

# Professional-Cloud-Developer Pass4sure Dumps & Professional-Cloud-Developer Sichere Praxis Dumps

P.S. Kostenlose 2026 Google Professional-Cloud-Developer Prüfungsfragen sind auf Google Drive freigegeben von ZertSoft verfügbar: <https://drive.google.com/open?id=1MsalHhu4GmstwrXSR36xo1i4QgjX89W8>

Wir sollen die Schwierigkeiten ganz gelassen behandeln. Obwohl die Google Professional-Cloud-Developer Zertifizierungsprüfung ganz schwierig ist, sollen die Kandidaten alle Schwierigkeiten ganz gelassen behandeln. Denn ZertSoft wird Ihnen helfen, die Google Professional-Cloud-Developer Zertifizierungsprüfung zu bestehen. Mit ihm brauchen wir uns nicht zu fürchten und nicht verwirrt zu sein. Die Schulungsunterlagen zur Google Professional-Cloud-Developer Zertifizierungsprüfung von ZertSoft sind den Kandidaten die beste Methode.

## Google Professional-Cloud-Developer Exam Syllabus Topics:

| Section                                    | Weight | Objectives                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1: Building and testing applications | 23%    | <ul style="list-style-type: none"> <li>- Testing applications <ul style="list-style-type: none"> <li>• 1. Writing unit, integration, and end-to-end tests</li> <li>• 2. Using AI-assisted development tools</li> <li>• 3. ## Professional-Cloud-Developer Lernhilfe & Professional-Cloud-Developer Schulungsunterlagen

Ich kann mein Leben und Arbeit jetzt nicht ertragen. Ich hoffe auf eine andere bessere Arbeit. Sind Sie der ähnlichen Meinung?

Aber, wie kann ich bessere Arbeit bekommen? Lieben Sie IT? Wollen Sie durch IT-Zertifizierungsprüfungen Ihre Fähigkeit beweisen? Wenn ja, nehmen Sie vielleicht an den IT-Zertifizierungsprüfungen teil. Es ist sehr wichtig, Professional-Cloud-Developer Zertifizierung zu bekommen, wenn Sie großen Erfolg in diesem Bereich machen wollen. Damit können Sie neue Chancen für Ihre Karriere schaffen. Wissen Sie Google Professional-Cloud-Developer Prüfung? Die Professional-Cloud-Developer Zertifizierung kann es erleichtern, dass Sie einen Job finden wollen. Aber fühlen Sie es sehr schwierig, die Professional-Cloud-Developer Prüfung zu bestehen? Es macht nichts, weil Sie die Professional-Cloud-Developer Prüfungsmaterialien von ZertSoft benutzen können.

## Google Certified Professional - Cloud Developer Professional-Cloud-Developer Prüfungsfragen mit Lösungen (Q287-Q292):

### 287. Frage

You recently developed a new application. You want to deploy the application on Cloud Run without a Dockerfile. Your organization requires that all container images are pushed to a centrally managed container repository. How should you build your container using Google Cloud services? (Choose two.)

- A. Include the `--source` flag with the `gcloud run deploy` CLI command.
- B. Submit a Cloud Build job to push the image.
- C. Push your source code to Artifact Registry.
- D. Use the `pack build` command with `pack CLI`.
- E. Include the `--platform=kubernetes` flag with the `gcloud run deploy` CLI command.

Antwort: C,D

Begründung:

Explanation

<https://cloud.google.com/run/docs/deploying#images>

<https://cloud.google.com/blog/products/containers-kubernetes/google-cloud-now-supports-buildpacks>

### 288. Frage

You are using Cloud Build for your CI/CD pipeline to complete several tasks, including copying certain files to Compute Engine virtual machines. Your pipeline requires a flat file that is generated in one builder in the pipeline to be accessible by subsequent builders in the same pipeline. How should you store the file so that all the builders in the pipeline can access it?

- A. Add a build argument that runs an HTTP POST via `curl` to a separate web server to persist the value in one builder. Use an HTTP GET via `curl` from the subsequent build step to read the value.
- B. Use `gsutil` to output the file contents to a Cloud Storage object. Read from the same object in the subsequent build step.
- C. Output the file contents to a file in `/workspace`. Read from the same `/workspace` file in the subsequent build step.
- D. Store and retrieve the file contents using Compute Engine instance metadata.

Antwort: C

Begründung:

<https://cloud.google.com/build/docs/build-config-file-schema>

### 289. Frage

You are developing an application that uses microservices architecture that includes Cloud Run, Bigtable, and Pub/Sub. You want to conduct the testing and debugging process as quickly as possible to create a minimally viable product with minimal cost. What should you do?

- A. Use Cloud Shell Editor and Cloud Shell to deploy the application, and test the functionality by using the Google Cloud console in the project.
- B. Use emulators to test the functionality of cloud resources locally, and deploy the code to your Google Cloud project.
- C. Use Cloud Build to create a pipeline, and add the unit testing stage and the manual approval stage. Deploy the code to your Google Cloud project.
- D. Use Cloud Code to develop, deploy, and test microservices resources. Use Cloud Logging to review the resource logs.

Antwort: D

Begründung:

### 290. Frage

You are trying to connect to your Google Kubernetes Engine (GKE) cluster using kubectl from Cloud Shell.

You have deployed your GKE cluster with a public endpoint. From Cloud Shell, you run the following command:

```
gcloud container clusters get-credentials <cluster-name> \
--zone <zone> --project <project-name> \
```

You notice that the kubectl commands time out without returning an error message. What is the most likely cause of this issue?

- A. Your Cloud Shell external IP address is not part of the authorized networks of the cluster.
- B. Your user account does not have privileges to interact with the cluster using kubectl.
- C. A VPC firewall is blocking access to the cluster's endpoint.
- D. The Cloud Shell is not part of the same VPC as the GKE cluster.

**Antwort: A**

Begründung:

[https://cloud.google.com/kubernetes-engine/docs/how-to/private-clusters#cloud\\_shell](https://cloud.google.com/kubernetes-engine/docs/how-to/private-clusters#cloud_shell) If you want to use Cloud Shell to access the cluster, you must add the public IP address of your Cloud Shell to the cluster's list of authorized networks.

### 291. Frage

You have an application in production. It is deployed on Compute Engine virtual machine instances controlled by a managed instance group. Traffic is routed to the instances via a HTTP(s) load balancer. Your users are unable to access your application. You want to implement a monitoring technique to alert you when the application is unavailable.

Which technique should you choose?

- A. Managed instance group - health checks
- B. Smoke tests
- C. Stackdriver uptime checks
- D. Cloud Load Balancing - health checks

**Antwort: C**

Begründung:

<https://cloud.google.com/monitoring/uptime-checks>

An uptime check is a request sent to a resource to see if it responds. You can use uptime checks to determine the availability of a VM instance, an App Engine service, a URL, or an AWS load balancer.

### 292. Frage

.....

Die Senior Experten haben die online Prüfungsfragen zur Google Professional-Cloud-Developer Zertifizierungsprüfung nach ihren Kenntnissen und Erfahrungen bearbeitet, deren Ähnlichkeit mit den realen Prüfungen 95% beträgt. Ich habe Vertrauen in unsere Produkte. Wenn Sie die Produkte von ZertSoft kaufen, wird ZertSoft Ihnen helfen, die Google Professional-Cloud-Developer Zertifizierungsprüfung einmalig zu bestehen. Sonst erstatteten wir Ihnen gesammte Einkaufgebühren.
