Oracle Cloud Infrastructure 2025 AI Foundations Associate Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which is NOT a capability of OCI Vision's image analysis?

- A. Translating text in images to another language
- B. Object detection with bounding boxes
- C. Locating and extracting text in images
- D. Assigning classification labels to images

Answer: A

Explanation:

OCI Vision's image analysis capabilities include locating and extracting text from images, assigning classification labels to images, and detecting objects with bounding boxes. However, translating text in images to another language is not a capability of OCI Vision's image analysis. This functionality typically requires an additional layer of processing, such as integration with a language translation service, which is beyond the scope of OCI Vision's core image analysis features.

NEW QUESTION # 33

What would you use Oracle AI Vector Search for?

- A. Query data based on semantics.
- B. Store business data in a cloud database.
- C. Manage database security protocols.
- D. Query data based on keywords.

Answer: A

Explanation:

Oracle AI Vector Search is designed to query data based on semantics rather than just keywords. This allows for more nuanced and contextually relevant searches by understanding the meaning behind the words used in a query. Vector search represents data in a high-dimensional vector space, where semantically similar items are placed closer together. This capability makes it particularly powerful for applications such as recommendation systems, natural language processing, and information retrieval where the meaning and context of the data are crucial.

NEW QUESTION # 34

What is the primary benefit of using Oracle Cloud Infrastructure Supercluster for AI workloads?

- A. It is ideal for tasks such as text-to-speech conversion.
- B. It delivers exceptional performance and scalability for complex AI tasks.
- C. It provides a cost-effective solution for simple AI tasks.
- D. It offers seamless integration with social media platforms.

Answer: B

Explanation:

Oracle Cloud Infrastructure Supercluster is designed to deliver exceptional performance and scalability for complex AI tasks. The primary benefit of this infrastructure is its ability to handle demanding AI workloads, offering high-performance computing (HPC) capabilities that are crucial for training large-scale AI models and processing massive datasets. The architecture of the Supercluster ensures low-latency networking, efficient resource allocation, and high-throughput processing, making it ideal for AI tasks that require significant computational power, such as deep learning, data analytics, and large-scale simulations.

NEW QUESTION # 35

In machine learning, what does the term "model training" mean?

- A. Analyzing the accuracy of a trained model
- B. Establishing a relationship between input features and output
- C. Writing code for the entire program
- D. Performing data analysis on collected and labeled data

Answer: B

Explanation:

In machine learning, "model training" refers to the process of teaching a model to make predictions or decisions by learning the relationships between input features and the corresponding output. During training, the model is fed a large dataset where the inputs are paired with known outputs (labels). The model adjusts its internal parameters to minimize the error between its predictions and the actual outputs. Over time, the model learns to generalize from the training data to make accurate predictions on new, unseen data.

NEW QUESTION # 36

Which AI domain is associated with tasks such as identifying the sentiment of text and translating text between languages?

- A. Anomaly Detection
- B. Natural Language Processing
- C. Computer Vision
- D. Natural Language Processing

Answer: D

Explanation:

Natural Language Processing (NLP) is the AI domain associated with tasks such as identifying the sentiment of text and translating text between languages. NLP focuses on enabling machines to understand, interpret, and generate human language in a way that is both meaningful and useful. This domain covers a wide range of applications, including text classification, language translation, sentiment analysis, and more, all of which involve processing and analyzing natural language data.
