually, while an aggregation applies the function to all MTS and returns a single value. For example, to discover the peak page visits for a site over the last day, you can use the following SignalFlow code:

```
maximum(24h, counters("page.visits"))
```

This will return the highest value of the page.visits counter metric for each MTS over the last 24 hours. You can then use a chart to visualize the results and identify the peak page visits for each MTS.
