### NEW QUESTION # 44

In SAP Business AI, what are some safeguards for protecting customer data? Note: There are 3 correct answers to this question.

- A. SAP-hosted AI infrastructure
- B. Tenant isolation
- C. Clean core maintenance
- D. Consent-based model training

**Answer: A,B,D**

Explanation:

SAP Business AI incorporates robust safeguards to protect customer data, ensuring privacy and compliance. The consent-based model training approach ensures that AI models are trained only on data for which explicit user consent has been obtained, aligning with global data protection regulations such as GDPR. This minimizes the risk of unauthorized data usage. SAP-hosted AI infrastructure provides a secure environment where data is processed within SAP's controlled, enterprise-grade cloud infrastructure, reducing exposure to external vulnerabilities. Tenant isolation ensures that each customer's data is stored and processed in a dedicated environment, preventing cross-tenant data leakage and enhancing security. These measures collectively uphold SAP's commitment to data privacy and security, as outlined in the SAP Business AI documentation. Clean core maintenance, while important for system efficiency, is not directly related to data protection. Sustainability is not a safeguard for customer data.
